<b>Introduction</b> . . . . .	ix
<b>Part 1. Nanomaterials, Amplification, Separation, Recognition and Transduction</b> . . . . .	1
<b>Chapter 1. Nanomaterials</b> . . . . .	3
1.1. Carbon nanomaterials . . . . .	3
1.1.1. Fullerenes . . . . .	3
1.1.2. Carbon nanodiamonds (NDs). . . . .	6
1.1.3. Carbon quantum dots. . . . .	8
1.1.4. Carbon nanotubes. . . . .	11
1.1.5. Graphene . . . . .	16
1.1.6. Graphene quantum dots . . . . .	28
1.2. Inorganic nanomaterials . . . . .	32
1.2.1. Metal nanoparticles. . . . .	33
1.2.2. Metal nanoclusters (MNCs). . . . .	36
1.2.3. Semiconductor QDs . . . . .	37
1.2.4. Two-dimensional inorganic lamellar nanosheets . . . . .	40
1.2.5. Metal organic frameworks (MOFs) . . . . .	44
1.2.6. Methods for manufacturing MOFs. . . . .	45
1.3. Conclusions. . . . .	49
<b>Chapter 2. Separation and Amplification Techniques</b> . . . . .	53
2.1. Principle of the PCR technique applied to the concentration amplification of DNA traces . . . . .	53

---

2.2. Sequencing techniques . . . . .	57
2.3. Separation techniques for product mixtures . . . . .	61
2.3.1. Chromatography techniques . . . . .	61
2.3.2. Electrophoresis techniques . . . . .	65
2.4. Conclusions. . . . .	87
<b>Chapter 3. Recognition Principles. . . . .</b>	<b>89</b>
3.1. The different molecular or chemical identification techniques. . . . .	90
3.1.1. Ion detection using synthetic ligands . . . . .	90
3.1.2. Immunological recognition: antibodies, nanobodies and peptides . . . . .	92
3.1.3. Identification using nucleic acids: aptamers . . . . .	96
3.1.4. Recognition by molecularly imprinted polymers . . . . .	97
3.1.5. Recognition followed by transformation: enzymes and catalysts. . . . .	100
3.1.6. Recognition of gaseous species. . . . .	104
3.2. Sensor networks and artificial intelligence . . . . .	108
3.2.1. Basic principles . . . . .	108
3.2.2. Application to chemical sensors . . . . .	110
3.3. Conclusions. . . . .	112
<b>Chapter 4. Physico-chemical Transduction Techniques . . . . .</b>	<b>115</b>
4.1. Electrochemical methods. . . . .	116
4.1.1. Potentiometric analysis . . . . .	117
4.1.2. Voltametric analysis . . . . .	118
4.1.3. Impedancemetry . . . . .	121
4.2. Piezoelectricity for gravimetric analysis . . . . .	124
4.2.1. Quartz crystal microbalance . . . . .	124
4.2.2. Surface acoustic wave sensors . . . . .	126
4.3. Field effect transistors . . . . .	128
4.3.1. Operating principle of an FET . . . . .	128
4.3.2. Main FET devices applied to chemical analysis . . . . .	130
4.4. Optical and optoelectrochemical detection methods . . . . .	139
4.4.1. Luminescence of molecules. . . . .	139
4.4.2. Electrochemiluminescence . . . . .	142
4.4.3. Photoelectrochemistry . . . . .	159
4.4.4. Raman scattering spectroscopy. . . . .	168
4.4.5. Surface- and plasmon-enhanced resonance scattering . . . . .	170
4.5. Conclusions. . . . .	178

---

<b>Part 2. Environmental and Biological Sensors</b> . . . . .	181
<b>Chapter 5. Ion and Gas Sensors</b> . . . . .	183
5.1. Membrane electrodes for potentiometric pH measurement. . . . .	184
5.2. Ion selective electrodes (ISE) . . . . .	186
5.2.1. Toward ISEs with very low detection limits . . . . .	189
5.2.2. Solid contact ISEs . . . . .	191
5.2.3. Conclusions on ISE electrodes . . . . .	199
5.3. Gas sensors . . . . .	200
5.3.1. Gas sensors based on nanostructured metal oxides . . . . .	200
5.3.2. Gas sensors based on conductive polymers . . . . .	203
5.3.3. Gas sensors based on two-dimensional thin-film materials . . . . .	208
5.3.4. Sensor networks and their use in artificial noses . . . . .	221
5.4. Conclusions. . . . .	232
<b>Chapter 6. Biosensors for Health</b> . . . . .	235
6.1. Blood sugar, uremia and cholesterol . . . . .	236
6.1.1. Blood sugar . . . . .	236
6.1.2. Uremia . . . . .	246
6.1.3. Cholesterol. . . . .	251
6.2. Biomarkers . . . . .	254
6.2.1. Cancer biomarkers . . . . .	256
6.2.2. Cardiac disease biomarkers . . . . .	260
6.2.3. Stress biomarkers . . . . .	266
6.3. Pathogens . . . . .	275
6.3.1. Virus detection . . . . .	275
6.3.2. Toxin detection . . . . .	284
6.4. Conclusions. . . . .	286
<b>Conclusion</b> . . . . .	287
<b>References</b> . . . . .	289
<b>Index</b> . . . . .	333
