Preface	xi
Arnaud PERROT	
Chapter 1. 3D Concrete Printing: Technologies, Applications and Classifications	1
Arnaud PERROT, Yohan JACQUET and Sofiane AMZIANE	
1.1. Introduction: the different facets of printing	1
1.2. 3D printing: from digital model to physical object.	2
1.2.1. From digital model to print	2
1.2.2. Printing processes.	3
1.2.3. Printing processes for cementitious materials	4
1.3. 3D concrete printing – application examples	5
1.3.1. Prefabrication	5
1.3.2. On-site printing	8
1.3.3. Toward the democratization of 3D concrete printing?	10
1.4. Classification of concrete printing processes	11
1.4.1. Classification proposed by Duballet and co-authors	11
1.4.2. Classification proposed by RILEM	16
1.4.3. Complementary classification.	18
1.5. Printing concrete with alternative binders or without cement?	19
1.6. Conclusion	21
1.7. References	21

Chapter 2. 3D Concrete Printing by Extrusion and Filament Deposition	31
Arnaud PERROT and Yohan JACQUET	
2.1. Introduction.	31
2.2. Major printing families	33
2.2.1. A matter of scale	33
2.2.2. Single- and two-component materials	34
2.2.3. Robotic complexity	35
2.3. Printable materials.	36
2.3.1. Material behavior during printing	36
2.3.2. Material flow behavior.	38
2.3.3. Material behavior at rest.	39
2.3.4. Printing specifications	43
2.4. The main stages in 3D extrusion printing	43
2.4.1. Mixing	43
2.4.2. Pumping	44
2.4.3. Extrusion	46
2.4.4. Filament deposition and local stability	48
2.4.5. Overall structure stability during printing.	51
2.4.6. Elastic deformation and printing precision	55
2.4.7. Material curing during and after printing	55
2.5. Conclusion	57
2.6. References	58
Chapter 3. From Laboratory to Practice: Characterizing Fresh and Cured Printed Materials	67
Nicolas DUCOULOMBIER, Victor DE BONO, Fatima Zahraa KACHKOUCH, Yohan JACQUET and Arnaud PERROT	
3.1. Introduction.	67
3.2. Characterization of fresh materials	68
3.2.1. Laboratory formulation – specifications.	68
3.2.2. Print control in an industrial context.	77
3.3. Characterization of hardened materials	85
3.3.1. Specifications	85
3.3.2. Characterization of physical properties	85
3.3.3. Mechanical characterization of printed materials	85
3.4. Durability	91
3.5. Conclusion	93
3.6. References	93

Chapter 4. Alternative Printing Methods for Cementitious Materials	103
Alexandre PIERRE and Arnaud PERROT	
4.1. Introduction.	103
4.2. Methods with supports	105
4.2.1. In situ printed supports (permanent formwork)	105
4.2.2. Mobile support	109
4.2.3. Sacrificial support.	110
4.3. Particle bed methods	115
4.4. Support-free methods	117
4.5. Choice of process	118
4.6. Prospects and opportunities	121
4.6.1. Dissolvable temporary supports	121
4.6.2. Selective binding of aggregates with foams	121
4.6.3. Structural reinforcements	121
4.6.4. Functionally graded materials.	122
4.7. Conclusion	123
4.8. References	123
Chapter 5. Structural Applications of 3D Printing	131
Romain MESNIL, Romain DUBALLET and Olivier BAVEREL	
5.1. Introduction.	131
5.1.1. Structure design	131
5.1.2. Principles of structural design.	133
5.1.3. Chapter organization	135
5.2. Assessment of hardened material properties	135
5.2.1. Material or micro-structure?.	135
5.2.2. Toward reconciling points of view.	137
5.2.3. Orthotropic or isotropic material?	138
5.2.4. Mechanical testing	140
5.2.5. Conclusion	140
5.3. Masonry.	140
5.3.1. Reinforced masonry	141
5.3.2. Confined masonry	141
5.3.3. Shell structures	143
5.3.4. Link between process and structural behavior	145
5.3.5. Toward a stereotomic approach to printing.	146
5.4. 3D printing and reinforced concrete	147
5.4.1. Lost or collaborative formwork?	148

5.4.2. Reinforced printed concrete	150
5.4.3. Fibered printed concrete	152
5.5. Prestressing	152
5.5.1. Principle	152
5.5.2. Application	153
5.5.3. Challenges	153
5.6. Conclusion	154
5.6.1. Structural optimization and additive manufacturing	155
5.6.2. The structural language of 3D printing	155
5.7. References	156
Chapter 6. Reinforcement of Printed Structures	161
Jean-François CARON, Nicolas DUCOULOMBIER and Léo DEMONT	
6.1. Introduction, a few reminders about the reinforcement of cementitious materials	161
6.1.1. Structural reinforcement of cementitious materials	162
6.1.2. Fibered of cementitious materials	163
6.2. Reinforcement methods for additively manufactured cementitious materials and structures	168
6.2.1. A posteriori reinforcements	169
6.2.2. Mortar reinforcement.	171
6.2.3. In-line reinforcements	172
6.3. Details of a special in-line reinforcement, the flow-based-pultrusion concept	176
6.3.1. Technology.	176
6.3.2. Prototypes and devices.	176
6.3.3. Characteristics of the hardened and reinforced material	179
6.4. Conclusion and outlook.	179
6.5. References	181
Chapter 7. Numerical Simulation Tools for 3D Printing	189
Duc-Phi DO, Zeinab DIAB, Sébastien RÉMOND and Dashnor HOXHA	
7.1. Introduction.	189
7.2. Designing the geometric model of a virtual object.	190
7.3. Digital modeling of the 3D printing process	192
7.3.1. Simulation of buildability at structural scale	193
7.3.2. Simulation of the material deposition process at printed layer scale	199

7.4. Discussions on recent advances, limitations and future research directions	202
7.5. Conclusion	211
7.6. References	212
Chapter 8. Environmental Impact of 3D Concrete Printing.	219
Kateryna KUZMENKO, Charlotte ROUX and Adélaïde FERRAILLE	
8.1. Introduction.	220
8.2. 3D printing technology and case studies.	221
8.2.1. 3D extrusion–deposition printing.	221
8.2.2. Material-saving construction elements	222
8.2.3. Case study	223
8.2.4. Study issues	226
8.3. Methodology and case studies.	226
8.3.1. Life cycle assessment method.	226
8.3.2. Impact model, system boundaries and FU for the 3D concrete printing process	228
8.3.3. Impact model and FU for the constructive system 3D concrete printing process	229
8.4. Results.	231
8.4.1. Environmental impact on the scale of the printed material.	231
8.4.2. Environmental impact of the building system	232
8.5. Discussions and prospects	234
8.5.1. Alternative materials for printing.	234
8.5.2. Impact transfer.	235
8.5.3. Improving the quality and quantity of available inventory data	236
8.6. Conclusion	237
8.7. Acknowledgments.	237
8.8. References	237
List of Authors	241
Index	243
