|--|----|
| <b>Chapter 1. Introduction</b> . . . . .   | 1  |
| <b>Chapter 2. Physicochemical and Microbiological<br/>Composition of Raw Water</b> . . . . . | 9  |
| 2.1. Water resources . . . . .   | 9  |
| 2.1.1. Physicochemical parameters . . . . .  | 10 |
| 2.1.2. Algae (including cyanobacteria and cyanotoxins). . . . .                              | 18 |
| 2.1.3. Tastes and odors . . . . .  | 22 |
| 2.1.4. Micropollutants . . . . .   | 24 |
| 2.2. Microbiology . . . . .  | 28 |
| 2.2.1. Bacteria. . . . .   | 29 |
| 2.2.2. Viruses . . . . .   | 30 |
| 2.2.3. Parasites (Cryptosporidium and Giardia) . . . . .                                     | 32 |
| 2.3. Quality of water intended for human consumption . . . . .                               | 34 |
| 2.3.1. Microbiological parameters . . . . .  | 35 |
| 2.4. References . . . . .  | 42 |
| <b>Chapter 3. Aeration and Stripping</b> . . . . .   | 43 |
| 3.1. Cascade aeration . . . . .  | 43 |
| 3.1.1. Characteristics . . . . .   | 44 |
| 3.2. Operating principle of a cascade aerator system . . . . .                               | 45 |
| 3.2.1. Data . . . . .  | 49 |
| 3.2.2. Goals . . . . .   | 49 |
| 3.2.3. Results . . . . .   | 49 |

---

|   |           |
|---|-----------|
| 3.3. Aeration by fine bubble diffusers . . . . .                      | 51        |
| 3.3.1. Air diffusers . . . . .  | 52        |
| 3.3.2. Air insufflation by oxytube . . . . .                          | 52        |
| 3.4. Stripping . . . . .  | 53        |
| 3.4.1. Stripping tower design . . . . .                               | 54        |
| 3.4.2. Description. . . . .   | 58        |
| 3.4.3. CO <sub>2</sub> removal. . . . .                               | 60        |
| 3.4.4. Tetrachlorethylene and trichlorethylene removal . . . . .      | 61        |
| 3.5. Synthesis of aeration systems . . . . .                          | 61        |
| 3.6. References . . . . .   | 62        |
| <br>  |           |
| <b>Chapter 4. Coagulation–flocculation . . . . .</b>                  | <b>63</b> |
| 4.1. Colloidal matter . . . . .                                       | 63        |
| 4.2. Coagulation. . . . .   | 65        |
| 4.2.1. Double-layer compression. . . . .                              | 70        |
| 4.2.2. Adsorption and interparticle bridging (flocculation) . . . . . | 71        |
| 4.3. Flocculation . . . . .   | 74        |
| 4.3.1. Perikinetic flocculation . . . . .                             | 74        |
| 4.3.2. Orthokinetic flocculation . . . . .                            | 76        |
| 4.3.3. The influence of agitation . . . . .                           | 79        |
| 4.3.4. G and t . . . . .  | 81        |
| 4.4. Coagulants . . . . .   | 85        |
| 4.4.1. Metallic coagulants. . . . .                                   | 85        |
| 4.4.2. Synthetic organic coagulants . . . . .                         | 97        |
| 4.5. Flocculants . . . . .  | 99        |
| 4.5.1. Natural organic and synthetic flocculants. . . . .             | 99        |
| 4.5.2. Flocculation adjuvants . . . . .                               | 105       |
| 4.6. Factors affecting coagulation and flocculation . . . . .         | 105       |
| 4.6.1. Influence of water temperature . . . . .                       | 105       |
| 4.6.2. Influence of pH . . . . .                                      | 106       |
| 4.6.3. Coagulation and flocculation times . . . . .                   | 111       |
| 4.7. How to choose the best coagulant? . . . . .                      | 111       |
| 4.7.1. How to choose the optimal dose of coagulant? . . . . .         | 113       |
| 4.8. Residual aluminum . . . . .                                      | 115       |
| 4.9. Alkalinity consumption. . . . .                                  | 116       |
| 4.9.1. Aluminum and alkalinity . . . . .                              | 117       |
| 4.9.2. Iron and alkalinity . . . . .                                  | 120       |
| 4.10. Reduction efficiency of some water constituents . . . . .       | 125       |
| 4.10.1. Turbidity and SS . . . . .                                    | 125       |
| 4.10.2. Microorganism removal . . . . .                               | 128       |

---

|  |            |
|--|------------|
| 4.11. Jar tests . . . . .                                    | 130        |
| 4.11.1. The specific case of jar test for Actiflo® . . . . . | 134        |
| 4.12. References. . . . .                                    | 138        |
| <br>   |            |
| <b>Chapter 5. Settling . . . . .</b>                         | <b>143</b> |
| 5.1. The principles of settling . . . . .                    | 143        |
| 5.2. Horizontal settlers . . . . .                           | 145        |
| 5.2.1. Principle . . . . .                                   | 145        |
| 5.2.2. Design . . . . .                                      | 149        |
| 5.2.3. Implementation . . . . .                              | 150        |
| 5.3. Lamella settlers . . . . .                              | 152        |
| 5.3.1. Theory and principle . . . . .                        | 153        |
| 5.3.2. Basic design for lamella settlers . . . . .           | 156        |
| 5.3.3. Implementation . . . . .                              | 162        |
| 5.4. Veolia technologies . . . . .                           | 165        |
| 5.4.1. Lamella settlers: Multiflo® settler . . . . .         | 165        |
| 5.4.2. Ballasted floc settlers. . . . .                      | 176        |
| 5.5. References . . . . .                                    | 198        |

| <b>Chapter 6. Flotation . . . . .</b>                        | <b>203</b> |
| 6.1. The scope of DAF . . . . .                              | 204        |
| 6.2. The main stages of a flotation process . . . . .        | 205        |
| 6.2.1. Coagulation . . . . .                                 | 205        |
| 6.2.2. Flocculation . . . . .                                | 206        |
| 6.2.3. Flotation . . . . .                                   | 206        |
| 6.3. The fundamental mechanisms of flotation. . . . .        | 207        |
| 6.3.1. Coagulation . . . . .                                 | 209        |
| 6.3.2. Flocculation . . . . .                                | 209        |
| 6.3.3. Contact zone. . . . .                                 | 210        |
| 6.3.4. Separation zone . . . . .                             | 228        |
| 6.4. Design parameters . . . . .                             | 232        |
| 6.4.1. Coagulation . . . . .                                 | 233        |
| 6.4.2. Flocculation . . . . .                                | 233        |
| 6.4.3. Flotation zone . . . . .                              | 234        |
| 6.4.4. Contact time . . . . .                                | 239        |
| 6.4.5. Temperature . . . . .                                 | 239        |
| 6.4.6. Air saturation tank . . . . .                         | 239        |
| 6.4.7. Mass balance . . . . .                                | 243        |
| 6.4.8. Recirculation and injection nozzles . . . . .         | 244        |

|  |     |
|--|-----|
| 6.5. Operating parameters affecting flotation performance . . . . .      | 245 |
| 6.5.1. Choice of coagulant . . . . .                                     | 245 |
| 6.5.2. Rise velocity . . . . .   | 248 |
| 6.5.3. Contact time . . . . .  | 248 |
| 6.5.4. Bubble volume concentration . . . . .                             | 248 |
| 6.5.5. Gas solubility . . . . .  | 249 |
