Foreword	ix
Jeremy RIFKIN	
Preface	xi
Acknowledgments	xiii
Introduction	xv
Chapter 1. The Major Dualities in How Things are Perceived	1
1.1. Examples to illustrate the ongoing transition	3
1.1.1. Intelligent textiles.	3
1.1.2. From the solar system to the infinitely small.	3
1.1.3. The collective intelligence of working groups	6
1.1.4. Medicine as a playing field for this duality.	8
1.2. Our relationship to power is in question	11
1.3. Our relationship to language is in question	14
1.4. The epistemological mutation of the sciences.	15
Chapter 2. Science and Sense, Places and Links	23
2.1. The salutary crisis of meaning.	23
2.2. The duality of places and links	28
2.2.1. The duality of place and link in our relationship to all things	28
2.2.2. The place/link duality and the noosphere (global network of consciousness)	32
2.2.3. The place/link duality and the biosphere	34
2.3. The metamorphosis of science as a cultural object.	36
2.4. The crisis of joy	37

Chapter 3. Contributory Metamorphosis in the Conception of Systems and the Sciences	41
3.1. Introduction.	41
3.1.1. When Einstein, Wiener and Turing make us dance on a volcano.	44
3.2. The hypothesis of a science claiming to explain everything about visible reality.	51
3.3. From the digital revolution to the quantum revolution	53
3.3.1. Poetic prose of the wave and the corpuscle.	53
3.3.2. The digital revolution	57
3.3.3. The quantum mystery	58
3.3.4. Wave or corpuscle?.	60
3.4. The convergence of physics, cybernetics and digital sciences	62
3.4.1. Could the wave overcome the corpuscle?.	65
3.4.2. The underlying fantasies implied by a new technoscientific era.	68
3.5. Subjectivity, incompleteness, unpredictability and indeterminacy in science.	72
3.5.1. Uncertainty and intersubjectivity in science	72
3.5.2. Incompleteness in science.	74
3.5.3. Unpredictability in science	76
3.6. The case of economic sciences	82
3.6.1. Unforeseeability in economics/finance	82
3.7. Critical notes on the hypothesis of a unified science of visible reality	85
3.7.1. Phenomenological metaphor	85
3.7.2. Humans harness electromagnetic waves	86
3.7.3. Is a “unified scientific theory of the knowable” still on its way?	88
3.7.4. Is the “unified scientific theory of the knowable” developing as a belief?	89
3.8. Understanding what it means to understand.	94
3.9. Science pushed to the limits, the limits of science	106
3.10. Conclusion	110
Chapter 4. The Contributory Metamorphosis of Technical Progress	113
4.1. Introduction.	113
4.2. Confession: the suicidal race to technical intensity	116
4.3. A short history, from geosphere to technical civilization	124
4.3.1. The revolution of the living world	126
4.3.2. The revolution of consciousness	127

4.4. The five stimulants of the “technological bluff”	131
4.4.1. “Pseudo-humanist reductionism” is spreading and becoming dominant	131
4.4.2. Distancing from collateral damage to nature	134
4.4.3. The separation of use, design and the production of goods	135
4.4.4. Technology becomes an object of enjoyment in itself, and develops its own narrative, a true technomythology.	136
4.4.5. Value confused with price, in ideas of the market.	137
4.5. The case of robotics and artificial intelligence	142
4.5.1. Metaphor of pattern recognition to understand different artificial intelligence machines	142
4.5.2. Critique of the contemporary narrative of modernity relating to robotics derived from artificial intelligence.	144
Chapter 5. The Salutory Crisis of Joy	155
5.1. The demolition of places	155
5.2. The living world, an example to follow	165
5.3. A saving antidote to the general crisis of meaning.	167
5.4. The path of complexity – ethics of organized complexity	169
5.5. Third places, co-elaborative spaces that integrate meaning.	171
5.6. Is an endo-contributive economy possible? (Human capital and full human development)	173
5.6.1. Rivalry or exclusion? Club property and common property.	173
5.6.2. From collectivity to community	175
5.6.3. Fair or effective communities?	176
5.6.4. The emergence of a contributory economy.	177
5.6.5. Human capital at the heart of the contributory economy.	179
5.7. Is endo-contributive energy possible?	182
5.7.1. Towards the decentralization of electricity networks	182
5.7.2. Smart grids?	183
5.7.3. Consum-actors for an endo-contributory management of networks?	184
5.7.4. Blockchain: information and communication systems for peer-to-peer exchanges. A step towards an endo-contributive approach to energy?	185
5.8. Is endo-contributive agriculture possible?	187
5.9. Is endo-contributory technoscience possible?	189

Conclusion: The Limits of the Thesis	191
Postface	193
