Acknowledgments	xv
Chapter 1. An Adaptive Large Neighborhood Search Heuristic for the Green Dial-a-Ride Problem	1
Mohamed Amine MASMOUDI, Manar HOSNY and Emrah DEMIR	
1.1. Introduction.	1
1.2. Literature review.	3
1.2.1. The Dial-a-Ride Problem	4
1.2.2. The green vehicle routing problem	5
1.3. Problem definition.	5
1.4. An Adaptive Large Neighborhood Search for the G-DARP	10
1.4.1. Adaptive weight adjustment procedure	11
1.4.2. Removal and insertion operators	12
1.4.3. Local search operators	12
1.5. Computational experiments	13
1.5.1. Data and experimental setting	13
1.5.2. Parameters setting	14
1.5.3. Computational analysis	16
1.6. Conclusion	23
1.7. References	23
Chapter 2. Role of Green Technology Vehicles in Road Transportation Emissions – Case of the UK	27
Niaz WASSAN, Angus FURNEAUX and Said SALHI	
2.1. Introduction.	27
2.2. Alternative Fuel-Powered vehicles market	29

2.3. Electric vehicles – options and features	30
2.3.1. Battery relevance	36
2.3.2. Charging implications	40
2.3.3. Relevance of regenerative braking technology.	44
2.3.4. Emissions	44
2.4. UK transport emissions and the impact of BEVs.	47
2.5. Cost implications	55
2.6. Conclusion	56
2.7. References	57
Chapter 3. Transport Pooling: Moving Toward Green Distribution.	63
Alaeddine ZOUARI	
3.1. Introduction.	63
3.2. Concepts of collaborative logistics	65
3.2.1. Definitions and issues	65
3.2.2. Forms of logistical collaboration.	66
3.3. Pooling of physical flows between organizations	68
3.4. Literature review.	69
3.4.1. Choice of articles	69
3.4.2. Analysis and discussion of the results.	72
3.5. Proposal of pooling scenarios for the urban distribution of goods.	75
3.6. Comparison of scenarios	81
3.6.1. Distances traveled	81
3.6.2. Greenhouse gas emissions.	83
3.6.3. Distribution cost	84
3.6.4. Delivery time	85
3.6.5. Best scenario.	86
3.7. Proposal for a shared long-distance distribution model	87
3.8. Conclusion	90
3.9. References	90
Chapter 4. A Ruin and Recreate Solution Method for a Lexicographic Vehicle Routing Problem Integrating Park-and-Loop and Car Sharing	97
Olivier GALLAY and Nicolas ZUFFEREY	
4.1. Introduction.	97
4.2. Literature review.	99
4.3. Considered problem.	101
4.4. Lexicographic approach	103
4.5. Solution method	104

4.6. Results	107
4.6.1. Walking	108
4.6.2. Electric kick scooter	111
4.7. Conclusion and future work	112
4.8. References	113
Chapter 5. An Overview of the Recent Solution Approaches in the Green Vehicle Routing Problem.	115
Emna MARREKCHI, Walid BESBES and Diala DHOUIB	
5.1. Introduction.	115
5.2. Chronological progress of the literature on the GVRP	116
5.2.1. The Green-VRP.	116
5.2.2. The Pollution-Routing Problem	119
5.3. Solution methodologies for the GVRP.	120
5.3.1. Exact methods.	120
5.3.2. Metaheuristics.	123
5.3.3. Heuristics	128
5.4. Conclusion	129
5.5. References	130
Chapter 6. Multi-Criteria Decision Aid for Green Modes of Crude Oil Transportation Using MACBETH: The Sfax Region Case	135
Nouha HAMMAMI, Mohamed Haykal AMMAR and Diala DHOUIB	
6.1. Introduction.	135
6.2. State-of-the-art	137
6.2.1. Hazardous materials transportation integrated location and routing problem.	137
6.2.2. Hazardous materials transportation risk assessment problem	138
6.2.3. Hazardous materials transportation network design problem	139
6.3. Real case: choice of crude oil transportation modal from the Sfax region to the Skhira port.	142
6.3.1. Identification of the problem	143
6.3.2. Method for Measuring Attractiveness by a Categorical-Based Evaluation Technique (MACBETH)	143
6.3.3. Research methodology: MACBETH application	144
6.3.4. Results and discussions	150
6.4. Conclusion	157
6.5. References	158

Chapter 7. Green Reverse Logistics: Case of the Vehicle Routing Problem with Delivery and Collection Demands	161
Naveed WASSAN, Niaz WASSAN, Lina SIMEONOVA and Walid BESBES	
7.1. Introduction and significance	161
7.2. The Vehicle Routing Problem and its variants	164
7.2.1. The evolution of the Vehicle Routing Problem	164
7.2.2. The Vehicle Routing Problem	164
7.2.3. VRP variants.	164
7.3. The VRP with delivery and collection demand models	166
7.3.1. The VRP with Mixed Deliveries and Pickups	166
7.3.2. The VRP with Simultaneous Deliveries and Pickups.	166
7.3.3. The VRP with Backhauls	167
7.3.4. The Multiple-Trip Vehicle Routing Problem with Backhauls.	168
7.4. Studies in VRPB-related areas.	169
7.4.1. Significance of the VRP models with delivery and collection demands.	170
7.4.2. Ecological relevance of the VRP models	171
7.4.3. Computation of freight transport greenhouse gas emissions.	172
7.4.4. Vehicle routing models directly focused on green transportation	174
7.4.5. Green VRP models	175
7.4.6. Electric vehicles modeling	176
7.5. Conclusion	177
7.6. References	178
Chapter 8. An Improved DTC Induction Motor for Electric Vehicle Propulsion: An Intention to Provide a Comfortable Ride	185
Fatma BEN SALEM and Moez FEKI	
8.1. Introduction.	185
8.2. Several components of EV motor drive	187
8.3. An overview of induction motor control strategies	188
8.4. DTC strategies	189
8.4.1. Conventional DTC fundamentals	189
8.4.2. An improvement of DTC strategy: fixed torque switching frequency	193
8.5. Comparative study based on simulation results.	195
8.5.1. Steady-state and transient behavior analysis	195
8.5.2. Performance criteria	197
8.5.3. Discussion	198
8.6. Conclusion	199
8.7. References	199

Chapter 9. Optimization in Multilevel Green Transportation Problems with Electrical Vehicles	203
Marcos R. LEITE, Heder S. BERNANDINO, Luciana B. GONÇALVES and Stênio SOARES	
9.1. Introduction.	203
9.2. Transportation problems with electric vehicles.	206
9.2.1. Multilevel formulations	207
9.2.2. Summary review of the literature	209
9.3. Search techniques	211
9.3.1. Exact optimization techniques	212
9.3.2. Genetic algorithms	213
9.3.3. Imperialism competitive algorithm	214
9.3.4. Particle Swarm Optimization	216
9.3.5. Simulated annealing	217
9.3.6. Neighborhood search.	218
9.3.7. Summary review of the literature	219
9.4. Tendencies and challenges.	223
9.5. Concluding remarks.	225
9.6. References	226
List of Authors	229
Index	231
