Introduction	xi
Rachid CHELOUAH	
Part 1. Optimization.	1
Chapter 1. Vehicle Routing Problems with Loading Constraints: An Overview of Variants and Solution Methods	3
Ines SBAI and Saoussen KRICHEN	
1.1. Introduction.	3
1.2. The capacitated vehicle routing problem with two-dimensional loading constraints	5
1.2.1. Solution methods	6
1.2.2. Problem description	8
1.2.3. The 2L-CVRP variants.	9
1.2.4. Computational analysis	10
1.3. The capacitated vehicle routing problem with three-dimensional loading constraints	11
1.3.1. Solution methods	11
1.3.2. Problem description	13
1.3.3. 3L-CVRP variants	14
1.3.4. Computational analysis	16
1.4. Perspectives on future research	18
1.5. References	18

Chapter 2. MAS-aware Approach for QoS-based IoT Workflow Scheduling in Fog-Cloud Computing	25
Marwa MOKNI and Sonia YASSA	
2.1. Introduction.	26
2.2. Related works	27
2.3. Problem formulation	29
2.3.1. IoT-workflow modeling	31
2.3.2. Resources modeling	31
2.3.3. QoS-based workflow scheduling modeling.	31
2.4. MAS-GA-based approach for IoT workflow scheduling	33
2.4.1. Architecture model	33
2.4.2. Multi-agent system model.	34
2.4.3. MAS-based workflow scheduling process	35
2.5. GA-based workflow scheduling plan.	38
2.5.1. Solution encoding.	39
2.5.2. Fitness function	41
2.5.3. Mutation operator	41
2.6. Experimental study and analysis of the results	43
2.6.1. Experimental results	45
2.7. Conclusion	51
2.8. References	51
Chapter 3. Solving Feature Selection Problems Built on Population-based Metaheuristic Algorithms	55
Mohamed SASSI	
3.1. Introduction.	56
3.2. Algorithm inspiration	57
3.2.1. Wolf pack hierarchy	57
3.2.2. The four phases of pack hunting	58
3.3. Mathematical modeling.	59
3.3.1. Pack hierarchy.	59
3.3.2. Four phases of hunt modeling.	61
3.3.3. Research phase – exploration	64
3.3.4. Attack phase – exploitation	65
3.3.5. Grey wolf optimization algorithm pseudocode.	66
3.4. Theoretical fundamentals of feature selection	67
3.4.1. Feature selection definition	67
3.4.2. Feature selection methods	68
3.4.3. Filter method.	68

3.4.4. Wrapper method	69
3.4.5. Binary feature selection movement	69
3.4.6. Benefits of feature selection for machine learning classification algorithms	70
3.5. Mathematical modeling of the feature selection optimization problem.	70
3.5.1. Optimization problem definition	71
3.5.2. Binary discrete search space	71
3.5.3. Objective functions for the feature selection	72
3.6. Adaptation of metaheuristics for optimization in a binary search space	76
3.6.1. Module <i>M1</i>	77
3.6.2. Module <i>M2</i>	78
3.7. Adaptation of the grey wolf algorithm to feature selection in a binary search space	81
3.7.1. First algorithm bGWO1	81
3.7.2. Second algorithm bGWO2	83
3.7.3. Algorithm 2: first approach of the binary GWO	84
3.7.4. Algorithm 3: second approach of the binary GWO	85
3.8. Experimental implementation of bGWO1 and bGWO2 and discussion	86
3.9. Conclusion	87
3.10. References.	88

Chapter 4. Solving the Mixed-model Assembly Line Balancing Problem by using a Hybrid Reactive Greedy Randomized Adaptive Search Procedure	91
Belkharroubi LAKHDAR and Khadidja YAHYAOU	
4.1. Introduction.	92
4.2. Related works from the literature	95
4.3. Problem description and mathematical formulation	97
4.3.1. Problem description	97
4.3.2. Mathematical formulation	98
4.4. Basic greedy randomized adaptive search procedure	99
4.5. Reactive greedy randomized adaptive search procedure	100
4.6. Hybrid reactive greedy randomized adaptive search procedure for the mixed model assembly line balancing problem type-2.	101
4.6.1. The proposed construction phase.	102
4.6.2. The local search phase	106
4.7. Experimental examples	107
4.7.1. Results and discussion	111

4.8. Conclusion	115
4.9. References	116
Part 2. Machine Learning	119
Chapter 5. An Interactive Attention Network with Stacked Ensemble Machine Learning Models for Recommendations	121
Ahlem DRIF, SaadEddine SELMANI and Hocine CHERIFI	
5.1. Introduction.	122
5.2. Related work	124
5.2.1. Attention network mechanism in recommender systems.	124
5.2.2. Stacked machine learning for optimization.	125
5.3. Interactive personalized recommender.	126
5.3.1. Notation	128
5.3.2. The interactive attention network recommender.	129
5.3.3. The stacked content-based filtering recommender.	134
5.4. Experimental settings	136
5.4.1. The datasets	136
5.4.2. Evaluation metrics	137
5.4.3. Baselines	139
5.5. Experiments and discussion	140
5.5.1. Hyperparameter analysis.	140
5.5.2. Performance comparison with the baselines	143
5.6. Conclusion	146
5.7. References	146
Chapter 6. A Comparison of Machine Learning and Deep Learning Models with Advanced Word Embeddings: The Case of Internal Audit Reports	151
Gustavo FLEURY SOARES and Induraj PUDHUPATTU RAMAMURTHY	
6.1. Introduction.	152
6.2. Related work	154
6.2.1. Word embedding	156
6.2.2. Deep learning models	157
6.3. Experiments and evaluation	158
6.4. Conclusion and future work	163
6.5. References	165

Chapter 7. Hybrid Approach based on Multi-agent System and Fuzzy Logic for Mobile Robot Autonomous Navigation	169
Khadidja YAHYAOUI	
7.1. Introduction.	170
7.2. Related works	171
7.2.1. Classical approaches	172
7.2.2. Advanced methods	173
7.3. Problem position.	174
7.4. Developed control architecture	176
7.4.1. Agents description	177
7.5. Navigation principle by fuzzy logic	183
7.5.1. Fuzzy logic overview.	183
7.5.2. Description of simulated robot	184
7.5.3. Strategy of navigation	185
7.5.4. Fuzzy controller agent	186
7.6. Simulation and results	194
7.7. Conclusion	196
7.8. References	196
Chapter 8. Intrusion Detection with Neural Networks: A Tutorial	201
Alvise DE' FAVERI TRON	
8.1. Introduction.	201
8.1.1. Intrusion detection systems	201
8.1.2. Artificial neural networks	202
8.1.3. The NSL-KDD dataset.	202
8.2. Dataset analysis	203
8.2.1. Dataset summary	203
8.2.2. Features.	203
8.2.3. Binary feature distribution.	204
8.2.4. Categorical features distribution	207
8.2.5. Numerical data distribution	211
8.2.6. Correlation matrix	212
8.3. Data preparation	213
8.3.1. Data cleaning	213
8.3.2. Categorical columns encoding	213
8.3.3. Normalization	214
8.4. Feature selection	217
8.4.1. Tree-based selection	217
8.4.2. Univariate selection.	218

8.5. Model design	219
8.5.1. Project environment	219
8.5.2. Building the neural network	220
8.5.3. Learning hyperparameters	220
8.5.4. Epochs	220
8.5.5. Batch size	221
8.5.6. Dropout layers	221
8.5.7. Activation functions	222
8.6. Results comparison	222
8.6.1. Evaluation metrics	222
8.6.2. Preliminary models	223
8.6.3. Adding dropout	225
8.6.4. Adding more layers	226
8.6.5. Adding feature selection	227
8.7. Deployment in a network	228
8.7.1. Sensors	228
8.7.2. Model choice	229
8.7.3. Model deployment	229
8.7.4. Model adaptation	231
8.8. Future work	231
8.9. References	231
List of Authors	233
