Aurélie HUA-VAN and Pierre CAPY	
<b>Introduction</b> . . . . .	xv
Aurélie HUA-VAN and Pierre CAPY	
<b>Chapter 1. Transposable Elements in Eukaryotes</b> . . . . .	1
Aurélie HUA-VAN	
1.1. Introduction. . . . .	1
1.2. Classification, structure and transposition mechanism . . . . .	2
1.2.1. Class I. . . . .	4
1.2.2. Class II . . . . .	7
1.2.3. Autonomous, non-autonomous and relics. . . . .	10
1.3. Abundance, diversity and distribution . . . . .	10
1.4. Origins of transposable elements and evolutionary relationships with other genetic elements . . . . .	12
1.5. Genomic impact . . . . .	14
1.5.1. Genome size . . . . .	15
1.5.2. Genome structure . . . . .	15
1.5.3. Genome function and evolution . . . . .	16
1.6. References . . . . .	17

<b>Chapter 2. Prokaryotic Transposable Elements</b> . . . . .	21
Alessandro M. VARANI, Karen E. ROSS and Mick CHANDLER	
2.1. Introduction. . . . .	21
2.1.1. Historical. . . . .	21
2.1.2. Relationship between IS and transposons. . . . .	22
2.1.3. The prokaryotic TE landscape . . . . .	23
2.2. Transposases: the enzymes driving transposition . . . . .	25
2.2.1. DDE enzymes . . . . .	25
2.2.2. HUH enzymes . . . . .	27
2.3. Insertion sequences . . . . .	28
2.3.1. Overview. . . . .	28
2.3.2. Impact. . . . .	29
2.3.3. IS diversity. . . . .	30
2.3.4. IS-related elements: tIS, MITEs and MICs. . . . .	30
2.4. Transposons (Tn) . . . . .	32
2.4.1. Compound transposons . . . . .	32
2.4.2. Pseudocompound transposons, targeted insertion and translocatable units (TU) . . . . .	33
2.4.3. Unit transposons with DDE transposases . . . . .	34
2.4.4. Transposon using CRISPR components. . . . .	45
2.4.5. Mobile elements which move using site-specific recombinases. . .	46
2.5. Conclusion . . . . .	52
2.6. References . . . . .	53
<b>Chapter 3. Transposable Elements and Human Diseases</b> . . . . .	61
Benoît CHÉNAIS	
3.1. The moving parts of the human genome. . . . .	61
3.2. TE insertion and its impact on the genome and gene expression . . . .	64
3.2.1. Chromosomal rearrangements . . . . .	64
3.2.2. Modification of gene structure and expression by TE insertion . . .	66
3.2.3. Escaping epigenetic control . . . . .	68
3.3. TE involvement in human cancers . . . . .	69
3.3.1. Inserting LINE-1 . . . . .	69
3.3.2. Insertion of Alu sequences and chromosomal recombination . . .	70
3.3.3. Epigenetic alterations due to TE and cancer . . . . .	72
3.4. Involvement of TEs in noncancerous pathologies . . . . .	72
3.4.1. Implications of TE in hemoglobinopathies . . . . .	72
3.4.2. Implications of TEs in metabolic diseases or diseases linked to metabolic genes . . . . .	73

3.4.3. Implications of TEs in neurological diseases . . . . .	76
3.4.4. Implications of TE in various other diseases . . . . .	77
3.4.5. Link between TE and common diseases . . . . .	78
3.5. The role of stress and environmental pollution in TE mobility . . . . .	79
3.5.1. Epigenetic alterations caused by environmental pollutants . . . . .	79
3.5.2. Methylation and mobility of LINE-1 elements in response to environmental stresses . . . . .	80
3.5.3. Influence of occupational and psychosocial stresses on the mobility of LINE-1 elements. . . . .	81
3.6. Conclusion . . . . .	82
3.7. References . . . . .	82
<b>Chapter 4. The Silencing Mechanisms Inhibiting Transposable Element Activity in Somatic and Germ Cells . . . . .</b>	<b>91</b>
Chantal VAURY	
4.1. Introduction. . . . .	91
4.2. Silencing of transposable elements in somatic tissues. . . . .	92
4.2.1. Mechanisms that ensure deposition of epigenetic hallmarks at TEs . . . . .	92
4.2.2. Inheritance of the epigenetic state of TEs through cell division . . . . .	95
4.2.3. Influence of environmental stresses on TE control in somatic cells. . . . .	96
4.3. Silencing of transposable elements in the germline . . . . .	97
4.3.1. The piRNA pathway in ovarian germ cells . . . . .	97
4.3.2. Additional strategies used to silence TEs in the germline . . . . .	100
4.4. The specific case of somatic cells surrounding the germline . . . . .	102
4.5. Transmission of silencing through generations. . . . .	103
4.6. Environmental stresses and their influence on TEs . . . . .	105
4.7. Conclusion . . . . .	107
4.8. References . . . . .	107
<b>Chapter 5. Transposable Elements and Adaptation . . . . .</b>	<b>115</b>
Marta CORONADO-ZAMORA and Josefa GONZÁLEZ	
5.1. Transposable elements are mobile genomic sequences . . . . .	115
5.1.1. Transposable elements are diverse genomic sequences. . . . .	116
5.1.2. Transposable elements generate different types of mutations . . . . .	117
5.2. Transposable elements and insecticide resistance . . . . .	119
5.2.1. Transposable elements and metabolic resistance . . . . .	120
5.2.2. Target resistance and transposable elements . . . . .	123

5.3. Transposable elements and the immune response . . . . .	125
5.4. Transposable elements and environmental shock response. . . . .	126
5.5. Conclusion . . . . .	130
5.6. Acknowledgments . . . . .	130
5.7. References . . . . .	131
<b>Chapter 6. Domestication (Exaptation) of Transposable Elements . . . . .</b>	<b>135</b>
Christopher ELLISON	
6.1. Introduction. . . . .	135
6.2. Host genes derived from transposons . . . . .	137
6.2.1. Repeated domestication of transposases . . . . .	137
6.2.2. Repeated domestication of envelope genes . . . . .	140
6.3. TEs can disperse noncoding regulatory sequences across the genome. . . . .	141
6.4. TEs form structural components of the genome . . . . .	143
6.4.1. Transposons function in centromere specification. . . . .	143
6.4.2. Transposons act as telomeres in <i>Drosophila</i> . . . . .	144
6.5. Summary . . . . .	145
6.6. References . . . . .	145
<b>Chapter 7. Horizontal Transfers and Transposable Elements . . . . .</b>	<b>149</b>
Emmanuelle LERAT	
7.1. Introduction. . . . .	149
7.2. Mechanisms and prerequisites for horizontal transfers of transposable elements . . . . .	152
7.2.1. Direct transmission . . . . .	152
7.2.2. Transmission by a viral vector . . . . .	153
7.2.3. Transmission via host–pathogen interactions. . . . .	155
7.2.4. Factors for successful horizontal transfer of transposable elements . . . . .	156
7.3. Bioinformatics methods for detecting horizontal transfer of transposable elements . . . . .	157
7.3.1. HTdetect . . . . .	158
7.3.2. VHICA . . . . .	159
7.4. Documented examples of horizontal transfers of transposable elements . . . . .	160
7.5. The impact of horizontal transfers of transposable elements . . . . .	163

7.5.1. Adaptation and creation of gene novelties . . . . .	163
7.5.2. The appearance of new species . . . . .	164
7.6. Conclusion . . . . .	165
7.7. References . . . . .	165
<b>Chapter 8. Genome Invasion Dynamics . . . . .</b>	<b>175</b>
Arnaud LE ROUZIC and Aurélie HUA-VAN	
8.1. The lifecycle of transposable elements. . . . .	175
8.2. Transposable elements as parasites of sexual reproduction. . . . .	177
8.2.1. Amplification . . . . .	177
8.2.2. The selfish DNA model . . . . .	177
8.3. Limiting the spread . . . . .	178
8.3.1. Natural selection . . . . .	179
8.3.2. Transposition regulation . . . . .	181
8.4. Long-term evolution . . . . .	182
8.4.1. Interactions between TE copies. . . . .	182
8.4.2. Selection on TE sequences . . . . .	183
8.5. The intriguing case of asexuals . . . . .	183
8.6. Transposable element genomics. . . . .	185
8.6.1. Transposition rates obtained in the lab . . . . .	185
8.6.2. Comparative genomics of assembled genomes . . . . .	186
8.6.3. Population genomics . . . . .	187
8.7. Conclusion . . . . .	188
8.8. References . . . . .	189
<b>Chapter 9. The Ecology of Transposable Elements . . . . .</b>	<b>193</b>
Pierre CAPY, Christian BIÉMONT and Cristina VIEIRA	
9.1. Introduction. . . . .	193
9.1.1. Lifecycle of a transposable element . . . . .	193
9.1.2. Variability in the number of copies . . . . .	196
9.1.3. What does the genome represent for a transposable element? . . . . .	197
9.2. Cellular, population and specific dynamics . . . . .	198
9.2.1. The dynamics of transposable elements vary from cell to cell. . . . .	198
9.2.2. Interactions between groups of transposable elements within a genome . . . . .	199
9.2.3. Transposable element environment and activity . . . . .	200
9.2.4. Scales of structuring: from the copy to the ecosystem . . . . .	201
9.3. The “genome ecology” approach . . . . .	204

9.3.1. Ecological niche theory . . . . .	205
9.3.2. Neutralist theory of biodiversity . . . . .	206
9.3.3. Comments . . . . .	210
9.4. Conclusion . . . . .	210
9.5. References . . . . .	211
<b>Chapter 10. Transposable Elements as Tools . . . . .</b>	<b>223</b>
Chengyi SONG and Zoltán IVICS	
10.1. Introduction . . . . .	223
10.2. Development of DNA transposons as genetic tools . . . . .	226
10.2.1. Discovery and de novo engineering of genetic tools based on active DNA transposons . . . . .	226
10.2.2. DNA transposons popularly applied as genetic tools . . . . .	227
10.2.3. Insertion preference and cargo capacity of DNA transposons . .	230
10.3. DNA transposons as efficient gene transfer tools applied in important model organisms . . . . .	232
10.4. Insertional mutagenesis based on engineered transposons . . . . .	233
10.5. Application of transposons in human gene therapy. . . . .	237
10.5.1. Gene therapy in vivo . . . . .	238
10.5.2. Ex vivo cell engineering with transposons . . . . .	239
10.5.3. Induced pluripotent stem cell reprogramming with transposons . . . . .	240
10.6. Transposase as an excision tool . . . . .	241
10.7. Toward specific gene targeting by fusing transposases with other nucleases . . . . .	242
10.8. Conclusion . . . . .	243
10.9. References. . . . .	244
<b>Chapter 11. Genomic Characterization of Transposable Elements: Databases and Software. . . . .</b>	<b>255</b>
Gabriel DA LUZ WALLAU	
11.1. Introduction . . . . .	255
11.2. Databases . . . . .	256
11.3. Search strategies for transposable element characterization. . . . .	260
11.4. Nature of input sequences . . . . .	263
11.4.1. Raw reads. . . . .	263
11.4.2. Draft or complete genome assembly . . . . .	263

11.5. Population genomics of transposable elements . . . . .	264
11.6. How to evaluate the most suitable database and TE/MGEs search strategy for your study? . . . . .	267
11.7. Acknowledgments . . . . .	268
11.8. References. . . . .	268
