Author Presentation	xi
Preface	xv
Marianne SARAZIN	
Part 1. Growing with Artificial Intelligence	1
Introduction to Part 1	3
Marianne SARAZIN	
Chapter 1. From Human to Artificial Intelligence	5
Bruno SALGUES	
1.1. The different forms of intelligence	5
1.1.1. Human intelligence typologies.	5
1.1.2. Artificial intelligence (AI) and human intelligence	5
1.1.3. Object intelligence and human assistance.	5
1.2. History of “artificial” intelligence	7
1.2.1. Mechanical forms.	7
1.2.2. The desire to model neurons and cybernetics.	8
1.2.3. The arrival of computers	9
1.2.4. Different uses of artificial intelligence in healthcare.	12
1.2.5. Automated fields or scored answers.	15
1.2.6. Expert systems	16
1.2.7. Vector differentiation or vector forest.	17
1.2.8. Convolution matrix	18
1.2.9. Multi-cameral or democratic systems	19
1.2.10. System dynamics	19
1.2.11. Machine learning	20
1.2.12. Deep learning	22

1.2.13. The keys to adopting artificial intelligence in healthcare	23
1.2.14. Organ processing using artificial intelligence.	24
1.2.15. Medical procedures aided by artificial intelligence: drug dosage	25
Chapter 2. The Philosopher’s Point of View: The Challenges of AI for Our Humanity	29
François-Xavier CLÉMENT	
2.1. Introduction	29
2.2. The beginnings of AI	30
2.3. Man: master or slave of AI – examples of behavioral approaches.	33
2.3.1. Teenagers and their phones	33
2.3.2. Consumer behavior and AI.	34
2.3.3. Memory use and AI.	34
2.3.4. Human intelligence versus AI	35
2.3.5. Game master: human or AI?	37
2.4. And what about humanity?	38
2.4.1. New language	38
2.4.2. New thinking	40
2.4.3. A new moral.	41
2.5. AI in education: changing learning styles among students in 2020	43
2.5.1. Generations and technology	43
2.5.2. Student behavior	44
2.6. A few concluding words	45
Part 2. Working with Artificial Intelligence	47
Introduction to Part 2	49
Marianne SARAZIN	
Chapter 3. For Strategic and Responsible “Piloting” of AI-related Open Innovation Projects	51
Aline COURIE-LEMEUR	
3.1. Introduction	51
3.2. Innovation development and the “open innovation” model: challenges and risks	52
3.2.1. Definition of open innovation	52
3.2.2. Dangers of open innovation	54
3.3. Steering “open innovation” projects as part of the development of artificial intelligence techniques.	56
3.3.1. Strategic and responsible management	57
3.3.2. The attributes of strategic, responsible management.	60
3.4. In a nutshell	63
3.5. Conclusion	66

Chapter 4. Management and AI: Myths and Realities	67
Gilles ROUET	
4.1. Introduction	67
4.1.1. Paradigm shift in the business world	67
4.1.2. New management model	68
4.1.3. Mixing genres: intrusion of everyday technologies into the business world	68
4.2. Management in our digital environment	69
4.2.1. The contribution of digital technology to companies	70
4.2.2. Artificial intelligence	72
4.2.3. Analysis concepts for large databases	73
4.3. Humans and machines	76
4.3.1. Optimizing AI-based tools within companies	77
4.3.2. Putting people before AI in companies	78
4.3.3. Evolution of essential skills	79
4.3.4. And then...	80
4.4. Conclusion	81
 Part 3. Managing Healthcare with Artificial Intelligence	83
 Introduction to Part 3	85
Marianne SARAZIN	
 Chapter 5. How to Bring the Medical World Out of the Pre-digital Age?	87
Marc SOLER	
5.1. Introduction	87
5.2. Healthcare professionals' relationship with digital technology	88
5.2.1. Level of training of healthcare professionals	88
5.2.2. Technology and healthcare professionals	90
5.3. Creating a universal medical record: a utopia?	93
5.4. "Artificial intelligence" at the service of healthcare: the French government's position	95
5.5. The approach of technology suppliers?	96
5.6. IBM's Watson system: its history and application to the medical field	98
5.6.1. Concept	98
5.6.2. Oncology applications	99
5.6.3. An admission of failure	99
5.6.4. The clinician's point of view	100
5.6.5. Illustrative examples	102
5.6.6. The importance of source data	104
5.6.7. Conclusion	106

5.7. The role of start-ups	107
5.7.1. A few examples	108
5.7.2. Special case of BenevolentAI	109
5.8. Conclusion	111
Chapter 6. Data Quality: A Major Challenge for AI in Healthcare	113
Marysa GERMAIN	
6.1. Introduction	113
6.2. From patient data to AI	114
6.2.1. The legal framework for processing medical data	114
6.2.2. The technological framework	117
6.2.3. The hospital's database management department: the DIM.	118
6.2.4. Caregivers' views on the digitization of medical information	120
6.3. Data quality and consolidation	120
6.3.1. Medical data.	120
6.3.2. Implementation of a continuous process of quality improvement	122
Part 4. Aging with Artificial Intelligence	133
Introduction to Part 4	135
Marianne SARAZIN	
Chapter 7. Proposed Method for Developing an Aging Score	137
Marianne SARAZIN	
7.1. Introduction	137
7.2. Focus on the determinants of age-related frailty	138
7.3. Choice of marker variables to determine age	139
7.3.1. Rational marker selection based on expertise: an operational approach based on a literature review	139
7.3.2. Selection of markers using variables with values within normality limits	141
7.3.3. Conclusion.	144
7.4. Choice of normal aging control population	145
7.4.1. Initial hypotheses defining the choice of the control population and the construction of the score	145
7.4.2. First approach: rational selection of the control population based on the literature	146
7.4.3. Second approach: selection of the control population by classification using the dynamic clustering method.	146
7.4.4. Results	148
7.4.5. Conclusion.	150
7.5. Mathematical modeling of the aging score	151

7.5.1. Initial concept	151
7.5.2. Calculating biological age from a control population sample	152
7.5.3. Conclusions	159
7.6. Calculating biological age: modeling dependence between marker variables using a Gaussian copula	160
7.6.1. Method	160
7.6.2. Source population	162
7.6.3. Results	162
7.6.4. Conclusions	166
7.7. Calculation of biological age for any population (using a Gaussian copula) . .	166
7.7.1. Method	166
7.7.2. Source population	169
7.7.3. Results	169
7.7.4. Conclusions	175
7.8. Perspectives on this work	176
7.8.1. Advantages and limitations of this work	176
7.8.2. Perspectives	178
Chapter 8. Automatic Detection of Behavioral Changes in a Smart Home	179
Cyriak AZEFAC	
8.1. Introduction	179
8.2. Definitions	181
8.3. Methodology	182
8.3.1. Attribute extraction	184
8.3.2. Unsupervised classification	186
8.3.3. Auto-encoder	187
8.3.4. Clustering	188
8.4. Case study: ARUBA	188
8.5. Conclusion	189
Conclusion	191
Marianne SARAZIN
