Preface	ix
Roger PRUD'HOMME, Stéphane VINCENT, Christian CHAUVEAU and Mahouton Norbert HOUNKONNOU	
Chapter 1. Turbulent Channel Flow to $Re_\tau = 590$ in Discrete Mechanics	1
Jean-Paul CALTAGIRONE and Stéphane VINCENT	
1.1. Introduction.	1
1.2. Discrete mechanics formulation.	4
1.3. Turbulent flow in channel	6
1.3.1. Analysis of a turbulent flow in a planar channel.	6
1.3.2. Model of the turbulence in discrete mechanics	12
1.3.3. Application to a turbulent flow in a channel with $Re_\tau = 590$	13
1.4. Conclusion	24
1.5. References	24
Chapter 2. Atomization in an Acceleration Field	27
Roger PRUD'HOMME	
2.1. Introduction.	29
2.1.1. Two classic instabilities	29
2.1.2. Atomization	31
2.2. Generation of droplets through vibrations normal to the liquid layer	32
2.3. Rayleigh–Taylor instability at the crest of an axial wave	36
2.3.1. Size distribution of the drops	39

2.4. Recent work	40
2.5. Conclusion	40
2.6. References	41
Chapter 3. Numerical Simulation of Pipes with an Abrupt Contraction Using OpenFOAM	45
Tarik CHAKKOUR	
3.1. Introduction.	45
3.2. Modeling an abrupt contraction in a pipe	46
3.2.1. Euler equations	46
3.2.2. Stability of the solver	48
3.2.3. Introducing the model	49
3.2.4. Boundary and initial conditions	51
3.3. Numerical results	54
3.3.1. Results with the boundary and initial conditions I.	55
3.3.2. Results with the boundary and initial conditions II	67
3.4. Conclusion and future prospects	73
3.5. References	74
Chapter 4. Vaporization of an Equivalent Pastille	77
Roger PRUD'HOMME and Kwassi ANANI	
4.1. Introduction.	78
4.2. Equations for the problem	81
4.3. Linear analysis of the liquid phase	82
4.3.1. The function $G(u, Pe_l)$	82
4.3.2. Solution.	83
4.3.3. The depth to which heat penetrates	84
4.4. Some results	85
4.4.1. Thermal perturbations	85
4.4.2. Response factor	87
4.5. Conclusion	91
4.6. References	92
Chapter 5. Thermal Field of a Continuously-Fed Drop Subjected to HF Perturbations	95
Roger PRUD'HOMME, Kwassi ANANI and Mahouton Norbert HOUNKONNOU	
5.1. Drops in a liquid-propellant rocket engine	96
5.2. A continuously fed droplet.	98

5.3. Equations of the problem	99
5.3.1. Equations for the gaseous phase	99
5.3.2. Equations for the liquid phase	101
5.4. Linearized equations	102
5.5. Linearized equations for small harmonic perturbations	103
5.6. Thermal field in the drop when neglecting internal convection	103
5.7. Conclusion	107
5.8. Appendix 1: Coefficients that come into play in linearized equations.	107
5.9. Appendix 2: Solving the thermal equation	108
5.10. Appendix 3: The case of the equivalent pastille.	109
5.11. Appendix 4: 2D representation for the spherical drop	111
5.12. References.	113
Chapter 6. Study of the Three-Dimensional and Non-Stationary Flow in a Rotor of the Savonius Wind Turbine.	115
Francis RAVELOSON, Delphin TOMBORAVO and Roger VONY	
6.1. Introduction.	115
6.2. Mathematical modeling of the problem	116
6.2.1. Presentation of a physical model	116
6.2.2. Simplifying hypotheses	119
6.3. Numerical resolution	120
6.3.1. Presentation of meshes.	120
6.3.2. Spatial discretization	123
6.3.3. Temporal discretization	123
6.3.4. Stability condition for the scheme	124
6.3.5. Initial conditions	125
6.3.6. Boundary conditions	125
6.4. Validation of the results	126
6.5. Results and discussion	127
6.5.1. Influence of the advance parameter	127
6.5.2. Influence of the angular position of the blades.	134
6.6. Conclusion	144
6.7. Acknowledgments.	144
6.8. References	144

List of Authors	147
Index	149
Summary of Volume 1	151
