Preface	xi
Thierry GAUDIN, Marie-Christine MAUREL, Jean-Charles POMEROL	
Introduction	xv
Thierry GAUDIN, Marie-Christine MAUREL, Jean-Charles POMEROL	
Part 1. Randomness in all of its Aspects	1
Chapter 1. Classical, Quantum and Biological Randomness as Relative Unpredictability	3
Cristian S. CALUDE and Giuseppe LONGO	
1.1. Introduction.	3
1.1.1. Brief historical overview	4
1.1.2. Preliminary remarks	5
1.2. Randomness in classical dynamics	6
1.3. Quantum randomness	8
1.4. Randomness in biology.	15
1.5. Random sequences: a theory invariant approach	21
1.6. Classical and quantum randomness revisited	24
1.6.1. Classical versus algorithmic randomness.	24
1.6.2. Quantum versus algorithmic randomness.	26
1.7. Conclusion and opening: toward a proper biological randomness.	27
1.8. Acknowledgments	30
1.9. References	30

Chapter 2. In The Name of Chance	37
Gilles PAGÈS	
2.1. The birth of probabilities and games of chance.	37
2.1.1. Solutions	38
2.1.2. To what end?	40
2.2. A very brief history of probabilities	41
2.3. Chance? What chance?	42
2.4. Prospective possibility	45
2.4.1. LLN + CLT + ENIAC = MC	45
2.4.2. Generating chance through numbers	46
2.4.3. Going back the other way	48
2.4.4. Prospective possibility as master of the world?	50
2.5. Appendix: Congruent generators, can prospective chance be periodic?	53
2.5.1. A little modulo n arithmetic.	53
2.5.2. From erratic arithmetic to algorithmic randomness	56
2.5.3. And, the winner is... <i>Mersenne Twister 623</i>	60
2.6. References	61
Chapter 3. Chance in a Few Languages	63
Clarisse HERRENSCHMIDT	
3.1. Classical Sanskrit	64
3.2. Persian and Arabic.	65
3.3. Ancient Greek	66
3.4. Russian	67
3.5. Latin	67
3.6. French	69
3.7. English	71
3.8. Dice, chance and the symbolic world	72
3.9. References	77
Chapter 4. The Collective Determinism of Quantum Randomness	79
François VANNUCCI	
4.1. True or false chance.	79
4.2. Chance sneaks into uncertainty	81
4.3. The world of the infinitely small	82
4.4. A more figurative example.	84
4.5. Einstein's act of resistance	86
4.6. Schrödinger's cat to neutrino oscillations	87

4.7. Chance versus the anthropic principle	90
4.8. And luck in life?	92
4.9. Chance and freedom	94
Chapter 5. Wave-Particle Chaos to the Stability of Living	97
Stéphane DOUADY	
5.1. Introduction.	97
5.2. The chaos of the wave-particle	97
5.3. The stability of living things.	104
5.4. Conclusion	107
5.5. Acknowledgments.	108
5.6. References	108
Chapter 6. Chance in Cosmology: Random and Turbulent Creation of Multiple Cosmos	109
Michel CASSÉ	
6.1. Is quantum cosmology oxymoronic?	109
6.2. Between two realities – at the entrance and exit – is virtuality.	120
6.3. Who will sing the metamorphoses of this high vacuum?	120
6.4. Loop lament	121
6.5. The quantum vacuum exists, Casimir has met it	122
6.6. The generosity of the quantum vacuum	122
6.7. Landscapes	126
6.8. The good works of Inflation	128
6.9. Sub species aeternitatis	129
6.10. The smiling vacuum	130
Chapter 7. The Chance in Decision: When Neurons Flip a Coin	133
Mathias PESSIGLIONE	
7.1. A very subjective utility	133
7.2. A minimum rationality	134
7.3. There is noise in the choices.	135
7.4. On the volatility of parameters	137
7.5. When the brain wears rose-tinted glasses	138
7.6. The neurons that take a vote	140
7.7. The will to move an index finger	142
7.8. Free will in debate	143

7.9. The virtue of chance.	144
7.10. References.	145
Chapter 8. To Have a Sense of Life: A Poetic Reconnaissance	147
Georges AMAR	
8.1. References	157
Chapter 9. Divine Chance.	159
Bertrand VERGELY	
9.1. Thinking by chance	159
9.2. Chance, need: why choose?	160
9.3. When chance is not chance	162
9.4. When chance comes from elsewhere.	166
Chapter 10. Chance and the Creative Process	169
Ivan MAGRIN-CHAGNOLLEAU	
10.1. Introduction	169
10.2. Chance	170
10.3. Creation	173
10.4. Chance in the artistic creative process	176
10.5. An art of the present moment	179
10.6. Conclusion	181
10.7. References.	182
Part 2. Randomness, Biology and Evolution	185
Chapter 11. Epigenetics, DNA and Chromatin Dynamics: Where is the Chance and Where is the Necessity?	187
David SITBON and Jonathan B. WEITZMAN	
11.1. Introduction	187
11.2. Random combinations.	187
11.3. Random alterations	188
11.4. Beyond the gene	189
11.5. Epigenetic variation	190
11.6. Concluding remarks	192

11.7. Acknowledgments	193
11.8. References.	193
Chapter 12. When Acquired Characteristics Become Heritable: The Lesson of Genomes	197
Bernard DUJON	
12.1. Introduction	197
12.2. Horizontal genetic exchange in prokaryotes.	199
12.3. Two specificities of eukaryotes theoretically oppose horizontal gene transfer	200
12.4. Criteria for genomic analysis.	201
12.5. Abundance of horizontal transfers in unicellular eukaryotes	202
12.6. Remarkable horizontal genetic transfers in pluricellular eukaryotes. .	203
12.7. Main mechanisms of horizontal genetic transfers.	204
12.8. Introgressions and limits to the concept of species	207
12.9. Conclusion	208
12.10. References	208
Chapter 13. The Evolutionary Trajectories of Organisms are Not Stochastic	213
Philippe GRANDCOLAS	
13.1. Evolution and stochasticity: a few metaphors	213
13.2. The Gouldian metaphor of the “replay” of evolution	214
13.3. The replay of evolution: what happened	215
13.4. Evolutionary replay experiments	217
13.5. Phylogenies versus experiments	218
13.6. Stochasticity, evolution and extinction	219
13.7. Conclusion	219
13.8. References.	220
Chapter 14. Evolution in the Face of Chance	221
Amaury LAMBERT	
14.1. Introduction	221
14.2. Waddington and the concept of canalization	224
14.3. A stochastic model of Darwinian evolution	228
14.3.1. Redundancy and neutral networks	228
14.3.2. A toy model	229
14.3.3. Mutation-selection algorithm	231
14.4. Numerical results.	231

14.4.1. Canalization	231
14.4.2. Target selection	234
14.4.3. Neighborhood selection	235
14.5. Discussion.	238
14.6. Acknowledgments	239
Chapter 15. Chance, Contingency and the Origins of Life: Some Historical Issues	241
Antonio LAZCANO	
15.1. Acknowledgments	246
15.2. References.	246
Chapter 16. Chance, Complexity and the Idea of a Universal Ethics	249
Jean-Paul DELAHAYE	
16.1. Cosmic evolution and advances in computation	250
16.2. Two notions of complexity.	251
16.3. Biological computations	252
16.4. Energy and emergy	253
16.5. What we hold onto.	254
16.6. Noah knew this already!	254
16.7. Create, protect and collect	255
16.8. An ethics of organized complexity	255
16.9. Not so easy	256
16.10. References.	258
List of Authors	261
Index	265
