
Contents

Abbreviations	ix
Introduction	xvii
Chapter 1. Overview of Organic Semiconductors	1
1.1. Organic semiconductors.	2
1.2. Doping of organic semiconductors	4
1.3. Organic electronic devices	6
1.3.1. Architectures of organic devices.	6
1.3.2. Organic light-emitting diodes (OLEDs).	11
1.3.3. Organic solar cells (OSCs or OPVs)	13
1.3.4. Organic field-effect transistors (OFETs)	15
Chapter 2. Defects in Materials	19
2.1. Order and disorder.	19
2.2. Crystalline semiconductors	20
2.2.1. Localized states	21
2.2.2. Density of states (DOS)	22
2.3. Amorphous semiconductors	22
2.3.1. Localized states	23
2.3.2. Density of states (DOS)	24
2.4. Organic semiconductors.	25
2.4.1. Polymer structure	26
2.4.2. Polymer crystallinity	27
2.4.3. Defects in conjugated polymers	28
2.4.4. Defects in small-molecule crystals	29
2.4.5. Localized states	30

2.4.6. Density of states	31
2.5. Distribution of the energetic states	32
Chapter 3. Defects and Physical Properties of Semiconductors	35
3.1. Carrier transport in organic semiconductors	35
3.1.1. Hopping conduction	37
3.1.2. Uniform density of states model	38
3.1.3. Non-uniform density of states models	39
3.2. Effects of defects on the carrier transport	44
3.2.1. Traps and recombination centers	44
3.2.2. Trapping mechanisms and trap parameters	46
3.3. Optical properties of semiconductors and defects	56
3.3.1. Defects and absorption	56
3.3.2. Defects and luminescence	59
Chapter 4. Techniques for Studying Defects in Semiconductors	65
4.1. Electron spin resonance (ESR)	65
4.1.1. Basic concepts of ESR	66
4.1.2. Interpretation of ESR line	67
4.1.3. Electron nuclear double resonance (ENDOR)	68
4.1.4. Investigation of defects using the ESR technique	69
4.2. Optical techniques	72
4.2.1. Fluorescence spectroscopy (FL)	72
4.2.2. Thermally stimulated luminescence (TSL) spectroscopy	75
4.3. Electrical techniques	86
4.3.1. Thermally stimulated current (TSC) technique	87
4.3.2. Current–voltage measurements: space charge-limited current (SCLC)	96
4.3.3. Impedance spectroscopy (IS)	110
4.3.4. Deep-level transient spectroscopy (DLTS)	134
4.3.5. Time of flight (TOF) and charge carrier extraction by linearly increasing voltage (CELIV) techniques	152
Chapter 5. Defect Origins	159
5.1. Defects in organic semiconductors	159
5.1.1. Structural defects	160
5.1.2. Impurity defects	160
5.2. Defects in organic devices	162
5.2.1. Defects from the semiconductor	163
5.2.2. Defects from the surface and the interface	164
5.2.3. Defects from diffused impurities	168

Chapter 6. Defects, Performance and Reliability of Organic Devices	173
6.1. Impact of defects on the performance of organic devices	174
6.1.1. Defects and efficiency of OLEDs	174
6.1.2. Defects and efficiency of OPVs	176
6.1.3. Defects and performance of OFETs	181
6.2. Impact of defects on the stability of organic devices	183
6.2.1. Overview of degradation mechanisms in organic semiconductors and devices	184
6.2.2. Defects and degradation of organic semiconductor and devices	188
Future Prospects	217
References	223
