Introduction	ix
Chapter 1. Graphs	1
1.1. Graph theory: a brief history	1
1.2. Basic definitions	6
1.3. Different types of graphs	6
1.4. More on the list of graphs	9
1.5. Graphs and vertices	11
1.6. Some operations on graphs	13
1.7. Graph isomorphisms	15
1.7.1. Self-complementary graphs	15
1.7.2. Properties of self-complementary graphs	16
1.8. Symmetric and asymmetric graphs	17
1.9. Extremal graphs	20
1.10. Independence, non-separability, reconstruction conjecture	23
Chapter 2. Philosophical Graphs	29
2.1. Ancient mappings	29
2.2. Chinese tetragrams	33
2.3. Pythagorism and pentagram	33
2.4. n -grams and some figures of the world	35
2.5. Graphs and classical systematicity	41
2.6. Towards a new kind of systematicity	52
2.6.1. Non-Hamiltonian and non-Eulerian philosophies	52
2.6.2. Pancyclic graphs and Metahegelianism	57
2.7. Non-pythagorism and arrangement of lines	58
2.7.1. Levi graphs of line arrangements	62
2.7.2. Line arrangements of curve lines	65
2.7.3. Hyperbolic graphs	67

Chapter 3. Order and Its Philosophical Use	73
3.1. The mathematical notion of order: a brief history	74
3.2. The idea of “well-ordering”	76
3.3. Quasiorders (or preorders)	79
3.4. Partial orders	81
3.4.1. The notion of well partial order	84
3.4.2. Linear extension of a poset	84
3.4.3. Well partially orderings	85
3.5. Trees	85
3.5.1. A zoo of infinite trees	86
3.5.2. Ordinal infinite classifications	87
3.6. Moral problems in a finite world	87
3.7. Order versus circularity	92
3.8. Conclusion	96
Chapter 4. Towards a Formal Philosophy	99
4.1. Asenjo’s systems and Dubarle’s formalization of Hegelianism	99
4.1.1. Asenjo’s systems and Dubarle’s case	100
4.1.2. Dubarle, Parmenides’ thought and Hegel	102
4.1.3. Projective algebras	103
4.2. Some criticisms	106
4.3. Porphyry and the neoplatonist mode of thought	107
4.4. A variant of Dubarle’s formalism	109
4.5. Quasi-Hegelian systems	112
4.6. Philosophical thinking and finite projective geometry	114
4.7. Other algebras for philosophical thinking	116
4.8. Models derived from geometry and algebraic geometry	117
4.9. Conclusion	120
Chapter 5. Philosophical Transformations	121
5.1. The paradox of a metasytem	121
5.2. In search of an algebra	137
Chapter 6. Concepts and Topology	141
6.1. Formal concepts	141
6.2. Fuzzy concepts	143
6.3. The case of philosophical concepts	144
Chapter 7. The Problem of the Infinite	155
7.1. The arithmetic of infinite cardinals	156
7.2. The question of large cardinals	158

7.3. Woodin’s program	163
7.3.1. Woodin I: CH would be false	163
7.3.2. Woodin II: CH may be true	165
7.3.3. Ultimate L and CH	167
7.4. Infinite and philosophy	167
Chapter 8. In Search for a New Philosophy	171
8.1. The finite case	171
8.2. The infinite case	176
Chapter 9. Extension of Structuralism and Negative Theology	181
9.1. Complementarity graphs	182
9.2. Order relation, ordered set	184
9.3. Graphs associated with a partially ordered set	185
9.4. Complementarity and incomparability graphs of a poset	187
9.5. Boolean representation of a poset	187
9.6. Case of lattices	189
9.6.1. Case of Boolean lattices	191
9.6.2. Generalization: Boolean lattices as n -cubes	193
9.7. Consequences for negative theology	196
Chapter 10. From Fuzzy Graphs to Neutrosophic Graphs	201
10.1. Fuzzy sets	201
10.2. Fuzzy graphs	204
10.3. Intuitionistic fuzzy set theory	206
10.4. Neutrosophy	208
10.5. Single-valued neutrosophic sets and graphs	211
Conclusion	215
