Chapter 1. Treated Wastewater Reuse: A New Resource	1
1.1. Observations on the current situation.	2
1.2. Climate change.	6
1.3. Solutions to reduce water stress.	7
1.3.1. Direct and indirect reuse.	8
1.4. The various purposes of reuse.	12
1.5. Adapting to the local context	13
1.6. Policies and institutions to support reuse	14
1.7. Glossary.	15
1.8. References	16
Chapter 2. Characterization of Treated Wastewater	19
2.1. Main parameters defining the quality of treated wastewater	19
2.1.1. Indicators of organic matter: biological oxygen demand, chemical oxygen demand and total organic carbon.	21
2.1.2. Suspended solids	25
2.1.3. Nitrogen	26
2.1.4. Phosphorus.	27
2.1.5. Pesticides and endocrine disruptors	28
2.2. Microbiological aspects	33
2.2.1. Bacteria.	35
2.2.2. Enteric viruses.	37
2.2.3. Enteric protozoa.	38
2.2.4. Helminth eggs.	38
2.2.5. Fecal contamination indicators	40
2.3. References	45

Chapter 3. Applications and Uses of Reused Water	49
3.1. The different uses	54
3.1.1. Agriculture	54
3.1.2. Reuse in industry	67
3.1.3. Groundwater recharge	69
3.1.4. Recreational and environmental areas	71
3.1.5. Urban non-food uses	72
3.1.6. Drinking water	74
3.2. References	75
Chapter 4. Regulations	85
4.1. Regulations, state of the art and future challenges of municipal wastewater treatment and water reuse	85
4.2. Regulations for treated wastewater reuse in France	87
4.2.1. Application to irrigation	89
4.3. European Directive	95
4.3.1. Minimum requirements applicable to reclaimed water intended for agricultural irrigation	97
4.4. World Health Organization	100
4.4.1. Objectives of pathogen reduction for the different irrigation types	103
4.4.2. Monitoring/verification	108
4.5. Regulation on treated wastewater reuse in the United States	108
4.6. Regulation on water reuse in China	112
4.7. Australia	113
4.8. Mediterranean countries and the Middle East	115
4.9. Conclusion	116
4.10. References	121
Chapter 5. Treated Wastewater Reuse Planning	127
5.1. Project objectives and limitations	127
5.1.1. Preliminary investigations	128
5.1.2. Selection of potential markets	128
5.1.3. Assessment of alternatives	129
5.1.4. Awareness and education	130
5.1.5. Importance of terminology	131
5.1.6. Economic and legal aspects	131
5.2. References	132

Chapter 6. Treatment Technologies	133
6.1. Use of raw wastewater	135
6.2. Bases of the treatment process concept	136
6.3. References	139
Chapter 7. Tertiary Filtration.	141
7.1. Gravity filtration without reagents	142
7.1.1. Rapid filters and high-rate filters (HRF)	142
7.1.2. Dual-media filters.	144
7.1.3. Pressure filters.	146
7.2. Gravity filtration with reagents	147
7.3. Filtration mechanisms.	148
7.4. Implementation parameters	150
7.4.1. Media	150
7.4.2. Media height ratio/d ₁₀	157
7.4.3. Effective size ratio	158
7.5. Size parameters: filtration rate and media height.	159
7.5.1. Filter depth modelling	160
7.6. Operating parameters	162
7.6.1. Pressure drop in a clean filter.	162
7.6.2. Retention capacity	165
7.6.3. Filter backwashing conditions	168
7.7. Filtration technologies	178
7.7.1. Conventional single-layer filters	180
7.7.2. High-rate filters	182
7.7.3. Example of tertiary filtration design on single-media filter	187
7.7.4. Dual-media filters.	188
7.7.5. Filters under pressure	194
7.7.6. Performances of gravity filters	196
7.8. Mobile material filters	197
7.9. Rotary drum filters	198
7.9.1. Hydrotech filter characteristics	200
7.10. References.	202
Chapter 8. Disinfection	207
8.1. Microorganisms present in treated wastewater	207
8.1.1. Bacteria.	208
8.1.2. Viruses	210
8.1.3. Parasites	211

8.2. General rules of chemical disinfection	212
8.2.1. Mode of action of chemical disinfectants in treated wastewater.	212
8.2.2. Reduction principle of the number of germs – “Log” units	214
8.3. Factors influencing the effectiveness of chemical disinfection.	217
8.3.1. Turbidity	218
8.3.2. Presence of oxidizable matter.	218
8.3.3. Injection mode and point	218
8.3.4. Design of the contact tank.	219
8.4. Qualities of a good disinfectant	219
8.5. The main techniques of wastewater chemical disinfection	220
8.5.1. Chlorine disinfection	220
8.5.2. Chlorine dioxide disinfection	243
8.5.3. Chloramination	253
8.6. Disinfection with ozone	263
8.6.1. General information on ozone	264
8.6.2. Preparation and implementation of ozone	265
8.6.3. Transfer of ozone in water to be treated.	266
8.6.4. Performance of disinfection with ozone.	268
8.7. Organic peracids: performic acid and peracetic acid.	271
8.7.1. Production organic peracids.	271
8.7.2. Disinfection and oxidation mechanisms of organic peracids	272
8.7.3. Performic acid.	274
8.7.4. Peracetic acid	276
8.7.5. Degradation kinetics of peracids	276
8.7.6. Primary, secondary and tertiary wastewater applications	278
8.8. UV disinfection	281
8.8.1. General information on UV radiation	281
8.8.2. Inactivation mechanisms	282
8.8.3. Lethal dose and inactivation kinetics	284
8.8.4. Implementation	286
8.8.5. Sizing parameters.	290
8.8.6. Factors influencing UV treatment efficiency.	291
8.8.7. Performance	295
8.8.8. UV disinfection advantages and disadvantages in wastewater	300
8.9. Criteria for selecting a disinfection technique.	302
8.10. References.	304

Index	313
