Acknowledgments	xi
Preface	xiii
Chapter 1. Assessment and Perception of Nuclear Risk	1
1.1. Introduction	1
1.2. Danger, exposure, radiotoxicity and risk	4
1.2.1. Identification of radionuclide hazards	5
1.2.2. Contamination of the environment, including the anthroposphere, by radionuclides	7
1.2.3. Exposure to radiation	11
1.2.4. Collective doses	17
1.3. From dose to adverse effect in non-human organisms (flora and fauna)	17
1.3.1. The harmful effects of ionizing radiation	18
1.3.2. The dose–response relationship	20
1.3.3. Recommended threshold values	22
1.4. From dose to adverse effect in humans	24
1.4.1. Deterministic and stochastic effects	24
1.4.2. Dose–response relationships for average doses: epidemiological studies	25
1.4.3. Responses to low doses	26
1.5. Radiation protection and recommendations for human irradiation	32
1.6. Risk perception	35
1.6.1. Probability of a future nuclear accident	36
1.6.2. Countries using or renouncing the use of nuclear energy	37
1.6.3. Opinion polls on nuclear power	38

1.6.4. Estimated risk and perceived risk	41
1.7. Conclusion	42
Chapter 2. Lessons from the Past in the Field of Nuclear Accidents	45
2.1. Early signals and late lessons	45
2.2. Structures for disseminating information on radioactive risk.	45
2.2.1. Situation from 1945 to 1990	46
2.2.2. Situation from the Chernobyl accident to the present day	47
2.2.3. The example of France.	48
2.2.4. Future change?	50
2.3. Feedback (REX)	51
2.3.1. Introduction: what is REX?	51
2.3.2. The overall REX process	52
2.3.3. Causes of REX failure	54
2.4. Lessons from the past	55
2.4.1. Lessons learned from military nuclear activities and accidents	55
2.4.2. Lessons from industrial accidents	57
2.4.3. Medical accidents	72
2.5. Crisis exercises	77
2.5.1. Transnational exercises	77
2.5.2. National exercises	78
2.6. Incident and accident reporting	80
2.6.1. A common severity scale	80
2.6.2. Management of declarations	81
2.6.3. Reporting systems	81
2.6.4. Websites	82
2.7. Conclusion	83
Chapter 3. Research for the Future	85
3.1. Introduction: safety and the main types of accidents.	85
3.1.1. Safety history	85
3.1.2. The main safety objectives	86
3.1.3. Defense in depth	87
3.1.4. New research in the field of nuclear safety.	88
3.1.5. The aging of nuclear installations	90
3.2. International actions.	92
3.2.1. Improving the organization of security at the level of each state.	92
3.2.2. The IAEA	94
3.2.3. The NEA	95

3.2.4. The ICRP	98
3.2.5. UNSCEAR	99
3.2.6. The ICRU	100
3.2.7. The IRSN at international level	100
3.3. European actions	101
3.3.1. Euratom	101
3.3.2. Complementary safety assessments (ECS) process	102
3.4. French actions	103
3.5. Advances in nuclear safety	106
3.5.1. Better knowledge of nuclear fuel	107
3.5.2. Better preventing the risk of steam and hydrogen explosions	110
3.5.3. Controlling radionuclide releases	111
3.5.4. Consequences of a fire	112
3.5.5. Knowing more about corium	113
3.5.6. Controlling a water injection into a molten core	115
3.5.7. Mastering electrical distribution systems	115
3.5.8. Improving modeling	116
3.6. Advances in radioecology	118
3.6.1. Determination of the source term	118
3.6.2. Modeling of radionuclide dispersion in the terrestrial environment	119
3.6.3. Modeling of radionuclide dispersion in aquatic environments	120
3.6.4. Modeling of trophic transfer of radionuclides in organisms	121
3.7. Advances in radiation protection	121
3.7.1. Improving the radiological protection system	122
3.7.2. Improving the management of a nuclear accident	125
3.8. Safety research in other types of nuclear installations	128
3.8.1. Cooling pools	128
3.8.2. Spent fuel reprocessing plants	129
3.8.3. Sodium-cooled fast neutron reactors	129
3.8.4. ITER (International Thermonuclear Experimental Reactor) fusion facility	129
3.8.5. Better understanding of criticality	130
3.9. Advances in the humanities and social sciences	130
3.10. Conclusion	131
Chapter 4. Management of the Emergency Phase of a Nuclear Accident	133
4.1. Introduction	133
4.2. The first actions of the threat and rejection periods	134

4.2.1. Radioactive releases in the event of an accident from a nuclear reactor.	135
4.2.2. Radioactivity measurements during a nuclear accident.	136
4.3. Population management in the emergency phase.	138
4.3.1. Containment or sheltering of the population	140
4.3.2. Mass evacuation or evacuation of part of the population.	141
4.3.3. Distribution of stable iodine tablets	152
4.4. Food supply management	156
4.4.1. Recommended values	156
4.4.2. Regulatory values.	158
4.5. Intervention levels for the protection of populations.	160
4.5.1. International recommendations.	160
4.5.2. The texts of the various states	163
4.6. The organization of crisis management in France	164
4.6.1. Documentation of the ORSEC plan	165
4.6.2. The subdivisions of the ORSEC plan	167
4.6.3. French actors in nuclear crisis management	167
4.6.4. The internal emergency plan	168
4.6.5. The plan particulier d'intervention (PPI, special intervention plans).	170
4.6.6. Other complementary plans of the PPI	180
4.7. Exiting the emergency phase	182
4.8. Conclusion	183
Chapter 5. Management of the Post-accident Phase	185
5.1. Introduction.	185
5.2. The actions to be taken	186
5.2.1. Priority actions to be undertaken	187
5.2.2. Actions during the transitional period.	188
5.2.3. Long-term actions	189
5.2.4. Radioactivity measurements following a nuclear accident.	190
5.3. Environmental management	191
5.3.1. Management of aquatic environments.	191
5.3.2. Management of terrestrial environments	193
5.4. Managing the anthroposphere	195
5.4.1. Decontamination of living areas	196
5.4.2. Nuclear waste management	196
5.4.3. Agricultural management	197
5.4.4. Managing the economy	202
5.4.5. Food supply management	203
5.5. Management of exposed populations.	204
5.5.1. Limiting people's exposure to radiation	204

5.5.2. Radiological monitoring of exposed populations	206
5.5.3. Radiological and health monitoring of nuclear workers	208
5.5.4. Health monitoring of exposed populations	208
5.5.5. The return of evacuated populations.	209
5.5.6. The experience of local populations in contaminated environments.	211
5.5.7. Human dignity	211
5.6. The organization of post-accident management	212
5.6.1. International and European recommendations	212
5.6.2. French doctrine	215
5.7. Conclusion	221
Chapter 6. Terrorist Attacks and Nuclear Security	223
6.1. Introduction.	223
6.2. Malicious acts	224
6.2.1. Attempts at radiation aggression	225
6.2.2. The assassination of Alexander Litvinenko	225
6.2.3. Arafat's death	226
6.2.4. Overflights and intrusions into nuclear facilities	228
6.3. Possible terrorist attacks	228
6.3.1. The use of a nuclear weapon	229
6.3.2. The use of a "dirty" bomb.	229
6.3.3. Attack on a nuclear installation or transport	231
6.3.4. The release of radioactive material	231
6.3.5. Cyber-attacks	232
6.4. The consequences of a terrorist act in the nuclear field	233
6.4.1. The health consequences	234
6.4.2. The psychological consequences.	236
6.4.3. Countermeasures in the event of terrorist attacks	237
6.5. Organizational preparation for a terrorist threat	240
6.6. Prevention of terrorist risk in the nuclear field	242
6.6.1. Nuclear non-proliferation	242
6.6.2. Trafficking in military weapons and radionuclides	245
6.6.3. The actions to be taken.	247
6.6.4. The limitation of nuclear materials	248
6.7. Conclusion	249
Chapter 7. General Conclusions	253
7.1. The probability of military and civil accidents	253
7.1.1. Nuclear risks and probabilities	253
7.1.2. The causes of accidents	254
7.2. The environmental consequences of accidents	255

7.3. The health consequences of accidents	256
7.4. The economic consequences of accidents	260
7.5. Prevention of nuclear accidents	262
7.6. Management of the emergency and post-accident phases.	264
7.7. Perception of nuclear risk	264
7.8. Public information.	265
