<b>Foreword by Thierry Magnin</b> . . . . .	xi
<b>Foreword by Audrey Linkenheld</b> . . . . .	xvii
<b>Introduction</b> . . . . .	xxv
<b>Chapter 1. From Transition Challenges to Smart Grids and Smart Buildings</b> . . . . .	1
1.1. Introduction . . . . .	1
1.2. Climatic challenges . . . . .	3
1.3. Four inspiring social and climate scenarios . . . . .	5
1.4. Sufficiency or prosperity . . . . .	13
1.4.1. Personal, shared and organizational sufficiency . . . . .	13
1.4.2. From smart sharing to wise sharing . . . . .	14
1.4.3. From sufficiency to prosperity . . . . .	16
1.4.4. Spirituality and ecological transition . . . . .	19
1.5. Ethical and political issues . . . . .	22
1.5.1. Ethical issues in the ecological transition . . . . .	22
1.5.2. Questions of governance or the need to reinvent democracies . . . . .	23
1.5.3. Eco-anxiety . . . . .	29
1.6. Bifurcating research . . . . .	31
1.7. Smarter energy networks . . . . .	33
1.7.1. From 100% renewable energy to a combination of solutions . . . . .	33
1.7.2. Towards the decentralization of electricity grids . . . . .	36
1.7.3. Smart grids, self-generation and self-consumption . . . . .	38
1.7.4. An increasingly miraculous electricity fairy – yes but? . . . . .	39
1.8. Smarter buildings in a desirable habitat . . . . .	45
1.8.1. Buildings and living spaces . . . . .	45
1.8.2. Building trends in 2050. . . . .	46

1.8.3. Smart buildings . . . . .	47
1.9. Smart buildings as nodes of smart grids . . . . .	50
1.10. Methodological contributions . . . . .	52
1.11. The question of artificial intelligence. . . . .	53
1.12. References . . . . .	54
<b>Chapter 2. Smart City, Smart Building, Smart User: The Imaginaries of Smart and its Dead Ends . . . . .</b>	<b>59</b>
2.1. Introduction . . . . .	59
2.2. Reducing energy consumption: changing technologies or changing practices? . . . . .	60
2.2.1. Limits to energy efficiency. . . . .	60
2.2.2. Limits of an approach focused (solely) on practices. . . . .	61
2.2.3. Usage dependence on the technology used . . . . .	64
2.3. The smart imaginary and its dead ends . . . . .	67
2.3.1. Technical distancing as a common denominator. . . . .	68
2.3.2. The smart city or the imaginary of a city without inhabitants. . . . .	68
2.3.3. The smart building or the imaginary of a building parasitized by its users. . . . .	70
2.4. Conclusion: in search of the smart user?. . . . .	71
2.5. References . . . . .	73
<b>Chapter 3. Forecasting the Production and Consumption of Electrical Energy . . . . .</b>	<b>77</b>
3.1. Introduction . . . . .	77
3.2. Variability in production and consumption . . . . .	78
3.3. Photovoltaic production forecast . . . . .	80
3.3.1. Satellite image-based forecasting . . . . .	82
3.3.2. Short-term forecast by camera . . . . .	83
3.3.3. Neural network prediction . . . . .	85
3.3.4. Case study: 24-hour production forecast for the photovoltaic power plant at the Université Catholique de Lille. . . . .	89
3.4. Forecasting electricity consumption . . . . .	96
3.4.1. Important factors for forecasting electricity consumption. . . . .	96
3.4.2. Electricity consumption prediction methods . . . . .	97
3.4.3. Case study: 24-hour forecast of electricity consumption for a block of buildings at the Université Catholique de Lille . . . . .	98
3.5. Valorization of forecasts and feedback . . . . .	104
3.5.1. Using forecasts to manage energy for the Université Catholique de Lille smart grid demonstrator. . . . .	104
3.5.2. Load forecasting in a distribution network at a high-voltage/medium-voltage (HV/MV) source substation . . . . .	107

3.5.3. The importance of meteorological forecasting . . . . .	111
3.5.4. The importance of uncertainty analysis . . . . .	112
3.5.5. Importance of database size and quality . . . . .	113
3.6. Conclusion . . . . .	113
3.7. Acknowledgments . . . . .	114
3.8. References . . . . .	114

## **Chapter 4. Taking Actors into Account in Energy**

<b>Management Strategies . . . . .</b>	<b>117</b>
4.1. Introduction . . . . .	117
4.2. A system of actors in an electrical network . . . . .	120
4.2.1. The role of actors . . . . .	120
4.2.2. System operator . . . . .	121
4.2.3. Aggregator . . . . .	121
4.2.4. Producer . . . . .	122
4.2.5. Consumer . . . . .	123
4.2.6. Consumer–producer (prosumer) . . . . .	124
4.3. Methodology for managing energy flexibility involving actors . . . . .	124
4.3.1. Defining key concepts . . . . .	124
4.3.2. Comprehensive methodology for energy supervision . . . . .	126
4.4. Modeling actor profiles . . . . .	127
4.4.1. An interdisciplinary approach . . . . .	127
4.4.2. Existing actor profiles . . . . .	129
4.4.3. Observable profiles . . . . .	132
4.4.4. Integrable profiles . . . . .	132
4.5. Residential actor profiles . . . . .	134
4.5.1. Return feedback from experimentation/scale-one projects . . . . .	134
4.5.2. Consumer profile research . . . . .	135
4.5.3. Sociological approaches for accepting participation in network management . . . . .	136
4.5.4. Economic approaches for consumer involvement . . . . .	138
4.5.5. The need for interdisciplinarity . . . . .	139
4.5.6. Characterizing flexibility . . . . .	140
4.5.7. Parameters influencing flexibility . . . . .	144
4.6. Identification of residential actor profiles . . . . .	147
4.6.1. Introduction . . . . .	147
4.6.2. A microeconomic approach to price sensitivity . . . . .	147
4.6.3. A sociological approach to environmental awareness . . . . .	157
4.7. Profiles of selected residential actors . . . . .	158
4.7.1. Economical . . . . .	158
4.7.2. Eco-sensitive . . . . .	159
4.7.3. Technophiles . . . . .	159
4.7.4. Indifferent – moderate opportunists . . . . .	159

---

4.7.5. Disengaged . . . . .	159
4.7.6. Discussions . . . . .	159
4.8. Conclusion . . . . .	161
4.9. Acknowledgments . . . . .	162
4.10. References . . . . .	162
<b>Chapter 5. Energy Supervision of a Local Residential Network with Actor Involvement.</b> . . . . .	<b>169</b>
5.1. Introduction . . . . .	169
5.2. Energy supervision methodology . . . . .	170
5.3. Modeling a residential case study . . . . .	171
5.3.1. Electricity network under consideration . . . . .	171
5.3.2. Modeling consumption . . . . .	172
5.3.3. Discussion of model limitations . . . . .	174
5.4. Day ahead supervision (before D-1) . . . . .	174
5.4.1. Discussion of predictive supervision . . . . .	174
5.4.2. Implementing the D-1 supervisor . . . . .	180
5.4.3. Scope statement . . . . .	181
5.4.4. Modeling actor profiles . . . . .	185
5.4.5. Supervisor structure . . . . .	190
5.4.6. Global optimization and game theory . . . . .	192
5.4.7. Local optimization using dynamic programming . . . . .	195
5.5. Real-time supervision . . . . .	198
5.5.1. Discussion of real-time supervision . . . . .	198
5.5.2. Implementation of supervision in real time . . . . .	202
5.5.3. Continuity with D-1 supervisor . . . . .	202
5.5.4. Fuzzy logic supervisor . . . . .	203
5.5.5. Indicators . . . . .	213
5.6. Two-week prospective simulations of the global supervisor . . . . .	213
5.6.1. Scenarios . . . . .	213
5.6.2. Results and discussion . . . . .	215
5.7. Conclusion . . . . .	221
5.8. Acknowledgments . . . . .	223
5.9. References . . . . .	223
<b>Chapter 6. Self-Consumption within a Local Renewable Energy Community</b> . . . . .	<b>227</b>
6.1. Introduction . . . . .	227
6.2. Local renewable energy communities . . . . .	230
6.3. Modeling a tertiary-sector case study . . . . .	231
6.3.1. Historic block at the Université Catholique de Lille . . . . .	231
6.3.2. Modeling the electrical network . . . . .	233

6.4. Distributed energy optimization . . . . .	234
6.4.1. Introduction . . . . .	234
6.4.2. Energy exchanges within communities . . . . .	235
6.4.3. Distributed optimization of energy exchanges with game theory . . . . .	239
6.4.4. Simulation results . . . . .	251
6.5. Managing energy exchanges using blockchain technology . . . . .	258
6.5.1. Introduction . . . . .	258
6.5.2. The principle of blockchain . . . . .	259
6.5.3. Development of a local blockchain for managing energy exchanges in the renewable energy community . . . . .	261
6.5.4. Simulations and results . . . . .	269
6.6. Interpretations and experience feedback . . . . .	275
6.7. Conclusion . . . . .	275
6.8. Acknowledgments . . . . .	276
6.9. References . . . . .	277
<b>Chapter 7. Sustainable and Desirable Living Thanks to Smart Buildings . . . . .</b>	<b>281</b>
7.1. Introduction . . . . .	281
7.2. Smart building . . . . .	284
7.2.1. Definition of a smart building . . . . .	284
7.2.2. Services provided by a smart building . . . . .	285
7.3. Data processing and building management . . . . .	295
7.3.1. Introduction . . . . .	295
7.3.2. Dynamic energy optimization for buildings . . . . .	296
7.3.3. Indoor and outdoor air quality in a building . . . . .	306
7.3.4. Blockchain and buildings . . . . .	309
7.4. Environmental and climate impact of the building . . . . .	310
7.4.1. Introduction . . . . .	310
7.4.2. Renovating instead of building new . . . . .	311
7.4.3. Socio-technical management of a building . . . . .	313
7.4.4. Sufficiency in residential buildings . . . . .	315
7.5. Acknowledgments . . . . .	317
7.6. References . . . . .	318
<b>Chapter 8. Demonstration Sites . . . . .</b>	<b>321</b>
8.1. Introduction: full-scale implementation . . . . .	321
8.2. Technology Readiness Level . . . . .	322
8.3. Development of a smart grid demonstration site . . . . .	323
8.3.1. Demonstration projects . . . . .	325
8.4. An all-in-one demonstration site . . . . .	327

8.4.1. Introduction . . . . .	327
8.4.2. Controlling photovoltaic production . . . . .	327
8.4.3. Integration and control of electric vehicle charging . . . . .	330
8.4.4. Controlling electrical loads in buildings . . . . .	335
8.4.5. Electrical energy storage control . . . . .	343
8.4.6. Communication networks . . . . .	346
8.4.7. IT developments . . . . .	347
8.4.8. Perspectives . . . . .	348
8.5. The contribution of occupants of a service sector site to electricity savings . .	349
8.5.1. Evolution of the sources of energy consumption reduction . . . . .	350
8.5.2. Shaving potential at tertiary sites . . . . .	352
8.5.3. Exploring potential for load shedding in commercial sites . . . . .	357
8.5.4. Concluding remarks on both case studies. . . . .	365
8.6. Conclusion . . . . .	365
8.7. Acknowledgments . . . . .	366
8.8. References . . . . .	366
<b>Postface</b> . . . . .	369
<b>Index</b> . . . . .	375
