Preface	xv
Abhishek KUMAR, Ananth Kumar T., Ashutosh Kumar DUBEY, Arun Lal SRIVASTAV and J. Reyes JUÁREZ-RAMÍREZ	
Chapter 1. AI-Driven Advanced Smart Grid with Optimized Hybrid Renewable Energy Systems	1
Mary A.G. EZHIL, S. JAISIVA, M. SUTHANTHIRA, R. ANUJA, M. Dhiviya NYCIL and A.S. MONIKANDAN	
1.1. Introduction	1
1.2. Overview of renewable energy systems	2
1.2.1. Analysis of solar energy systems	3
1.2.2. Analysis of wind power systems.	5
1.2.3. Analysis of geothermal energy.	7
1.3. Evolution phases of AI in hybrid renewable energy systems	8
1.4. Integration of AI in hybrid energy systems	10
1.4.1. Classification of AI in renewable energy systems	12
1.5. Analyzing the integration of AI models in renewable energy systems	16
1.5.1. Analyzing the optimization algorithms in the integration of AI into renewable energy systems	17
1.6. AI-optimized hybrid system design	21
1.6.1. Data acquisition and preprocessing	21
1.6.2. Model selection and training	23
1.6.3. Optimization parameter tuning	23
1.6.4. Simulation and validation	24
1.6.5. Real-time implementation considerations.	25
1.7. Performance metrics and evaluation	25
1.7.1. Energy efficiency and loss reduction	26

1.7.2. Cost–benefit analysis	27
1.7.3. Reliability and resilience indicators	27
1.8. Challenges and future directions	28
1.8.1. Technical and computational challenges	28
1.8.2. Data availability and quality issues	28
1.8.3. Scalability of AI models in large systems.	29
1.8.4. Integration with emerging technologies (IoT, blockchain)	29
1.8.5. Potential research gaps	29
1.9. Conclusion	29
1.9.1. Summary of key findings.	30
1.9.2. Final remarks on AI’s role in HRES	30
1.9.3. Vision for the future	30
1.10. References	31
Chapter 2. Implementation of an AI-Driven Hybrid Renewable Energy Management System Using Deep Fuzzy-Based Particle Swarm Optimization (DFB-PSO)	33
E. Afreen BANU, Rajasekaran PALANIAPPAN, J.D. Dorathi JAYASEELI and P. ROBERT	
2.1. Introduction	33
2.2. Review of optimization algorithms in hybrid renewable energy systems	37
2.3. Deep learning, fuzzy logic and swarm intelligence hybrid AI solutions	39
2.4. Architecture and methodology	42
2.5. Implementation process	45
2.6. Results and discussion.	48
2.7. Conclusion	53
2.8. References	54
Chapter 3. Generative AI for Hybrid Renewable Energy Systems (Solar–Wind–Hydro Integration)	57
Mamta	
3.1. Introduction	57
3.1.1. Background and motivation	58
3.1.2. Role of AI in renewable energy	58
3.1.3. Objectives and contribution	60
3.2. Literature review.	60
3.3. Fundamentals of generative AI in hybrid systems	62
3.3.1. Overview of generative models	62
3.3.2. Generative AI advantages in renewable energy	64

3.4. Proposed framework and methodology	65
3.4.1. Data sources and preprocessing	65
3.4.2. Generative AI-based model framework.	65
3.4.3. Optimization and evaluation metrics	67
3.5. Case study/experimental analysis	68
3.5.1. Dataset and setup description	68
3.5.2. Application of generative AI in hybrid energy prediction.	68
3.5.3. Comparative results with traditional methods	69
3.6. Results and discussion.	71
3.6.1. Forecasting and optimization outcomes.	71
3.6.2. Energy efficiency and cost analysis	71
3.6.3. Practical implications.	72
3.7. Challenges and limitations	74
3.7.1. Data and infrastructure issues	74
3.7.2. Integration barriers in real systems	74
3.7.3. Ethical and security concerns	75
3.8. Future directions	75
3.8.1. IoT and smart grid integration	75
3.8.2. Digital twins and next-gen models	76
3.8.3. Role in global energy transition	76
3.9. Conclusion	76
3.10. References	77
Chapter 4. AI for Enhancing Sustainability in Wind Energy	81
Komal MISHRA and Suman CHAHAR	
4.1. Introduction	81
4.1.1. Sustainability problems related to wind energy	82
4.1.2. Role of AI in sustainable wind power.	82
4.2. Difficulties related to the sustainability of wind energy	83
4.2.2. How resources change over time and connecting to the grid	83
4.2.3. Loss of power caused by inaccurate positioning and other issues	83
4.2.4. Taking care of the machine, making it solid and its greenhouse gas emissions after being used	84
4.2.5. Issues that could have negative impacts on the environment and society.	84
4.2.6. Sustainable use of the supply chain and materials	84
4.3. Brief explanation of AI techniques.	85
4.3.1. How the supervised learning method is used for prediction.	85
4.3.2. Temporal and spatial issues in DL.	85
4.3.3. Using reinforcement learning for real-time control	86

4.3.4. Unsupervised learning: making use of clustering	86
4.3.5. Digital twins: closely connected to physics-informed AI	86
4.4. Using AI to find and select wind sites	87
4.4.1. Assessing wind using AI	87
4.4.2. Analysis of the environment and terrain with AI.	87
4.4.3. Benefits and challenges.	88
4.5. Using AI in predictive maintenance	88
4.5.1. Gathering data and preprocessing	89
4.5.2. Detecting anomalies and fault classification	89
4.5.3. Remaining useful life (RUL) estimation	89
4.5.4. Deployment considerations and benefits	89
4.6. Intelligent control systems for wind turbines	90
4.6.1. Reinforcement learning is used for control	90
4.6.2. Model predictive control (MPC) with data-driven models	90
4.6.3. Adaptive and fuzzy logic controllers	90
4.6.4. Distributed and multi-agent control	91
4.7. Forecasting wind power through the use of machine learning.	91
4.7.1. Forecasting using traditional ML with certain outputs.	91
4.7.2. Deep learning models.	91
4.7.3. Probabilistic and quantile forecasting	92
4.7.4. Techniques that merge physical and learning approaches.	92
4.7.5. Checking performance and factoring in benchmarks	92
4.8. AI for linking different energy sources and ensuring management	93
4.8.1. Demand response and load forecasting	93
4.8.2. Handling energy storage	93
4.8.3. Virtual power plants and the technology behind microgrid control	93
4.8.4. Ensuring the reliability of electricity grids	94
4.9. Challenges, limitations and ethical considerations	94
4.9.1. Data quality, availability and bias	94
4.9.2. Model robustness, interpretability and security	95
4.9.3. Ethical, privacy and regulatory issues.	95
4.10. Future outlook and research directions	95
4.10.1. Federated and privacy-protecting learning	95
4.10.2. Explainable and trustworthy AI	96
4.10.3. Digital twins and physics-informed AI	96
4.10.4. Multi-agent and cooperative control	97
4.10.5. Integration with energy storage and multi-energy systems	97
4.10.6. Sustainable AI and green computing	97
4.10.7. AI for materials and recycling optimization.	98
4.11. Conclusion	98
4.12. References	99

Chapter 5. Intelligent Energy with AI-Driven Innovations in Wind Power Systems	101
R. RAJASREE, D. LAKSHMI and Malathy BATUMALAY	
5.1. Introduction	101
5.1.1. AI in renewable energy.	102
5.1.2. Wind resource assessment and forecasting using AI.	102
5.1.3. AI-based control and optimization of wind turbines.	103
5.1.4. Predictive maintenance and fault detection in wind systems	104
5.1.5. Smart grid integration and load management.	104
5.2. Literature review.	105
5.3. Proposed methodology	112
5.3.1. Wind data	113
5.3.2. Meteorological data.	114
5.3.3. Turbine operational data	114
5.3.4. Grid demand.	115
5.3.5. AI-driven innovations	115
5.3.6. Accurate forecasts	116
5.3.7. Enhanced turbine performance	116
5.3.8. Reliable grid management	117
5.4. Results and discussion.	117
5.5. Conclusion and future work.	122
5.6. References	123
 Chapter 6. Economic and Market Impacts of AI in Wind Power	 127
Mantena Siva Pavan Kumar RAJU and Mantena SIREESHA	
6.1. Introduction	127
6.2. Operational efficiencies and cost savings through AI	130
6.2.1. Predictive maintenance and reduced downtime	130
6.2.2. Turbine performance enhancement through AI	131
6.2.3. Effect on operating and capital spending	132
6.3. Influence of AI on market dynamics	132
6.3.1. AI in energy forecasting and energy trading	133
6.3.2. Dynamic pricing models and market participation.	133
6.3.3. AI-assisted wind farms: case studies	134
6.4. Economic analysis of AI integration in wind projects	134
6.4.1. Cost–benefit analysis framework	135
6.4.2. Return on investment (ROI) and payback period improvements	135
6.4.3. Effect on levelized cost of energy (LCOE).	136
6.5. Role of AI in wind power financing and investment trends	137
6.5.1. How AI supports investor confidence.	137

6.5.2. Impact on policy frameworks and financial risk management	138
6.5.3. Emerging AI-driven business models	139
6.6. Limitations and challenges	139
6.6.1. High upfront integration expenses.	140
6.6.2. Data privacy and cybersecurity issues	140
6.6.3. Skills gap in AI implementation	140
6.7. Future opportunities	141
6.7.1. AI and blockchain synergy in wind markets	141
6.7.2. Role in carbon credit markets and smart grids	142
6.8. Conclusion	143
6.9. References	144

Chapter 7. AI for Policy and Regulatory Frameworks in Wind Power

Suman CHAHAR and Komal MISHRA	151
7.1. Introduction	151
7.2. Challenges in current policy and regulatory frameworks.	152
7.2.1. Completely static and rigid regulations	152
7.2.2. Poor integration with grid management systems.	153
7.2.3. Permission latency and environmental approvals	154
7.2.4. Lack of adequate stakeholder engagement and transparency	154
7.2.5. Mismatched incentive structures.	155
7.2.6. Fragmentation of international and subnational policies	155
7.3. Overview of AI technologies relevant to policy and regulation	156
7.3.1. Machine learning (ML).	156
7.3.2. Natural language processing (NLP)	156
7.3.3. Predictive analytics	157
7.3.4. Decision support systems: DSS	158
7.3.5. Expert systems and rule-based AI	158
7.3.6. Knowledge graphs and semantic AI.	159
7.3.7. AI in remote sensing and computer vision	160
7.3.8. Multi-agent systems (MAS)	160
7.4. Applications of AI in wind power policy and regulation.	161
7.4.1. Policy simulation and forecasting	161
7.4.2. Automation of permitting and compliance monitoring	161
7.4.3. Adaptive movement of regulatory states	162
7.4.4. Engaging stakeholders and analyzing public sentiment	162
7.4.5. Grid integration and regulatory planning forecasting	163
7.4.6. EIA optimization	163
7.4.7. AI-driven incentive design and subsidy allocation.	164
7.4.8. Harmonization of cross-border regulations	164

7.4.9. Decentralized energy market smart contract regulation	165
7.4.10. Optimization models for land use and spatial planning	165
7.5. Case studies and global best practices	166
7.5.1. United States: AI for wind forecasting and grid integration.	166
7.5.2. Denmark: AI for enhanced wind turbine and energy storage performance	166
7.5.3. European Union: AI for harmonizing regulation and cross-border collaboration.	167
7.5.4. China: application of AI to wind energy site selection and environmental impact assessments	167
7.5.5. India: AI applications in wind power forecasting and regulatory compliance	168
7.6. Future direction	168
7.6.1. Integration of AI with smart grids for decentralized energy systems	168
7.6.2. Powerful AI for modeling policy predictive modeling	169
7.6.3. AI for fostering cross-sector collaboration	169
7.6.4. Transparent and inclusive decision-making by AI.	170
7.6.5. The rise of quantum computing in wind power optimization	170
7.6.6. Blockchain and AI for new energy trading and grid decentralization future directions	171
7.7. Conclusion	171
7.8. References	172

Chapter 8. Implementation of an AI-Driven Wind Energy Sustainability Framework Using Reinforcement Learning-Optimized Deep Neuro-Fuzzy Controller (RL-DNFC) 175

Rajasekaran PALANIAPPAN, E. Afreen BANU, P. ROBERT and

J.D. Dorathi JAYASEELI

8.1. Introduction	175
8.2. Literature review.	177
8.3. Wind energy control using fuzzy logic	177
8.4. Neural and deep learning models to predict wind power.	178
8.5. Adaptive wind energy control with reinforcement learning	178
8.6. Neuro-fuzzy and hybrid reinforcement approaches.	179
8.7. System architecture of the AI-driven wind energy sustainability framework.	180
8.8. Methodology and algorithmic design	183
8.9. Implementation setup and simulation environment.	187
8.10. Experimental results and performance analysis	190
8.11. Discussion.	196
8.12. Conclusion	200
8.13. References	201

Chapter 9. AI in Offshore Wind Energy Systems	203
V. VANITHA and M. YASHICA	
9.1. Overview of offshore wind energy	204
9.2. AI in offshore wind farms.	204
9.2.1. AI in design and site selection for offshore wind farms	206
9.2.2. AI in predictive maintenance of offshore wind farms	207
9.2.3. AI in energy forecasting and grid optimization for offshore wind farms	208
9.2.4. AI in the operation and maintenance of offshore wind farms	209
9.3. Case studies	211
9.3.1. Siemens Gamesa – AI-driven digital twins	211
9.3.2. Orsted – AI-based predictive maintenance and digital operations.	211
9.3.3. GE Renewable Energy – digital wind farm.	212
9.3.4. ORE Catapult – AI in offshore wind deployment and maintenance	212
9.4. Challenges and future trends	213
9.4.1. Data connectivity and integration	213
9.4.2. Energy supply for robots and environmental adaptability.	213
9.4.3. Regulatory and safety frameworks	213
9.4.4. Cybersecurity	213
9.4.5. Computational limitations	213
9.4.6. Model adaptability	213
9.4.7. Data quality and accuracy	214
9.4.8. Robotics	214
9.4.9. Edge AI	214
9.4.10. Integration of AI with the latest technologies.	214
9.4.11. Autonomous installation vessels and AI-on-chip.	214
9.5. Conclusion	214
9.6. References	215
Chapter 10. Emerging AI Innovations in Wind Power	217
R. GAYATHRI and V.VANITHA	
10.1. Introduction.	218
10.2. Applications of AI in the wind industry	220
10.2.1. Wind forecasting	220
10.2.2. Wind turbine performance optimization.	222
10.2.3. Wind farm optimization.	224
10.2.4. Predictive maintenance and fault detection	225
10.2.5. Automation and remote monitoring	228
10.2.6. Autonomous drones for inspection and monitoring	230
10.2.7. Bird avoidance systems in wind farms.	230

10.2.8. Design of turbine blades	231
10.2.9. Grid integration and energy storage optimization	231
10.3. Case studies	231
10.3.1. AI-driven predictive maintenance	231
10.3.2. AI-based wind farm layout optimization by DeepMind	232
10.3.3. Vestas AI-powered smart turbine fleet management	233
10.3.4. GE Renewable Energy and AI for optimizing turbine performance	233
10.3.5. AI-driven bird avoidance systems – the IdentiFlight system	235
10.4. Challenges of AI in the wind industry	235
10.4.1. Data quality and availability	235
10.4.2. Integration with existing systems	236
10.4.3. Regulatory and ethical considerations	236
10.4.4. Understanding and leveraging AI	236
10.4.5. Collaboration and data sharing	237
10.4.6. Well-labeled data	237
10.4.7. Algorithmic bias and hallucinations	237
10.4.8. Cyberattacks	237
10.5. Conclusion	238
10.6. References	238
Chapter 11. Generative AI for Energy Consumption Behavior Analysis	241
S. VANSHIKA and Neetu RANI	
11.1. Introduction	242
11.2. Fundamentals of generative AI for energy consumption behavior	243
11.2.1. Generative adversarial networks (GANs)	243
11.2.2. Variational autoencoders (VAEs)	244
11.2.3. Flow-based models	245
11.2.4. Transformer-based models	245
11.3. Data in energy behavior analysis	247
11.3.1. Characteristics of smart meter data	247
11.3.2. Ancillary data sources	248
11.3.3. Data challenges	249
11.4. Applications of generative AI in energy consumption analysis	249
11.4.1. Synthetic data generation for privacy and augmentation	249
11.4.2. Probabilistic load forecasting and scenario generation	250
11.4.3. Behavioral clustering and anomaly detection	251
11.4.4. Personalized energy recommendations and demand response	251

11.5. Case studies	253
11.5.1. Case study 1: synthetic household energy profiles using GANs	253
11.5.2. Case study 2: demand response optimization with VAEs	254
11.5.3. Case study 3: anomaly detection with flow-based models	254
11.5.4. Case study 4: behavior simulation with transformer models	255
11.6. Challenges and ethical considerations	256
11.6.1. Key challenges	256
11.6.2. Ethical considerations	257
11.7. Conclusion	257
11.8. References	258
Chapter 12. Wind Power Forecasting for Grid Stability Enhancement with Effective Integration of AI Techniques	261
J. Johney BAI, A. Lelin FRED, S. Jaisiva, V. VELMURUGAN and T. Dharma RAJ	
12.1. Introduction	261
12.2. Overview of wind power prediction	264
12.2.1. Wind power	265
12.2.2. Wind power generation components	265
12.2.3. Wind power generation dynamics	268
12.2.4. Global wind power generation trends and perspectives	271
12.2.5. Importance and challenges of forecasting wind power	272
12.3. Workflow of wind power prediction	272
12.3.1. Methods for forecasting wind power	276
12.3.2. Predicting wind power and spatial transferability at various locations	283
12.3.3. Features of an effective forecasting model	284
12.4. Grid stability	284
12.4.1. Types of grid stability	285
12.4.2. Characteristics of grid stability	286
12.5. Conclusion	287
12.6. References	288
List of Authors	291
Index	295
