Preface	xiii
Introduction	xv
Chapter 1. From the Philosophy of Trace to Digital Traces	1
1.1. Trace as a “ <i>vestige</i> ” and an “ <i>imprint</i> ”	1
1.2. Trace and imprint with the value of an index and sign	5
1.3. Trace for Heidegger, Levinas and Derrida	11
1.4. Critical analysis of the concept of “digital trace”	16
Chapter 2. Formalism Associated with Algorithmic Projections	23
2.1. Projective formalism	24
2.1.1. An operator’s algorithmic S-projection	31
2.1.2. An individual’s global algorithmic projection	33
2.1.3. Big data and bases for algorithmic projection	35
2.1.4. Some examples of algorithmic projections	36
2.1.5. The volumes of an algorithmic projection	38
2.2. E-reputation and algorithmic projections	39
2.2.1. Digital reputation	39
2.2.2. Brief history of e-reputation.	39
2.2.3. An operator’s systemic approach to e-reputation	41
2.3. Competition, hacking and algorithmic projections	43
2.3.1. Competition, duels and algorithmic projections	43

2.4. The stakes for a projective data approach	44
2.4.1. Structuring massive data using the projective formalism	44
Chapter 3. Connected Objects, a Location's Ubiquity Level and the User's Algorithmic Consent	49
3.1. The exponential evolution of connected objects for 2020.	50
3.2. Projective formalism applied to connected objects.	53
3.3. A location's ubiquity level	55
3.4. An individual's algorithmic consent	56
3.5. The ubiquitous city, the generator of algorithmic projections	58
3.5.1. The example of U-Songdo, the first ubiquitous city	60
3.5.2. U-Songdo, ubiquitous city, or city of the future?	62
3.5.3. Predictive algorithms and feedback loops	63
3.5.4. The systemic loop "data-predictive-action"	64
3.5.5. The limits of predictive algorithms faced with sheer chance.	65
Chapter 4. On the Value of Data and Algorithmic Projection.	67
4.1. The complex problem of retrieving data	67
4.2. How to define data value? The impact value and instantaneous value of interpreting data	68
4.2.1. An influx of data to develop	68
4.2.2. Instantaneous value of data interpretation, impact value and sale value	69
4.2.3. Instantaneous value of interpreting data	72
4.3. The value of a body of big data	79
4.3.1. The qualities of a body of big data in 6V	80
4.3.2. Value of a big data corpus.	81
Chapter 5. False Data and Fictitious Algorithmic Projections.	85
5.1. Proliferation of fictitious data and fake profiles	85
5.1.1. An influx of false data and bots as the majority of visitors	85
5.1.2. False data for protecting anonymity	87
5.1.3. Toward proliferation of fictitious profiles on social networks	87
5.1.4. Purchasing fake subscribers to build popularity	89
5.1.5. The specific case of Twitter.	92

5.1.6. The Tinder networking application and its derivatives	97
5.1.7. The “Robin Sage” experiment	98
5.2. Projective representation of fictitious data	100
5.2.1. The context of identity theft and the imitation of a real individual	101
5.2.2. Context for the creation of fictitious profiles.	102
5.3. Fictitious algorithmic projections and cybersecurity.	105
5.3.1. Economic interference from fake profiles	105
5.3.2. A cyber-attack targeting a large consulting firm from a fictitious profile	107
5.3.3. Attractive fictitious profiles (AFPs) in times of war	108
5.3.4. An influence operation by AFPs against American soldiers, attributed to Russia	110
5.3.5. China, Sun Tzu and AFPs.	111
Chapter 6. High-impact Cyber-operations Built on Fictitious Algorithmic Projections	113
6.1. The Newscaster cyber-espionage operation – NewsOnLine	113
6.1.1. A sophisticated operation	113
6.1.2. Modus operandi	114
6.1.3. Confidence that arises from time and coherence	117
6.2. Attacks by HoaxCrash and false transfer orders: the power of the cognitive lure	118
6.2.1. The human factor and cognitive lure: the keys to HoaxCrash and false transfer order attacks	118
6.2.2. Attacks using HoaxCrash	119
6.2.3. False transfer order and BEC attacks	129
6.2.4. Automatic detection of attacks by HoaxCrash and false transfer orders	135
Chapter 7. Prospective Epilogue: Global Algorithmic Projection and NBIC Convergence	139
7.1. A word on entropy.	139
7.2. Technology convergences and the spread of artificial intelligence to domains of human expertise	140
7.3. NBIC convergence	140
7.4. CKTS	142

7.5. Convergence M-I (Material-Information)	143
7.6. The spread of artificial intelligence to domains of human expertise	144
7.7. Global algorithmic projection and technology convergences	146
Appendix	149
Bibliography	151
Index	161
