Introduction	xi
Chapter 1. The Gradual Decline of Biodiversity: What Do We Mean?	1
1.1. The context of the debate	2
1.2. “Biodiversity”? A vague concept.	3
1.3. The origins of a concept: creationist thinking	4
1.4. Decline: clarifying the meaning of the words	6
1.5. Are the indicators reliable?	8
1.6. Protecting what?	10
1.7. The evolution of the concept of decline: from a structural to a functional approach.	11
1.8. Communication or misinformation?	13
1.9. At the roots of the sixth extinction	14
Chapter 2. The Promethean Dream: Taking Stock of Biodiversity	17
2.1. The notion of species is misleading!	17
2.2. Hidden biodiversity: cryptic or twin species	20
2.3. Species at the service of genes?	21
2.4. Species inventory: what do we know?	22
2.5. The geographical distribution of biological diversity.	23
2.6. In summary.	25
Chapter 3. What Can We Learn from the Great Extinctions of the Past?	27
3.1. A hundred times over, put your work back together	27
3.2. The great mass extinctions	28
3.3. The tree that hides the forest	31

3.4. Evolutionary consequences of extinctions	33
3.5. What is known about the post-extinction processes of the past?	35
3.6. In summary	35
Chapter 4. Biodiversity Decline: “The Worst Is Not Certain”	37
4.1. When scientists cross the yellow line!	37
4.2. The risk of extinction	40
4.2.1. Endemic species	40
4.2.2. Specialist species	42
4.2.3. Ubiquitous or opportunistic species	42
4.3. Vulnerability of species to risks	42
4.4. Species extinctions in the plant world	44
4.5. What do we know about species extinctions in animals?	46
4.6. Species extinctions in France	47
4.7. The false trails of globalization: contextualizing erosion!	51
4.8. In summary	53
Chapter 5. Let’s Talk about the Renewal Rate of Biological Diversity	55
5.1. Extinction debt and speciation credit	55
5.2. Speciation processes	57
5.3. The speed of appearance of new species	58
5.4. Is speciation more important in tropical environments?	62
5.5. Evolution and the role of chance	63
5.6. Is habitat fragmentation a threat to biodiversity?	64
5.7. In summary	66
Chapter 6. Controversies Surrounding the Extinction Rate	67
6.1. The laborious calculation of the extinction rate	68
6.2. The area/species relationship: a highly criticized prospective tool!	71
6.3. Text commentary on the extinction rate of species according to the Sagascience website	74
6.4. A debate confused by ideological concerns	76
6.5. In summary	78
Chapter 7. The Hidden Face of Methods for Assessing Biodiversity Decline	81
7.1. Who can be trusted to analyze the data?	82
7.2. Questions about the “species” metric	83
7.3. Amalgamation and false leads	84
7.4. Contingency and the problem of changes in scale: global versus local	85
7.5. Losers, but also winners?	86

7.6. Manipulating figures: communication or hijacking?	88
7.7. The health sector taken hostage	89
Chapter 8. Biodiversity and the Functioning of Ecosystems: A Multitude of Preconceived Ideas	91
8.1. The black box of ecological functioning.	91
8.2. The balance of nature is fiction.	92
8.3. Disruption does not mean disaster	94
8.4. Are all species needed?	95
8.5. Deterministic or stochastic ecological systems?	96
8.6. The more species there are, the more resilient the ecological system is.	97
8.7. The threshold effect or the fall of a paradigm!	98
8.8. Species substitutions and the functioning of ecological systems	99
8.9. In summary.	100
Chapter 9. Species Introductions: For Better or For Worse	101
9.1. The delicate issue of indigeneness.	102
9.2. Species introductions: one of the main causes of biodiversity loss?.	104
9.3. Species introductions and ecosystem functioning.	106
9.4. Why are our trees sick?	107
9.5. Can introductions be controlled?	109
9.5.1. The case of climate migrants.	110
9.5.2. Stowaways.	110
9.5.3. Voluntary or accidental introductions.	111
9.5.4. Lack of courtesy	112
9.6. Being pragmatic?	112
9.7. Strongly divergent opinions among scientists.	114
9.8. In summary.	115
Chapter 10. Global Warming: A Catastrophe for Biodiversity?	117
10.1. Climate uncertainties.	119
10.2. The lessons of retrospective ecology	121
10.3. Likely consequences of reduced precipitation	123
10.4. Likely impacts of temperature increase on biodiversity.	123
10.5. Rising sea levels	125
10.6. Undergoing or going along with change?	126
10.7. In summary	127
Chapter 11. Is Planning Destroying Biodiversity?	129
11.1. European nature: a reconstructed nature	130
11.2. “Degraded” ecological systems... really?	131

11.3. When you transform, you lose and you win....	132
11.4. Paradox: destroying biodiversity under the pretext of naturalness	134
11.5. A brief saga of French forests	136
11.6. In summary	139
Chapter 12. The Decline of Insects	141
12.1. The decline of insect populations creates the event	141
12.2. Is the apocalypse coming?	145
12.3. The difficulty of identifying the causes.	146
12.4. Speculation on possible causes	147
12.4.1. Light pollution.	148
12.4.2. Pesticides.	148
12.4.3. Diseases	149
12.4.4. Changes in agricultural practices.	150
12.5. What is the impact on agriculture?	150
12.6. The case of bees	151
12.7. The case of butterflies	153
12.8. Some remarks on our relationship with insects	156
12.9. In summary	157
Chapter 13. The Decline of Birds	159
13.1. The red list of threatened species	159
13.2. The decline of bird populations... as early as the 19th century	160
13.3. Monitoring of the STOC program	163
13.4. Focus on the farmland bird guild	164
13.4.1. Different trends for different species	164
13.4.2. Disparities between regions are a cause for concern	166
13.4.3. A general decline across Europe	169
13.5. The habitat trail.	173
13.6. Many other causes	175
13.7. The role of reserves	177
13.8. On what basis can we talk about decline?	179
13.9. Let nature take its course?	179
13.10. In summary	182
Chapter 14. Reasons to be Positive	183
14.1. Highly resilient ecological systems	183
14.1.1. Oil spills	184
14.1.2. Fires.	184
14.1.3. How long does it take for a tropical forest to regenerate?	186
14.1.4. Pollution of continental aquatic systems.	186

14.2. Recovering populations!	187
14.3. Nature conquers the city	191
14.3.1. Reducing pollution	193
14.3.2. “Rewilding” the city?	193
14.4. Rehabilitation of “degraded” systems	194
14.4.1. Water quarries	194
14.4.2. Slag heaps	195
14.5. What is the future for anthropized nature, left to its own devices?	195
14.6. Let’s talk about the wolf.	196
14.7. In summary	198
Chapter 15. From Facts to Extrapolations	199
15.1. Many inconsistencies and post-truths.	201
15.2. Going beyond ecocentrism: what kinds of nature do we want?	203
15.3. Protected areas and the return of colonialism?	205
15.4. Nature, an inexhaustible source of problems.	207
15.5. Single-mindedness and anxiety-provoking communication	208
15.6. The business of biodiversity.	209
