

# Contents

<b>Preface</b> . . . . .	xiii
Emmanuel PROUFF, Guénaél RENAULT, Matthieu RIVAIN and Colin O'FLYNN	
<b>Part 1. White-Box Cryptography</b> . . . . .	1
<b>Chapter 1. Introduction to White-Box Cryptography</b> . . . . .	3
Pierre GALISSANT and Louis GOUBIN	
1.1. Introductory remarks . . . . .	3
1.2. Basic notions for white-box cryptography . . . . .	6
1.2.1. Unbreakability . . . . .	6
1.2.2. Incompressibility . . . . .	7
1.2.3. One-wayness . . . . .	8
1.3. Proposed (and broken) solutions . . . . .	9
1.3.1. Block ciphers . . . . .	9
1.3.2. Asymmetric algorithms . . . . .	10
1.4. Generic strategies to build white-box implementations . . . . .	12
1.4.1. DCA and countermeasures . . . . .	12
1.4.2. Using fully homomorphic encryption (FHE) . . . . .	13
1.4.3. White-box solutions with the help of a (small) tamper-resistant hardware . . . . .	14
1.5. Applications of white-box cryptography . . . . .	15
1.5.1. EMV payments on NFC-enabled smartphones without secure element . . . . .	15
1.5.2. Software DRM mechanisms for digital contents . . . . .	16
1.5.3. Mobile contract signing . . . . .	16
1.5.4. Cryptocurrencies and blockchain technologies . . . . .	16
1.6. Notes and further references . . . . .	17
1.7. References . . . . .	19

<b>Chapter 2. Gray-Box Attacks against White-Box Implementations</b> . . . . .	23
Aleksei UDOVENKO	
2.1. Introduction . . . . .	23
2.2. Specifics of white-box side-channels . . . . .	24
2.2.1. Determinism . . . . .	25
2.2.2. Precise measurements . . . . .	25
2.2.3. Data-dependency graph and attack windows . . . . .	25
2.2.4. Computational model . . . . .	26
2.2.5. Computational traces . . . . .	28
2.2.6. Sensitive/predictable functions . . . . .	28
2.3. Fault injections . . . . .	30
2.3.1. Locating and removing pseudorandomness and dummy values . . . . .	31
2.3.2. Detecting linear shares from output collisions . . . . .	33
2.4. Exact matching attack . . . . .	35
2.4.1. First-order exact matching attack . . . . .	35
2.4.2. Higher order exact matching attack . . . . .	37
2.5. Linear decoding analysis/algebraic attacks . . . . .	39
2.5.1. Basic algebraic attack . . . . .	39
2.5.2. Differential algebraic attack against shuffling . . . . .	40
2.6. Countermeasures against the algebraic attack . . . . .	43
2.6.1. Security model sketch . . . . .	43
2.6.2. Nonlinear masking . . . . .	45
2.6.3. Dummy shuffling . . . . .	47
2.7. Conclusions . . . . .	49
2.8. Notes and further references . . . . .	50
2.9. References . . . . .	50
<b>Chapter 3. Tools for White-Box Cryptanalysis</b> . . . . .	53
Philippe TEUWEN	
3.1. Introduction . . . . .	53
3.2. Tracing programs . . . . .	55
3.3. Target recognition . . . . .	57
3.4. Acquiring traces for side-channel analysis . . . . .	59
3.5. Preprocessing traces . . . . .	61
3.6. Differential computation analysis . . . . .	62
3.7. Linear decoding analysis also known as algebraic attack . . . . .	64
3.8. Injecting faults . . . . .	65
3.9. Differential fault analysis . . . . .	67
3.10. Coping with external encodings . . . . .	69
3.11. Conclusion . . . . .	70

3.12. Notes and further references . . . . .	70
3.13. References . . . . .	72
<b>Chapter 4. Code Obfuscation . . . . .</b>	<b>73</b>
Sebastian SCHRITTWIESER and Stefan KATZENBEISSER	
4.1. Introduction . . . . .	73
4.1.1. Definition of obfuscation . . . . .	73
4.1.2. Goals of obfuscation . . . . .	74
4.1.3. Protecting against locating data . . . . .	74
4.1.4. Protecting against locating code . . . . .	74
4.1.5. Protecting against extraction of code . . . . .	74
4.1.6. Protecting against understanding of code . . . . .	75
4.1.7. Attacker models . . . . .	75
4.1.8. Pattern matching . . . . .	75
4.1.9. Automated static analysis . . . . .	75
4.1.10. Automated dynamic analysis . . . . .	76
4.1.11. Human-assisted analysis . . . . .	76
4.2. Obfuscation methods . . . . .	76
4.2.1. Data obfuscation . . . . .	77
4.2.2. Static obfuscation . . . . .	78
4.2.3. Dynamic obfuscation . . . . .	84
4.3. Attacks against obfuscation . . . . .	85
4.3.1. Principles of program analysis . . . . .	85
4.3.2. Measuring the strength of obfuscations . . . . .	86
4.4. Application of code obfuscation . . . . .	87
4.4.1. Digital rights management . . . . .	87
4.4.2. Intellectual property protection . . . . .	88
4.4.3. Malware obfuscation . . . . .	88
4.4.4. Hardware-software binding . . . . .	88
4.4.5. Software diversity . . . . .	89
4.5. Conclusions . . . . .	89
4.6. Notes and further references . . . . .	89
4.7. References . . . . .	90
<b>Part 2. Randomness and Key Generation . . . . .</b>	<b>93</b>
<b>Chapter 5. True Random Number Generation . . . . .</b>	<b>95</b>
Viktor FISCHER, Florent BERNARD and Patrick HADDAD	
5.1. Introduction . . . . .	95
5.2. TRNG design . . . . .	96
5.3. Randomness and sources of randomness . . . . .	97
5.3.1. Example: jitter of a clock signal as a source of randomness . . . . .	99
5.3.2. Stochastic model of the phase of the jittered clock signal . . . . .	99

---

5.4. Randomness extraction and digitization . . . . .	100
5.4.1. Example: oscillator-based TRNGs . . . . .	102
5.5. Post-processing of the raw binary signal . . . . .	104
5.5.1. Algorithmic post-processing . . . . .	104
5.6. Stochastic modeling and entropy rate management of the TRNG . . . . .	105
5.6.1. Example: a comprehensive stochastic model of the EO-TRNG . . . . .	107
5.6.2. Example: stochastic model of the MO-TRNG . . . . .	108
5.7. TRNG testing and testing strategies . . . . .	109
5.7.1. Generic (black-box) statistical tests used in cryptography . . . . .	110
5.7.2. Online statistical tests . . . . .	112
5.7.3. Example: dedicated online tests for the MO-TRNG . . . . .	112
5.8. Conclusion . . . . .	113
5.9. Notes and further references . . . . .	113
5.10. References . . . . .	114
<b>Chapter 6. Pseudorandom Number Generation . . . . .</b>	<b>115</b>
Jean-René REINHARD and Sylvain RUHAULT	
6.1. Introduction . . . . .	115
6.2. PRNG with ideal noise source . . . . .	116
6.2.1. Standard PRNG . . . . .	117
6.2.2. Stateful PRNG . . . . .	118
6.2.3. Stateful pseudorandom generator with inputs . . . . .	120
6.3. PRNG with imperfect noise sources . . . . .	121
6.3.1. Extractors . . . . .	122
6.3.2. Robustness model of Coretti et al. (2019) . . . . .	124
6.4. Standard PRNG with inputs . . . . .	125
6.4.1. General architecture of NIST PRNG with inputs . . . . .	125
6.4.2. Security analysis and good practices . . . . .	126
6.5. Notes and further references . . . . .	128
6.6. References . . . . .	129
<b>Chapter 7. Prime Number Generation and RSA Keys . . . . .</b>	<b>131</b>
Marc JOYE and Pascal PAILLIER	
7.1. Introduction . . . . .	131
7.2. Primality testing methods . . . . .	133
7.3. Generation of random units . . . . .	133
7.4. Generation of random primes . . . . .	136
7.4.1. Probable primes . . . . .	138
7.4.2. Provable primes . . . . .	138
7.5. RSA key generation . . . . .	140
7.6. Exercises . . . . .	143

7.7. Notes and further references . . . . .	144
7.8. References . . . . .	146
<b>Chapter 8. Nonce Generation for Discrete Logarithm-Based Signatures . . . . .</b>	<b>151</b>
Akira TAKAHASHI and Mehdi TIBOUCHI	
8.1. Introduction . . . . .	151
8.2. The hidden number problem and randomness failures . . . . .	153
8.2.1. From Schnorr to HNP . . . . .	153
8.2.2. From ECDSA to HNP . . . . .	154
8.3. Lattice attacks . . . . .	154
8.3.1. Lattice basics . . . . .	155
8.3.2. Expressing the HNP as a lattice problem . . . . .	156
8.3.3. Some recent developments . . . . .	158
8.4. Fourier transform attack . . . . .	160
8.4.1. Quantifying bias using discrete Fourier transform . . . . .	160
8.4.2. Stretching the peak width . . . . .	162
8.4.3. Range reduction algorithms . . . . .	165
8.5. Preventing randomness failures . . . . .	166
8.6. Notes and further references . . . . .	167
8.7. Acknowledgment . . . . .	169
8.8. References . . . . .	169
<b>Chapter 9. Random Error Distributions in Post-Quantum Schemes . . . . .</b>	<b>173</b>
Thomas PREST	
9.1. Introduction . . . . .	173
9.2. Why post-quantum schemes need random errors . . . . .	174
9.2.1. Example 1: noisy ElGamal . . . . .	175
9.2.2. Example 2: hash-then-sign . . . . .	176
9.2.3. Example 3: Fiat–Shamir with aborts . . . . .	177
9.3. Distributions for random errors . . . . .	178
9.3.1. Uniform distributions . . . . .	179
9.3.2. Fixed weight distributions . . . . .	179
9.3.3. Variants of the binomial distribution . . . . .	180
9.3.4. Discrete and rounded Gaussians . . . . .	181
9.3.5. Randomized rejection sampling . . . . .	182
9.4. Sampling algorithms . . . . .	184
9.4.1. Table-based algorithms . . . . .	184
9.4.2. Random permutations . . . . .	186
9.4.3. Convolution-based algorithms . . . . .	189
9.4.4. Polynomial approximation . . . . .	190
9.4.5. Rejection methods . . . . .	191

9.4.6. Masking the various algorithmic approaches . . . . .	192
9.5. Notes and further references . . . . .	193
9.6. References . . . . .	197

**Part 3. Real-World Applications . . . . . 203**

**Chapter 10. ROCA and Minerva Vulnerabilities . . . . . 205**

Jan JANCAR, Petr SVENDA and Marek SYS

10.1. The Return of Coppersmith’s Attack . . . . .	206
10.1.1. Fingerprinting . . . . .	207
10.1.2. Factorization attack . . . . .	208
10.1.3. Practical impact and disclosure . . . . .	210
10.1.4. Notes and further references . . . . .	215
10.2. Minerva . . . . .	216
10.2.1. Discovery and leakage . . . . .	216
10.2.2. Cause . . . . .	217
10.2.3. Attack . . . . .	218
10.2.4. Impacted domains and disclosure . . . . .	220
10.2.5. Notes and further references . . . . .	222
10.3. References . . . . .	222

**Chapter 11. Security of Automotive Systems . . . . . 225**

Lennert WOUTERS, Benedikt GIERLICHs and Bart PRENEEL

11.1. Introduction . . . . .	225
11.2. The embedded automotive attacker . . . . .	226
11.3. An overview of automotive attacks . . . . .	227
11.3.1. Proximity vehicle attacks . . . . .	227
11.3.2. Remote vehicle attacks . . . . .	229
11.3.3. Infrastructure attacks . . . . .	230
11.4. Application of physical attacks in automotive security . . . . .	231
11.4.1. Side-channel analysis . . . . .	231
11.4.2. Fault injection . . . . .	232
11.5. Case study: Tesla Model X keyless entry system . . . . .	233
11.5.1. The key fob . . . . .	234
11.5.2. The body control module . . . . .	235
11.5.3. Putting it all together . . . . .	235
11.6. Conclusion . . . . .	237
11.7. References . . . . .	237

---

<b>Chapter 12. Practical Full Key Recovery on a Google Titan Security Key</b> . . . . .	245
Laurent IMBERT, Victor LOMNE, Camille MUTCHLER and Thomas ROCHE	
12.1. Introduction . . . . .	245
12.2. Preliminaries . . . . .	246
12.2.1. Product description . . . . .	246
12.2.2. <i>Google Titan Security Key</i> Teardown . . . . .	247
12.2.3. Matching the <i>Google Titan Security Key</i> with other NXP products . . . . .	247
12.2.4. Side-channel observations . . . . .	248
12.3. Reverse-engineering and vulnerability of the ECDSA algorithm . . . . .	249
12.3.1. Reverse engineering the ECDSA signature algorithm . . . . .	249
12.3.2. A sensitive leakage . . . . .	251
12.4. A key-recovery attack . . . . .	252
12.4.1. Recovering scalar bits from the observed leakage . . . . .	253
12.4.2. Lattice-based attack with partial knowledge of the nonces . . . . .	253
12.5. Take-home message . . . . .	255
12.6. References . . . . .	255
<b>Chapter 13. An Introduction to Intentional Electromagnetic Interference Exploitation</b> . . . . .	257
José LOPES ESTEVES	
13.1. IEMI: history and definition . . . . .	257
13.2. Information security threats related to electromagnetic susceptibility . . . . .	259
13.3. Electromagnetic fault injection . . . . .	260
13.4. Destruction, denial of service . . . . .	261
13.5. Denial of service on radio front-ends . . . . .	261
13.6. Signal injection in communication interfaces . . . . .	262
13.7. Signal injection attacks on sensors and actuators . . . . .	262
13.8. IEMI-covert channel . . . . .	263
13.8.1. The air gap . . . . .	264
13.8.2. Bridging air gaps . . . . .	264
13.8.3. Threat model . . . . .	266
13.8.4. Practical IEMI-covert channel on a PC . . . . .	266
13.9. Electromagnetic watermarking . . . . .	269
13.9.1. Threat model . . . . .	269
13.9.2. EMW for forensic tracking . . . . .	269
13.9.3. Practical EMW on a UAV . . . . .	271
13.10. Conclusion . . . . .	273
13.11. References . . . . .	274

<b>Chapter 14. Attacking IoT Light Bulbs</b> . . . . .	279
Colin O'FLYNN and Eyal RONEN	
14.1. Introduction . . . . .	279
14.2. Preliminaries . . . . .	280
14.2.1. ZLL (ZigBee Light Link) and smart light systems . . . . .	280
14.2.2. Lamp hardware . . . . .	281
14.2.3. Firmware updates . . . . .	281
14.2.4. Hue Bridge hardware . . . . .	282
14.3. Hardware AES and AES-CTR attacks . . . . .	282
14.3.1. Application to ATmega128RFA1 . . . . .	283
14.3.2. Later-round attacks . . . . .	285
14.4. AES-CCM bootloader attack . . . . .	286
14.4.1. Understanding Philips OTA image cryptographic primitives . . . . .	286
14.4.2. CPA attack against the CCM CBC MAC verification . . . . .	289
14.5. Application of attack . . . . .	293
14.6. Notes and further references . . . . .	294
14.7. References . . . . .	295
 <b>List of Authors</b> . . . . .	 297
 <b>Index</b> . . . . .	 301
 <b>Summary of Volume 1</b> . . . . .	 305
 <b>Summary of Volume 2</b> . . . . .	 313
