Preface	xv
Claire GUILLE-BIEL WINDER and Teresa ASSUDE	
Part 1. Articulations between Tangible Space, Graphical Space and Geometric Space.	1
Chapter 1. The Geometry of Tracing, a Possible Link Between Geometric Drawing and Euclid's Geometry?	3
Anne-Cécile MATHÉ and Marie-Jeanne PERRIN-GLORIAN	
1.1. Introduction	3
1.2. Geometry in middle school	5
1.2.1. What underlying axiomatics?	5
1.2.2. An example	6
1.2.3. The current lack of consistency	8
1.3. Geometry of tracing, a possible link between material geometry and Euclid's geometry?	8
1.3.1. Figure visualization and figure restoration	9
1.3.2. The geometrical use of tracing instruments, a first step to make sense to an axiomatic	10
1.3.3. Distinguishing between the hypothesis and the conclusion	12
1.3.4. Restoration, description, construction of figures and geometric language .	14
1.4. Dialectics of action, formulation and validation with regards to the reproduction of figures with instruments.	15
1.4.1. Formulation situations and possible variations.	15
1.4.2. Validation situations	17
1.5. From tracing to the characterization of objects and geometric relationships . .	18
1.5.1. On the concepts of segments, lines and points	18
1.5.2. On the notion of perpendicular lines	21

1.6. Towards proof and validation situations in relation to figure restoration	27
1.6.1. Equivalence between two construction programs and the need for proof.	27
1.6.2. Validation situations involving programs for the construction of a square and introducing a proof process	29
1.7. Conclusion	31
1.8. References	32
Chapter 2. How to Operate the Didactic Variables of Figure Restoration Problems?	35
Karine VIÈQUE	
2.1. Introduction	35
2.2. Theoretical framework	35
2.2.1. Studying a specific type of problem: figure restoration	35
2.2.2. Studying the concepts involved in figure restoration problems.	37
2.3. Values of the didactic variables of the first problem family	39
2.3.1. Values of the didactic variables for the “figure” and the “beginning of the figure”	39
2.3.2. Value for the didactic variable “instruments made available”	40
2.3.3. Rules of action and theorems-in-action associated with development on the geometrical usage of the ruler	41
2.4. Conclusion	44
2.5. References	44
Chapter 3. Early Geometric Learning in Kindergarten: Some Results from Collaborative Research	47
Valentina CELI	
3.1. The emergence of the first questions.	47
3.2. Theoretical insights	48
3.2.1. Global understanding and visual perception of geometric shapes	48
3.2.2. Operative understanding and visual perception of geometric shapes.	49
3.2.3. Topological understanding and visual perception of geometric shapes	50
3.2.4. Haptic perception	51
3.2.5. Association of visual and haptic perceptions: towards a sequential understanding of geometric shapes	52
3.3. The role of language in early geometric learning	53
3.3.1. But which lexicon?	54
3.3.2. Verbal and gestural language	58
3.4. Assembling shapes	60
3.4.1. Free assembly of shapes	60
3.4.2. Assembling triangles	62
3.5. Gestures to learn	68

3.6. Conclusion	69
3.7. References	71
Chapter 4. Using Coding to Introduce Geometric Properties in Primary School	73
Sylvia COUTAT	
4.1. Coding in geometry	73
4.2. Two examples of communication activities requiring the use of coding	75
4.2.1. A co-constructed coding	75
4.2.2. Personal coding	77
4.3. Conclusion: perspectives on the introduction of coding in geometry	78
4.4. References	79
Chapter 5. Freehand Drawing for Geometric Learning in Primary School	81
Céline VENDEIRA-MARÉCHAL	
5.1. Introduction	81
5.2. Drawings in geometry and their functions.	82
5.3. Freehand drawing in research.	83
5.4. Exploring the milieu around a freehand reproduction task of the Mitsubishi symbol on a blank white page	84
5.4.1. Freehand drawing reveals a reasoning between spatial knowledge and geometric knowledge	87
5.4.2. Freehand drawing as a dynamic process to build and transform knowledge	88
5.5. Conclusion	89
5.6. References	90
Part 2. Resources and Artifacts for Teaching	93
Chapter 6. Use of a Dynamic Geometry Environment to Work on the Relationships Between Three Spaces (Tangible, Graphical and Geometrical).	95
Teresa ASSUDE	
6.1. Added value with a dynamic geometry environment: the ecological and economical point of view	95
6.2. Tangible space, graphical space and geometric space	100
6.3. Designing situations for first grade primary school.	103
6.3.1. Our choices for designing situations	104
6.3.2. Presentation of situations.	104
6.4. Analysis of the situations for the first-grade class	105
6.4.1. Instrumental dimension: perceptive–gestural level	105

6.4.2. Instrumental dimension: spatial–geometric relationships	106
6.4.3. Instrumental dimension: exploration and graphical space	107
6.4.4. Instrumental dimension: tool-geometric space symbiosis	108
6.4.5. Praxeological dimension	109
6.4.6. Praxeological dimension: observe and describe	111
6.5. Conclusion	113
6.6. References	115
Chapter 7. Robotics and Spatial Knowledge	119
Emilie MARI	
7.1. Introduction	119
7.2. Theoretical framework and development for a categorization of spatial tasks.	120
7.2.1. Spatial knowledge	120
7.2.2. Types of spatial tasks	121
7.2.3. Types of tasks and techniques	121
7.3. Research methodology	122
7.4. Analysis: reproducing an assembly	123
7.4.1. Test item	123
7.4.2. Test results.	124
7.4.3. Analysis of the results	125
7.5. Conclusion	126
7.6. References	127
Chapter 8. Contribution of a Human Interaction Simulator to Teach Geometry to Dyspraxic Pupils	129
Fabien EMPRIN and Edith PETITFOUR	
8.1. Introduction	129
8.2. General research framework	130
8.2.1. Teaching geometry	130
8.2.2. Dyspraxia and consequences for geometry	131
8.3. What alternatives are there for teaching geometry?.	132
8.3.1. Using tools in a digital environment	132
8.3.2. Dyadic work arrangement	135
8.4. Designing the human interaction simulator	138
8.4.1. General considerations	138
8.4.2. Choice of instrumented actions	139
8.4.3. Interaction choices	140
8.4.4. Ergonomic considerations	142
8.5. Initial experimental results	143
8.5.1. Data collected	144
8.5.2. Jim’s diagnostic evaluation	144

8.5.3. Analysis of the first experimentation	146
8.5.4. Conclusion.	150
8.6. References	152
Chapter 9. Research and Production of a Resource for Geometric Learning in First and Second Grade	155
Jacques DOUAIRE, Fabien EMPRIN and Henri-Claude ARGAUD	
9.1. Presentation of the ERMEL team's research on spatial and geometric learning from preschool to second grade	155
9.1.1. Origins of the research	156
9.1.2. Introduction to the chapter	156
9.2. Learning to trace straight lines	157
9.2.1. Significance of the straight line	157
9.2.2. Initial hypotheses	157
9.2.3. The RAYURE situation	159
9.2.4. Using straight lines	160
9.2.5. A few summary elements	161
9.3. Plane and solid figures	162
9.3.1. Findings and assumptions	162
9.3.2. The SQUARE AND QUASI-SQUARE situation	163
9.3.3. The emergence of criteria for comparing solids: the IDENTIFYING A SOLID situation	165
9.3.4. Identification of cube properties: the CUBE AND QUASI-CUBE situation	166
9.3.5. Progression on solids and plane figures.	167
9.4. The appropriation of research results by the resource	168
9.5. Conclusion	169
9.6. References	170
Chapter 10. Tool for Analyzing the Teaching of Geometry in Textbooks	171
Claire GUILLE-BIEL WINDER and Edith PETITFOUR	
10.1. General framework and theoretical tools	172
10.1.1. Didactic co-determination scale, mathematical and didactic organizations	172
10.1.2. Reference MO and theoretical tools for analysis	174
10.2. Analysis criteria: definition and methodology	181
10.2.1. Institutional conformity	181
10.2.2. Educational adequacy	182
10.2.3. Didactic quality	182
10.3. Introducing the analysis grid	183
10.3.1. Analysis of tasks and task types	183

10.3.2. Analysis of techniques	184
10.3.3. Analysis of knowledge	185
10.3.4. Analysis of ostensives.	186
10.3.5. Analysis of organizational and planning elements	189
10.3.6. Summary	191
10.4. Conclusion	191
10.5. References	192
Part 3. Teaching Practices and Training Issues	197
Chapter 11. Study on Teacher Appropriation of a Geometry Education Resource	199
Christine MANGIANTE-ORSOLA	
11.1. Introduction	199
11.2. Research background	200
11.2.1. Study on dissemination possibilities in ordinary education	200
11.2.2. Resource design approach	201
11.2.3. A working methodology based on assumptions	202
11.2.4. Designing a situation using the didactic engineering approach for development	205
11.3. Focus on the adaptability of this situation to ordinary education.	206
11.3.1. Details about the theoretical framework and the research question	206
11.3.2. Presentation on the follow-up of teachers, details of the research question and the methodology	207
11.3.3. Presentation of the analysis methodology	208
11.4. Elements of the analysis	209
11.4.1. Analysis a priori of the situation and anticipatory analysis of the teacher's activity	209
11.4.2. Analysis of practices	211
11.5. Conclusion	217
11.6. References	219
Chapter 12. Geometric Reasoning in Grades 4 to 6, the Teacher's Role: Methodological Overview and Results.	221
Sylvie BLANQUART	
12.1. Introduction	221
12.2. Theoretical choices and the problem statement	221
12.2.1. Geometrical paradigms	222
12.2.2. The different spaces	223
12.2.3. Study on reasoning	223
12.2.4. The role of the teacher	225
12.2.5. Problem statement.	225

12.3. Methodology	225
12.3.1. General principle	225
12.3.2. The situations	226
12.3.3. Analysis methodology	226
12.4. Conclusion	227
12.5. References	229
Chapter 13. When the Teacher Uses Common Language Instead of Geometry Lexicon	231
Karine MILLON-FAURÉ, Catherine MENDONÇA DIAS, Céline BEAUGRAND and Christophe HACHE	
13.1. Introduction	231
13.2. An attempt to categorize the uses of common vernacular terms in place of geometry lexicon terms within teacher discourse	232
13.2.1. The phenomenon of didactic reticence	232
13.2.2. The phenomenon of semantic analogy: comparison with common concepts to construct meaning for mathematical knowledge.	233
13.2.3. The phenomenon of lexical competition: use of common vernacular terms to designate common concepts.	234
13.2.4. The phenomena of repeating pupil formulations	235
13.2.5. The phenomenon of didactic repression	236
13.3. Conclusion	237
13.4. References	238
Chapter 14. The Development of Spatial Knowledge at School and in Teacher Training: A Case Study on 1, 2, 3... imagine!	241
Patricia MARCHAND and Caroline BISSON	
14.1. Introduction and research question	241
14.2. Conceptual framework.	243
14.2.1. Components set to address SK in primary school	244
14.2.2. Levels of abstraction that value SK	245
14.2.3. Main variables in situations where SK is valued	246
14.3. Presentation of the activity 1, 2, 3 ... imagine!	247
14.4. Experiments with this activity in primary school and in teacher training in Quebec	251
14.4.1. Teaching sequence experimented in primary school	251
14.4.2. Teaching sequence tested in teacher training	254
14.5. Experiment results	255
14.5.1. Experiment results of the teaching sequence in primary school	255
14.5.2. Experiment results of this teaching sequence in teacher training	257
14.6. Conclusion	259
14.7. References	260

Chapter 15. What Use of Analysis a priori by Pre-Service Teachers in Space Structuring Activities?	265
Ismail MILI	
15.1. Introduction – an institutional challenge of transposing didactic knowledge	265
15.1.1. Choice of external transposition: institutional constraints	265
15.2. Theoretical framework.	267
15.2.1. Choice of internal transposition: the moments of the study of the analysis a priori	268
15.3. Research questions	269
15.4. Methodology	269
15.4.1. Selection of activities and brief analysis.	270
15.5. Results.	272
15.6. Conclusion	273
15.7. References	273
 Part 4. Conclusion and Implications	 275
 Chapter 16. Questions about the Graphic Space: What Objects? Which Operations?	 277
Teresa ASSUDE	
16.1. Semiotic tools of geometric work and graphic space	277
16.2. Graphic space: graphic expressions, denotation and meaning	280
16.2.1. How can we define the graphic space?	280
16.2.2. Which objects in the graphic space?	280
16.2.3. Graphic expressions: which operations?.	282
16.3. References	285
 Chapter 17. Towards New Questions in Geometry Didactics	 289
Claire GUILLE-BIEL WINDER and Catherine HOUEMENT	
17.1. Current questions in geometry didactics	289
17.2. Continuities and breaks in the teaching of geometry	291
17.2.1. Institutional continuity?.	291
17.2.2. Theoretical continuity from “geometry of tracing” to “abstract geometry”?.	291
17.2.3. Praxis continuity from the “geometry of tracing“ to “abstract geometry”	294
17.3. Articulation between resources, practices and teacher training.	297
17.4. References	299
