Introduction	xi
Chapter 1. Definition and Classification of Stem Cells	1
1.1. Two characteristics specific to stem cells	2
1.1.1. An infinite multiplication capacity: self-renewal	3
1.1.2. A specialization ability: differentiation	4
1.2. Adult stem cells or specific stem cells of a tissue	6
1.2.1. Bone-marrow stem cells	6
1.2.2. Umbilical cord blood stem cells	10
1.2.3. Intestinal stem cells.	11
1.2.4. Neural stem cells	13
1.2.5. Adipose tissue-derived stem cells	14
1.2.6. Skeletal and cardiac muscle stem cells	16
1.2.7. Skin stem cells	19
1.3. Embryonic stem cells	22
1.3.1. Pluripotent embryonic stem cells.	23
1.3.2. The ground state of pluripotency.	25
1.3.3. A new distinction between naïve and primed pluripotency in mice	27
1.3.4. What of the pluripotency of human embryonic stem cells?	33

1.4. Induced pluripotent stem cells	35
1.4.1. The discovery of induced pluripotent stem cells	35
1.4.2. The key factors of pluripotency	38
1.4.3. The reprogramming mechanism	41
1.4.4. Proof of concept of a possible therapeutic utility to induced pluripotent cells	43
Chapter 2. Stem Cells as a Necessary Experimental Platform in Medical Research	47
2.1. A tool for modeling human pathologies	48
2.1.1. Identification of the phenotype of the pathology thanks to stem cells	49
2.1.2. A multiplicity of possible approaches to pathologies	51
2.1.3. A modeling also applicable to epigenetic disorders	56
2.2. A pharmaceutical screening tool	58
2.2.1. A strategy for approaching high-throughput screening	58
2.2.2. The search for medications to treat neurological diseases	60
2.2.3. Restoring the expression of the IKBKAP protein in familial dysautonomia	61
2.2.4. An example of translational research: ALS	63
2.3. A predictive toxicology tool in the pharmaceutical industry	64
2.3.1. Stem cells revealing cardiotoxicity	66
2.3.2. Stem cells revealing hepatotoxicity	70
Chapter 3. Stem Cells at the Core of Cell Therapy	73
3.1. Blood stem cells, pioneers of cell therapy	74
3.1.1. Bone-marrow blood stem cells	76
3.1.2. Blood stem cells from fetoplacental blood	79
3.2. Skin stem cells	82
3.2.1. Structure of the skin	82
3.2.2. Reconstruction of a simplified human skin	83
3.2.3. Constantly evolving skin reconstruction	85
3.3. Stem cells at the core of clinical research	89
3.3.1. State of progress of global-scale clinical trials (January 2017)	89
3.3.2. The first cell therapy medicinal product to be licensed in Europe, Holoclar	92
3.3.3. Ongoing clinical trials using human embryonic stem cells	94
3.3.4. Induced pluripotent stem cell-based clinical trials: first clinical trial on AMD in Japan	99

Chapter 4. Stem Cells for Regenerative Medicine in Humans	101
4.1. Biomaterials in tissue engineering	102
4.1.1. The adhesion of cells to biomaterials	102
4.1.2. The extracellular matrix, a complex architecture to imitate	103
4.2. Nanofibers associated with stem cells organized in 3D	105
4.2.1. Nanotechnology and integrin adhesion	106
4.2.2. Nanotopography orients the fate of stem cells	107
4.3. 3D printing from stem cells	112
4.3.1. 3D bioprinting techniques	113
4.3.2. 3D printing of multipotent stem cells	115
4.3.3. 3D printing of pluripotent stem cells	118
4.4. Today's regenerative medicine	119
4.4.1. The cardiac patch	119
4.4.2. Treatments authorized by the FDA	120
4.4.3. Authorized treatments throughout the world	122
Chapter 5. Bioethics: Regulatory Framework for Human Stem Cells	127
5.1. The legal position relating to stem cell research	130
5.1.1. Embryonic stem cell research	130
5.1.2. Adult stem cell research	137
5.1.3. Induced pluripotent stem cell research	138
5.2. The patentability of stem cell research	138
5.2.1. Patentability and embryonic stem cells	139
5.2.2. Patentability and adult stem cells	141
5.2.3. Patentability and induced pluripotent stem cells	141
5.3. Cell- and tissue-based therapy products	141
5.3.1. Classification of cell- and tissue-based products	143
5.3.2. Advanced-therapy medicinal products	145
5.3.3. Advanced-therapy medicinal products prepared on a non-routine basis	149
5.3.4. Cell- or tissue-based therapy preparations	151
