Introduction	ix
Philippe Le MOIGNE	
Part 1. Basic Principles: Strengths and Limitations of Psychiatric Assessment Tools	1
Introduction to Part 1	3
Chapter 1. The Spread of Psychiatric Nosography into Science: Origins and Issues of the Research on Depression (1950–1985)	7
Philippe Le MOIGNE	
1.1. First period: from the reactional model to the earliest clinical hypotheses (1950–1977)	11
1.1.1. From depressive inertia to the differentiation of mental disorders	12
1.1.2. The personalization of the cure: subjectivity as an instrument of knowledge?	16
1.2. Second period: growth and limits of brain neurochemistry (1978–1984)	19
1.2.1. The endogenous hypothesis	20
1.2.2. The downfall of the medical diagnosis of depression	22
1.2.3. Psychiatric semiology or the obligatory reference	24
1.3. Third period: toward principles of standardized clinical evaluation (from 1985 onwards)	26
1.3.1. Conceptualization according to quantitative psychopathology	26
1.3.2. Measuring change: an instrumental arbitration	33
1.3.3. The external validity of evaluation scales: interdisciplinary connections	38

1.3.4. Interrater reliability: the product of internal unity	40
1.4. Conclusion	44
1.5. References	47
Chapter 2. The Hamilton Scale as an Analyzer for the Epistemological Difficulties in Research on Depression	55
Xavier BRIFFAULT	
2.1. A measurement without an object to be measured	57
2.1.1. A rapid diffusion without theoretical constraints	59
2.1.2. A “zeitgeist-compatible” scale	60
2.1.3. Uses that soon deviated from the initial purpose of the scale	62
2.1.4. To try it is to adopt its depression	64
2.2. Multiple, but ineffectual, criticisms.	65
2.2.1. The problematic institution of depression	67
2.2.2. New types of depression.	68
2.3. Moving toward a paradigm crisis	71
2.3.1. The EBM regulation of the “depression device”	73
2.3.2. Technological opening: toward a new idiom for mental health	77
2.4. Conclusion	78
2.5. References	80
Part 2. Developments: Chronicles of Successful Tests	89
Introduction to Part 2	91
Chapter 3. A Golden Standard to Evaluate OCD: On the Use of the Y-BOCS	95
Margot MORGIÈVE	
3.1. The historical and ontological development of the scale and the disorder.	96
3.1.1. Prerequisite for the scale: the existence of a disorder to be evaluated	96
3.1.2. The historical creation of the scale.	100
3.2. An instrument of explicative and structuring objectification	103
3.2.1. An instrument that breaks up experience	103
3.2.2. Consultation: the vector of Y-BOCSized expressions	105
3.2.3. An “OCD-ed” habitus	106
3.2.4. Concretized uses of the gold standard.	108
3.2.5. A scale that structures the world	111
3.3. Limits and evolution of the scale	114
3.3.1. Reduction of experience.	114
3.3.2. Toward a contextualized evaluation of the thinking subject?	116

3.4. Does the Y-BOCS have a (promising) future?	119
3.5. References	121
Chapter 4. Objectifying Dementia: the Use of the Mini-Mental State Exam in Medical Research and Practice	127
Baptiste BROSSARD	
4.1. From success to controversy	130
4.1.1. The creation of the MMSE	130
4.1.2. Local promotion	132
4.1.3. An unexpected career	133
4.1.4. The end of the MMSE?	135
4.2. A convertible capital	137
4.2.1. Medical research practice	137
4.2.2. The practice of geriatric consultations.	139
4.2.3. Practicing evidence-based medicine	142
4.2.4. Copyright	147
4.3. Conclusion	148
4.4. References	148
Part 3. Uses: the Tests in Context	155
Introduction to Part 3	157
Chapter 5. The MMSE in Practice: the Medical Relationship Reflected through the Administration of a Neuropsychological Test.	161
Aude BÉLIARD	
5.1. The interpretation of the tests during the initial diagnosis: listening to and evaluating the companions	165
5.2. Testing cognitive function, working on relations with the families: the multiple uses of the test over the long-term in relations between carer, patient and families	170
5.3. Conclusion	181
5.4. References	182
Chapter 6. From Care to Risk Prevention: the Success of Screening Tests for Drugs at the Workplace (United States/France)	183
Renaud CRESPIIN	
6.1. From the clinic to the Vietnam war: innovation and initial uses	188
6.1.1. Between care, social order and financing: the earliest screening	189

6.1.2. An evaluation that was conducive to the diffusion of a standard for treatment	191
6.1.3. Military appropriation: screening as a massive preventive measure.	192
6.1.4. Widening the field of screening: American civilian workplaces	197
6.2. Regularizing and standardizing: the European domestication of drug screening	205
6.2.1. Acclimatizing tests to labor norms: a divided French regulatory environment	206
6.2.2. Bridging the gaps: techniques, norms and networks	210
6.2.3. Multi-positionality and elective affinity: the interest shown by public powers	214
6.3. Conclusion	219
6.4. References	223
Conclusion	235
