<b>Introduction</b> . . . . .	ix
<b>Chapter 1. From the Territory to Health Territories</b> . . . . .	1
1.1. Territory: originally a geographic and administrative concept . . . . .	1
1.2. Health territories . . . . .	3
1.3. Health of territories . . . . .	7
1.4. Understanding the links between environment and health within a territory . . . . .	9
1.5. From the environment to health: a question of exposure . . . . .	24
1.6. Exposure to fine particles and respiratory problems: from hospitalization to mortality . . . . .	27
1.7. Air pollution in the city, impact on health of vulnerable populations and overall perception . . . . .	30
<b>Chapter 2. The Contribution of Statistics to the Understanding of Health Issues in a Territory</b> . . . . .	35
2.1. Statistics: a historical contribution to the understanding of phenomena . . . . .	35
2.2. On the relevance of the indicators . . . . .	49
2.3. Data sources: Big Data and its use in health . . . . .	52
2.4. Problem of data alignment: the issue of usable formats . . . . .	54
2.5. Ethical issues surrounding data . . . . .	56

---

<b>Chapter 3. Contribution of Cartography to the Understanding of Health Issues</b> . . . . .	59
3.1. Reflection on cartography and its contributions . . . . .	59
3.2. A few helpful elements in cartography. . . . .	61
3.2.1. Quadrat sampling: measurement of spatial dissimilarity . . . . .	61
3.2.2. Multicriterion method: example applied to the selection of sentinel pharmacies . . . . .	65
3.2.3. Variograms and spatial interpolation . . . . .	75
3.2.4. Maps and cartograms. . . . .	77
3.3. The MAUP and the problem of data aggregation . . . . .	79
3.4. What are the constraints in the area of health? . . . . .	82
3.5. Example of the development of an environment–health platform . . . . .	84
3.6. Optimization of emergency services during times of crisis: the application GÉOSAMU . . . . .	88
<b>Chapter 4. Contribution of Digital Technology to the Understanding of Health Issues in a Territory</b> . . . . .	95
4.1. Consumer health informatics: what are the benefits for the patient, and what are the drawbacks? . . . . .	97
4.2. E-health: a new development in health in the world . . . . .	98
4.3. Health itineraries and differentiated vulnerability . . . . .	100
4.3.1. Vulnerability and health risk system in the context of pedestrian journeys. . . . .	103
4.3.2. From assessment of the level of pollutant exposure to detection of an environmental optimal itinerary. . . . .	105
4.3.3. Applications to a theoretical cross-linked space . . . . .	108
4.4. From model sets to serious games models. . . . .	116
4.5. Connected medical consultations: how will medicine be practiced in tomorrow’s world? . . . . .	120
<b>Chapter 5. The Territory as an Issue of Integration into a Process of Optimization</b> . . . . .	121
5.1. Territories as a catalyst for the development of smart cities . . . . .	121
5.1.1. Smart city: a history of the concept . . . . .	121
5.1.2. Territorial optimization: from a territory endured to a territory chosen . . . . .	124
5.2. A new theory of the optimum: constructal theory – a step towards a possible transfer into other sciences . . . . .	131
5.3. Issues in terms of health . . . . .	137

<b>Conclusion</b> .....	141
<b>Bibliography</b> .....	143
<b>Index</b> .....	153
