Preface	ix
Chapter 1. Chemical Ecology and Ecotoxicology	1
Elisabeth GROSS!	
1.1. Introduction.	1
1.2. Chemical ecology in aquatic and terrestrial habitats	4
1.3. The impact of pollutants on allelochemical interactions	8
1.3.1. Metals as infodisruptors	8
1.3.2. Synthetic organic pollutants as infodisruptors	10
1.4. Natural biocides	14
1.4.1. Natural pesticides	14
1.4.2. Natural antifouling compounds.	15
1.5. Using chemical ecology response factors as alternate end points in ecotoxicology	16
1.5.1. Testing the impact of pollutants on pheromone and kairomone perception.	17
1.5.2. Using stressor-specific “chemical fingerprints” as a link between chemical ecology and ecotoxicology	19
1.6. Conclusion	22
1.7. References	23
Chapter 2. Pollution Tolerance in Aquatic Animals: From Fundamental Biological Mechanisms to Ecological Consequences	33
Claude AMIARD-TRIQUET	
2.1. Introduction.	33
2.1.1. Terminology	34

2.1.2. How may tolerance be assessed?	34
2.1.3. Whys and wherefores of tolerance through flagship studies	38
2.2. Evidence of tolerance to contaminants	41
2.2.1. Intra-specific variability of tolerance	41
2.2.2. Cross-tolerance	42
2.2.3. Inter-specific variability of tolerance	43
2.2.4. Pollution-induced community tolerance	46
2.3. Mechanisms of defense and the acquisition of tolerance to chemical stress	47
2.3.1. Biochemical and physiological processes involved in tolerance.	47
2.3.2. Acclimation or adaptation?	54
2.4. Ecological and ecophysiological aspects of tolerance	56
2.4.1. Cost of tolerance	56
2.4.2. Tolerance and biodiversity	58
2.4.3. Tolerance and the trophic transfer of contaminants	61
2.5. Operational consequences of tolerance	64
2.5.1. Risk assessment.	64
2.5.2. Environmental monitoring and management.	66
2.6. Conclusions.	69
2.6.1. Is tolerance a widespread phenomenon?	69
2.6.2. What are the efficiency limits of tolerance?	69
2.6.3. Consequences of tolerance for organisms and their environment.	70
2.6.4. Operational consequences.	70
2.7. References	71
Chapter 3. Strategies and Consequences of Indigenous and Invasive Freshwater Mussels Living in Cyanobacterial and Anthropogenic Impacted Waters	93
Claudia WIEGAND	
3.1. Life-history traits, strategies and peril of indigenous versus invasive freshwater mussels.	93
3.2. Impact of noxious substances on freshwater mussels	98
3.2.1. Impairment of mussels by cyanobacterial toxins	98
3.2.2. Impact of anthropogenic pollutants on bivalves: pesticides and other anthropogenic organic pollutants	100
3.3. Mechanisms of detoxification and acclimation.	103
3.3.1. Detoxification of cyanobacterial compounds	103
3.3.2. Detoxification of industrial chemicals.	108

3.4. Acclimation	109
3.5. Energetic consequences of exposure to harmful substances	111
3.6. Conclusion	112
3.7. Acknowledgments	113
3.8. References	113

Chapter 4. Anthropogenic Stressor and Parasite Interactions in Aquatic Environments 129

Laëtitia MINGUEZ and Laure GIAMBÉRINI

4.1. Parasites among other confounding factors in environmental monitoring studies	129
4.2. Parasites in ecotoxicological studies	131
4.2.1. Background	131
4.2.2. Interactions between parasites and chemical pollutants	132
4.3. A special case of multistress: coinfections	136
4.3.1. Coinfections with homologous parasites	137
4.3.2. Coinfections with heterologous parasites	138
4.3.3. Coinfections and chemical pollutants	139
4.4. Conclusion	140
4.5. References	141

Chapter 5. Microplastic in Aquatic Environments 149

Messika REVEL, Amélie CHÂTEL and Catherine MOUNEYRAC

5.1. Introduction.	149
5.2. Microplastic in the aquatic environment.	150
5.2.1. Source of MPs.	151
5.2.2. Distribution of MPs	152
5.2.3. Fate and behavior.	154
5.2.4. Microplastic sampling	157
5.2.5. Interactions of MPs with aquatic organisms	158
5.3. Toxicity of microplastic towards aquatic biota	161
5.3.1. Effect at the cellular and molecular levels	162
5.3.2. Effect at the individual level	164
5.3.3. Effects at population, community and ecosystem levels	168
5.4. Conclusion and future research	168
5.5. References	170

Chapter 6. New Challenges: Omics Technologies in Ecotoxicology	181
Odette PRAT and Davide DEGLI-ESPOSTI	
6.1. Introduction.	181
6.2. The omics methodologies	182
6.3. Post-omic concepts	191
6.4. The organisms involved	196
6.5. The substances	196
6.6. The applications	198
6.6.1. Epigenetics.	198
6.6.2. Biomarkers in ecotoxicology	198
6.7. The challenges	199
6.7.1. Big data storage	199
6.7.2. In silico modeling and prediction	199
6.7.3. Variability and environmental genomics	201
6.8. Conclusion	201
6.9. References	202
List of Authors	209
Index	211
