Preface	xi
List of Acronyms	xv
List of Figures	xix
List of Tables	xxiii
Chapter 1. Challenges Involving Cybersecurity and Traceability in Factory 4.0	1
1.1. Introduction	1
1.2. Traceability challenges in Factory 4.0	3
1.2.1. The volume of data	3
1.2.2. Transparency	4
1.2.3. The contribution of blockchain	5
1.3. Plant overview	6
1.3.1. Definition of perimeters	6
1.3.2. Interactions between perimeters	7
1.3.3. Network perimeters in the factory	7
1.3.4. Access controls and perimeter monitoring	9
1.4. Overview of cybersecurity in Industry 4.0	9
1.5. Vulnerabilities, risks and threats in Industry 4.0	12
1.5.1. Definitions	12
1.5.2. Business impacts	14
1.5.3. Major cybersecurity threats in Industry 4.0	14
1.5.4. Vulnerabilities, risks and threats by perimeter	17

1.6. Review of cybersecurity solutions	21
1.6.1. Definitions	21
1.6.2. Cybersecurity countermeasures	23
1.6.3. Proposals for cybersecurity solutions in the literature	24
1.6.4. <i>Honeypots</i> and <i>digital twins</i>	39
1.7. Summary of good technical practices in cybersecurity	43
1.7.1. Trust and integrity	43
1.7.2. Cloud security	48
1.7.3. Machine-to-machine safety	48
1.7.4. Data protection	48
1.7.5. Software/firmware updates	49
1.7.6. Access control	49
1.7.7. Networks, protocols and encryption	49
1.7.8. Monitoring and auditing	50
1.7.9. Configuration management	50
1.8. Industry 4.0, cybersecurity and traceability outlines	50
1.9. References	52
Chapter 2. Global Approach to Traceability for Factory 4.0	57
2.1. Basic principles	57
2.1.1. Chain traceability	58
2.1.2. Internal traceability	59
2.1.3. Examples of internal traceability	59
2.1.4. Downstream and upstream traceability	61
2.1.5. Identification formats	62
2.1.6. Data collection	64
2.1.7. Traceability challenges and significance	65
2.2. Implementation principles	66
2.2.1. Object flow formalization	67
2.2.2. Identification	67
2.2.3. Link/association management	69
2.3. Regulations, laws and standards	70
2.3.1. General regulation	70
2.3.2. Automotive industry regulation	72
2.3.3. Regulation of food and pharmaceutical industries	74
2.4. Status of traceability research	80
2.4.1. Terminology and definitions	80
2.4.2. Traceability data	81
2.5. Product-oriented traceability state-of-the-art	82
2.5.1. Research on product-oriented traceability	82
2.5.2. Technological innovations in traceability systems	83

2.6. Proposal for an approach to traceability for Factory 4.0	87
2.6.1. Product perspective	88
2.6.2. Traceability data characterization	89
2.6.3. Challenges of the approach	90
2.7. Summary of the strengths and weaknesses of the contribution	91
2.8. References	93
Chapter 3. Blockchain Integration in Traceability for Factory 4.0	97
3.1. Blockchain paradigm presentation	97
3.1.1. Blockchain	99
3.1.2. Blockchain network	99
3.1.3. Node	99
3.1.4. Block	99
3.1.5. Transaction	100
3.1.6. Consensus algorithm	100
3.1.7. <i>Smart contract</i>	100
3.1.8. Types of implementations and environments	100
3.1.9. Examples of consensus algorithms	101
3.2. MultiChain blockchain platform	103
3.2.1. Features	103
3.2.2. Main parameters	104
3.2.3. MultiChain JSON API	105
3.2.4. Comparison with other blockchain solutions	105
3.3. State of blockchain research for Industry 4.0	118
3.4. Our approach to blockchain for traceability in Factory 4.0	120
3.4.1. Target objectives and guarantees	120
3.4.2. Architecture overview	122
3.4.3. Data management	124
3.4.4. Privacy management	125
3.4.5. Non-repudiation management	126
3.5. Functional description of the BPCAT MultiChain implementation	127
3.5.1. Network architecture and stakeholder representation	128
3.5.2. Blockchain and storage management	129
3.5.3. Raw traceability data management	130
3.5.4. Privacy guaranty	131
3.5.5. File management	133
3.5.6. Data signing	134
3.5.7. Data integrity verification	136
3.6. Technical challenges to be addressed and proposed solutions	138
3.6.1. Mining and energy consumption	138
3.6.2. Storage volume optimization	138

3.7. BPCAT MultiChain implementation technical description	144
3.7.1. Node configuration and deployment	145
3.7.2. Blockchain initialization	148
3.7.3. Data pre-loading	149
3.8. Measurements, performance and benchmark	150
3.8.1. Measurement retrieval	150
3.8.2. Client application measurement reading	151
3.8.3. Benchmark operating principle	152
3.9. Summary of the strengths and weaknesses of the contribution	153
3.10. References	156
Chapter 4. Impact Assessment of Blockchain on Factory 4.0	159
4.1. State-of-the-art evaluation of factory systems and blockchain	159
4.2. Theoretical foundations of simulation	162
4.2.1. Definitions	162
4.2.2. Model classes	163
4.2.3. Specification hierarchy	164
4.2.4. Modeling formalisms	164
4.3. Introducing ARTIS*: a DEVS C++ 11 library	165
4.3.1. Atomic model	165
4.3.2. Coupled model	171
4.3.3. Constructor and parameters	171
4.4. Requirements specification for the proposed evaluation	174
4.5. Functional presentation of the simulation model	176
4.5.1. At plant level	176
4.5.2. At line level	177
4.6. Factory 4.0 simulator technical presentation with ARTIS*	179
4.6.1. Architecture	179
4.6.2. Scenario generator	180
4.6.3. Scenario parameterization	183
4.7. Presentation of simulated scenarios	191
4.7.1. Used storage space evaluation	191
4.7.2. Energy consumption assessment	197
4.7.3. Carbon (CO ₂) emissions evaluation	206
4.8. Summary of the strengths and weaknesses of the contribution	211
4.9. References	212
Chapter 5. Digitalization-Centered Perspectives for Factory 4.0	215
5.1. Toward a safer and more secure digitalization of factories	215
5.1.1. Contributions of the book to factory 4.0 cybersecurity	215
5.1.2. Contributions of the book to blockchain for traceability	216

5.1.3. Perspectives	217
5.2. Toward more dynamic management using digital twins	217
5.2.1. Contributions of the book to the evaluation of blockchain projects	217
5.2.2. Prospects	218
5.3. Toward digitalization while ensuring factory resilience	218
5.3.1. Assessment of the state of factory resilience to cope with digitalization	219
5.3.2. Prospects	220
5.4. References	221
List of Authors	223
Index	225
