Introduction	xix
Olivier RAGUENEAU, Vanessa LEA, Isabelle CHARPENTIER, Claire TITO DE MORAIS and Mathieu BONNEFOND	
Chapter 1. Challenges and Mutations Confronting RZA	1
Vanessa LEA, Olivier RAGUENEAU, Isabelle CHARPENTIER, Claire TITO DE MORAIS and Mathieu BONNEFOND	
1.1. A network for ZA	1
1.2. Polymorphism and mutations	4
1.2.1. Perpetual change from an institutional perspective	4
1.2.2. A map that is constantly evolving	15
1.2.3. Evolution of unifying concepts for the ZA	17
1.3. Interdisciplinarity and interactions with local stakeholders: foundations that are never questioned, but sometimes difficult to implement.	21
1.3.1. Interdisciplinarity above all else	23
1.3.2. Transdisciplinarity: the growing hybridization of research and knowledge	24
1.4. Variations and constants	27
1.5. References	28

Chapter 2. The Socio-Hydrosystem Investment by ZA Seine 33
 Laurence LESTEL, Cédric FISSON, Michel MEYBECK, Josette GARNIER
 and Ghassan CHEBBO

2.1. Characteristics and stakeholders of the Seine socio-hydrosystem	34
2.2. Research on the Seine Basin, from PIREN-Seine (1989) to ZA Seine in 2015	36
2.3. The ZA Seine since 2015: a shared vision of the socio-hydrosystem	38
2.4. The ZA Seine: a space for strengthening interactions between researchers and stakeholders	42
2.4.1. Modeling the human–Earth–sea continuum: a tool for unifying dialogue	42
2.4.2. The Humanities and Social Sciences: successful integration . . .	44
2.4.3. Ecological restoration: a mechanism for reconnecting stakeholders	45
2.4.4. A responsive community serving the Seine.	46
2.5. The ZA Seine of tomorrow: challenges ahead	47
2.6. Acknowledgments	47
2.7. References	48

**Chapter 3. The Zone Atelier Antarctique et Terres Australes
 (ZATA): Scientific and Geopolitical Issues 51**
 Romain GEORGES, Charles-André BOST, Christophe GUINET, Paul TIXIER,
 Camille MAZÉ, Jean-Patrice ROBIN, Akiko KATO, Yan ROBERT-COUDERT
 and David RENAULT

3.1. The boundaries of ZATA.	52
3.1.1. The birth of ZATA	52
3.1.2. Institutional, scientific and geographic context of the ZATA . . .	53
3.1.3. Long-term observations as a source of territorial anchoring and transdisciplinarity.	55
3.2. A unique tool for understanding and describing biodiversity and its dynamics.	58
3.2.1. Systematics, biogeography and definition of ecoregions	58
3.2.2. From individual monitoring to environmental monitoring.	59
3.2.3. Bio-logging: from initial electronic tracking to long-term population monitoring	59
3.2.4. Unique contributions to the understanding of biological invasions	61
3.2.5. Observations to highlight conflicts of land use.	63

3.3. Studying biodiversity and polar ecosystems through the prism of value	64
3.4. Beyond the academic sphere, ZATA at the heart of societal issues: expertise and training through research	65
3.5. Prospects	66
3.6. References	67

Chapter 4. Zone Atelier Rhône Basin (ZABR): Sharing Perspectives on Socio-Hydrosystems

Anne CLÉMENS, Emeline COMBY, Anne HONEGGER, Hervé PIÉGAY, Laurent SIMON, Nicolas LAMOUROUX and Pierre MARMONIER

4.1. The boundaries of the Zone Atelier Rhône Basin	70
4.1.1. A brief history: the PIREN Rhône adventure.	70
4.1.2. The Rhône river basin: a diverse territory facing multiple challenges.	71
4.2. The heart of ZABR: experimenting to understand and take action for socio-hydrosystems	73
4.2.1. ZABR, an experimental dimension in the broadest sense	73
4.2.2. Interdisciplinarity: a conscious approach to understanding the complexity of social ecosystems.	75
4.2.3. A look back at some scientific adventures	77
4.3. A framework for collaboration between scientists and stakeholders in the Basin	79
4.3.1. A robust federative structure	79
4.3.2. A framework for close partnership with local stakeholders and researchers	80
4.4. ZABR: passing on knowledge.	83
4.5. Challenges for the future	85
4.6. References	85

Chapter 5. The Zone Atelier Armorique (ZAAr): A Long-Term Observation Site Focused on the Landscape

Cendrine MONY, Audrey ALIGNIER, Jean NABUCET, Jacques BAUDRY, Françoise BUREL and Thomas HOUET

5.1. Outline of the Zone Atelier Armorique: birth and development	88
5.1.1. A history rooted in the bocage: the Agricole Nord site (Pleine-Fougères) and its evolution	88
5.1.2. The rise of urban ecology and climate science: the creation of the urban site in 2011	91

5.1.3. Emergence of challenges surrounding the agroecological transition: certification of the southern agricultural site in 2022	92
5.1.4. A multi-scale, multi-site structure to address societal and research challenges	93
5.2. The landscape at the center of ZA Armorique research	94
5.2.1. Landscape: a study tool supporting interdisciplinarity	94
5.2.2. Landscape heterogeneity in space and time.	95
5.2.3. A fertile ground for developing tools and methods	96
5.3. The Zone Atelier Armorique: a program in close partnership with various stakeholders	97
5.3.1. A diverse network of stakeholders	97
5.3.2. A spotlight on the relationship between farmers and researchers	97
5.3.3. Toward the co-construction of research with management partners.	98
5.4. Toward the deployment of networked research on a European scale.	99
5.5. An effort to promote research work within and beyond the academic sphere.	100
5.5.1. Research addressing major societal issues in the environment.	100
5.5.2. An observation system at the core of training	101
5.6. Conclusion and prospects	101
5.7. References	102

Chapter 6. The Zone Atelier Loire (ZAL): Long-Term Observation of a Social-Hydrosystem 105

Sylvie SERVAIN, Nathalie CARCAUD, Emmanuèle GAUTIER,
Nicolas LEGAY and Mathieu BONNEFOND

6.1. A collective behind the Zone Atelier	105
6.2. Construction and development of the Zone Atelier Loire.	107
6.3. Long-term research sites to promote scaling and interdisciplinarity	111
6.3.1. The spatiotemporal scales necessary for understanding social–environmental issues	111
6.3.2. From an anthroposystem to a social ecological system.	112
6.4. Questions rooted in the territory.	116
6.4.1. Connections built with managers.	116
6.4.2. Toward transdisciplinarity.	118

6.5. Conclusion	120
6.6. Acknowledgments	121
6.7. References	121

Chapter 7. The Zone Atelier du bassin de la Moselle (ZAM): The Social Ecological Trajectory of Water Resources 125

Cécile FRIES-PAIOLA, Sylvie DOUSSET, Emmanuelle MONTARGES-PELLETIER,
Philippe DURAND and Arnaud LEGOUT

7.1. Preserving water, a resource under pressure in an industrial territory	126
7.1.1. The Nancy International Water Center: the origins of the ZAM	126
7.1.2. A public interest group promoting the ZAM project	127
7.1.3. From the Nancy metropolitan area to the Moselle Basin, contrasting landscapes along the Sillon Lorrain.	128
7.2. Understanding the diversity of water issues, approaches and methods	129
7.2.1. Structuring questions and methodological approaches	130
7.2.2. Transdisciplinarity at the heart of ZAM's work since its creation	133
7.3. Impacts of ZAM's work within the local territory: a complex ambition.	135
7.3.1. Difficult and limited ripple/spillover effects on the Orne Basin.	136
7.3.2. The outcome of a remediation initiative for agricultural pollution.	136
7.3.3. Results contributing to the development of new tools for monitoring aquatic environments and treatment processes	138
7.4. Developing interdisciplinary research to broaden questions and enrich interactions with stakeholders	138
7.4.1. A history of the evolution of disciplines present in the ZAM . . .	139
7.4.2. A strengthening of the role of the humanities and social sciences within the ZAM since 2020	139
7.5. Prospects	141
7.6. References	142

Chapter 8. Between Alpine Pastures and European Research Infrastructure: A History of the Zone Atelier Alpes (ZAA)	145
Isabelle ARPIN, Jérôme POULENARD, Mathilde RATOUIS, Vincent AUGÉ, Pierre-Eymard BIRON, Richard BONET, Philippe CHOLER, Jérôme FORÊT, Sandra LAVOREL, Thomas SPIEGELBERGER and Jean-Gabriel VALAY	
8.1. The chronology of the ZAA	146
8.1.1. Building up to the creation of the ZAA	146
8.1.2. Since the creation of the ZAA	149
8.2. Studying climate–human–biodiversity interactions in Alpine SES . . .	154
8.2.1. From Alpine pastures to a diversity of Alpine SES	154
8.2.2. From the present to the long-term	157
8.2.3. Instruments and techniques	159
8.3. A ZA firmly embedded in national and European research infrastructures.	159
8.3.1. A ZA linked to other ZA.	159
8.3.2. Colocalization of research infrastructure at the Lautaret Pass	160
8.3.3. The lengthy process of applying for eLTER-RI certification . . .	160
8.4. Conclusion	161
8.5. References	162
 Chapter 9. Landscape Agroecology in the Zone Atelier Plaine & Val de Sèvre (ZA PVS)	165
Vincent BRETAGNOLLE, Elsa BERTHET and Sabrina GABA	
9.1. The origins of the ZA PVS: the conservation of farmland birds	166
9.1.1. The Montagu’s Harrier and other emblematic farmland species	166
9.1.2. Trophic ecology and species conservation	166
9.2. Outlines of the future Zone Atelier: delimitation of the territory and relations with farmers	167
9.2.1. Beyond the species themselves, their habitats	167
9.2.2. Natura 2000 and the experimental management of agricultural landscapes.	167
9.3. Zone Atelier certification (2009)	168
9.3.1. Evolution of the stakeholder network involved, and involvement of the residents, businesses and NGOs	170
9.3.2. Experimenting phasing out pesticides with and for farmers through action research	172

9.3.3. Experimenting with the role of biodiversity in agricultural production.	172
9.3.4. Experimenting with the role of landscape elements on biodiversity, its functions and agricultural and beekeeping production.	173
9.3.5. Dissemination to public stakeholders and decision makers	173
9.4. The ZA PVS's ten-year project (2018–2028): transforming the territory to increase resilience through nature-based solutions	174
9.4.1. Transform'Actions: from action research to transformative research	176
9.4.2. Promoting agroecological transition across the territory	176
9.4.3. Catalyzing the transformation of the agri-food system through changes in food practices	177
9.4.4. Improving the health of the territory.	177
9.5. Conclusion	178
9.6. Acknowledgments.	179
9.7. References	179

Chapter 10. Zone Atelier Environnementale Urbaine (ZAEU): Collective Solutions to Drive Transition? 183
Sandrine GLATRON, Isabelle CHARPENTIER and Nadège BLOND

10.1. The legacy of environmental research programs	184
10.1.1. 1980–2013: hydroecological research and the birth of interdisciplinarity	186
10.1.2. International, national and local “urban” focus.	188
10.2. Implementing transdisciplinary action research.	190
10.2.1. Researchers and managers: converging goals.	191
10.2.2. Shared governance	191
10.2.3. Initiating dialogue between multiple partners: the example of water in the city	192
10.3. Consolidated interdisciplinarity on shared themes	194
10.3.1. Promoting interdisciplinarity and acculturation among researchers	194
10.3.2. Cities: sinks or sources of biodiversity?	195
10.4. How can we build, share and disseminate knowledge accumulated in a territory? For what purposes?	196
10.4.1. Pooling resources, sharing experience and knowledge	196
10.4.2. Discussion, developing practices in the territory, transferring the research results	198

10.5. Conclusion and prospects.	199
10.6. References.	200

**Chapter 11. Zone Atelier Hwange: An African Initiative
on the Interfaces of Protected Areas. 203**

Hervé FRITZ, Mathieu BOURGAREL, Marion VALEIX,
Simon CHAMAILLÉ-JAMMES, Eve MIGUEL and Chloé GUERBOIS

11.1. Genesis of the <i>Zone Atelier Hwange</i>	204
11.1.1. Groundbreaking work anchored in Hwange National Park.	204
11.1.2. The porosity of the system as an initial explicit link between a protected area and its periphery	207
11.1.3. The interface with protected areas as a subject of social–ecological research.	208
11.2. Sustainable management of biodiversity and natural resources as a guiding principle for increasingly interdisciplinary research.	210
11.2.1. Ecology and engineering of elephants as a catalyst for multidisciplinary research.	210
11.2.2. Interactions at the interface of protected areas and management issues at the heart of the emergence of interdisciplinarity	211
11.2.3. Sharing and sustainable management of natural resources in a changing climate: interdisciplinary research	213
11.3. From partnerships to transdisciplinarity: deeper roots in the social–ecological system.	214
11.3.1. Training and knowledge exchange	214
11.3.2. A diversity of actors against a backdrop of political and climate crisis: researchers advocating for critical issues	215
11.3.3. Toward co-construction of research with local stakeholders	215
11.4. Conclusion and perspectives: a Zone Atelier to promote engaged research and the values of the Global South.	216
11.4.1. Toward more inclusive and transformative engaged research	216
11.4.2. A platform to promote the values and visions of the Global South.	217
11.5. References.	217

Chapter 12. Zone Atelier Brest-Iroise: A Reflective Look Back at 20 Years of Knowledge Hybridization	221
Adélie POMADE, Pierre STÉPHAN, Olivier RAGUENEAU, Françoise GOURMELON, Mélanie RAIMONET, Alain HÉNAFF, Nicolas LE DANTEC and Stéphane POUVREAU	
12.1. Origins of the Zone Atelier Brest-Iroise	222
12.2. An exploration of local challenges through the lens of interdisciplinarity	225
12.2.1. Research combining water quality, biodiversity and resources	225
12.2.2. Research exploring the past trajectories of socio-ecological systems	226
12.3. Co-construction of activities and research with local stakeholders	227
12.3.1. Marine erosion and submersion hazards, systemic vulnerability, and coastal risk management	227
12.3.2. Another example of transdisciplinarity in marine resource management: the ecological restoration of the flat oyster	230
12.3.3. The evolution of ZABrI's governance	231
12.4. The Zone Atelier Brest-Iroise is firmly focused on the future	233
12.5. References	234
 Chapter 13. Zone Atelier Uranifère Territories (ZATU): An Observatory of Life under Ionizing Radiation	237
Vincent BRETON, Clarisse MALLET, Patrick CHARDON, Sylvia BECERRA, Gilles MONTAVON, Joan ARTIGAS-ALEJO, Mireille DEL NERO, Aude BEAUGER and Télésphore SIME-NGANDO	
13.1. The origins of the ZA	238
13.2. The creation of the ZATU	240
13.2.1. The governance of ZATU	243
13.2.2. The originality of ZATU	244
13.3 The description of the ZA	245
13.3.1. Site descriptions	245
13.3.2. Key issues and avenues of research	247
13.4. Description and developments in interdisciplinary and transdisciplinary approaches	250
13.4.1. Hydrothermalism: example of the joint development of a new issue in ZATU	252

13.5. Prospects on the 2025–2030 five-year period	252
13.6. References.	253

**Chapter 14. The Zone Atelier Pyrénées-Garonne (ZA PYGAR):
From the Pyrenees to the Agricultural Plains, a Territory
Drained by the Garonne River**

255

Jean-Luc PROBST, Annie OUIN, Vanessa LEA, Morgane GIBERT,
Tiphaine TALLEC and Arnaud ELGER

14.1. Genesis and evolution of the ZA PYGAR	257
14.1.1. A scientific platform dating back to the 1970s	257
14.1.2. The emergence of the ZA PYGAR	260
14.2. Relations between the ZA PYGAR and society.	261
14.2.1. Toward an initial structuring of relations between researchers and socio-economic partners	261
14.2.2. Strengthening relationships between researchers and local stakeholders.	262
14.3. Long-term environmental monitoring: a strength of the ZA PYGAR	264
14.3.1. Biodiversity monitoring in Aurignac.	265
14.3.2. Monitoring of critical zone functioning in agrosystems at the Auradé site	265
14.3.3. Development of new observation tools	267
14.4. The humanities and social sciences (HSS) over time: a distinctive feature of the ZA PYGAR	268
14.4.1. A commitment to grounding socioecological dynamics across millennial to secular timescales	268
14.4.2. Major projects within the “long-term” theme.	269
14.4.3. The evolution of the “long-term” theme.	270
14.5. Conclusion and prospects.	270
14.6. References.	271

**Chapter 15. Argonne: The Origins of the Zone Atelier
Environnementale Rurale (ZARG)**

275

Jon Marco CHURCH, Jean-Yves GEORGES, Emmanuel GUILLON,
Philippe HAMMAN, Rémi HELDER, Marie-Christine JANNIN,
Thomas QUINTAINE and Stéphanie SAYEN

15.1. The Argonne context	276
15.1.1. A particular view of the Argonne	276
15.1.2. The Argonne, a land of ecology and hunting	277

15.1.3. A story of geographers, geologists and archaeologists	279
15.2. The origins of the Zone Atelier	280
15.2.1. From a Regional Nature Park (PNR) project to a Zone Atelier (ZA)	280
15.2.2. The birth of the 15th Zone Atelier	283
15.3. The early days of the Zone Atelier Argonne.	284
15.3.1. The organization of the ZARG	284
15.3.2. Co-constructed research projects	286
15.4. Conclusion and prospects.	289
15.5. References.	290

**Chapter 16. The Zone Atelier Camargue (ZACAM): Taking
Action on Health and Environmental Issues. 293**
Nathalie BOUTIN, Raphaël MATHEVET, Delphine DESTOUMIEUX-GARZÓN,
Marion VITTECOQ and Frédéric THOMAS

16.1. The greater Rhône delta: a context of transition and targeted research expectations.	294
16.1.1. The Camargue: an area prone to epidemic outbreaks	294
16.1.2. A need for targeted research.	296
16.2. The Camargue: a research territory	298
16.2.1. Long-term research in the Camargue.	298
16.2.2. The collaboration between Tour du Valat and CNRS	301
16.3. The early days of ZACAM.	301
16.3.1. Identifying and collectively exploring areas of research	302
16.3.2. Description of priority research areas	304
16.4. The co-construction challenge of the ZACAM	305
16.4.1. Involving stakeholders in new issues.	306
16.4.2. Integration within the RZA and other networks	307
16.5. References.	309

**Chapter 17. Synthesis and Transformative Perspectives,
Implications for Higher Education and Research
Institutions (HERI). 313**
Olivier RAGUENEAU, Vanessa LEA, Isabelle CHARPENTIER,
Claire TITO DE MORAIS and Christophe PISCART

17.1. Initial synthesis: origin of ZA, interdisciplinarity and collaborative research with stakeholders	314
17.1.1. Emergence of ZA and evolution of the scope of the RZA	314

17.1.2. Interdisciplinarity	316
17.1.3. Transdisciplinarity and the role of stakeholders in the governance of ZA	319
17.2. Transformative perspective and the challenge of scaling	323
17.2.1. From adaptation to transformation	323
17.2.2. The importance of experimentation	325
17.2.3. Transitioning to “scaling diverse”	327
17.3. Implications for HERI.	333
17.3.1. Research funding and evaluation	334
17.3.2. University-level education	336
17.3.3. Scientific engagement	338
17.4. References.	341
List of Authors	347
Index	361
