| Foreword | ix |
| Preface | xi |
| Chapter 1. Symmetry of Triatomic Molecules | 1 |
| 1.1. Introduction | 1 |
| 1.2. The symmetry group of the Hamiltonian of a triatomic molecule | 3 |
| 1.3. Symmetry of the nonlinear triatomic molecule (O_3) | 6 |
| 1.3.1. The nonlinear asymmetric molecule O_3 ($^{16}O^{16}O^{18}O$ (668)) | 8 |
| 1.3.2. The nonlinear symmetric molecule O_3 ($^{16}O^{16}O^{16}O$ (666)) | 9 |
| 1.3.3. Symmetry of eigenstates of a nonlinear molecule | 11 |
| 1.4. Symmetry of the linear triatomic molecule (CO_2) | 15 |
| 1.4.1. The linear asymmetric molecule CO_2 ($^{16}O^{12}C^{18}O$ (628)) | 17 |
| 1.4.2. The linear symmetric molecule CO_2 ($^{16}O^{12}C^{16}O$ (626)) | 19 |
| 1.5. Selection rules | 20 |
| 1.5.1. Symmetry of the eigenstates of a triatomic molecule taking into account the nuclei spins | 21 |
| Chapter 2. Energy Levels of Triatomic Molecules in Gaseous Phase | 25 |
| 2.1. Introduction | 26 |
| 2.2. Vibrational–rotational movements of an isolated molecule | 27 |
| 2.3. Vibrational movements of an isolated triatomic molecule | 34 |
| 2.3.1. Nonlinear triatomic molecules | 35 |
| 2.3.2. Linear triatomic molecules | 36 |
| 2.3.3. Introduction of the perturbative Hamiltonians H_1, H_2, H_3, \dots | 37 |
| 2.3.4. Transitions between two vibrational levels: selection rules | 38 |
| 2.4. Rotational movement of an isolated rigid molecule | 40 |

| | |
|---|-----------|
| 2.4.1. Linear triatomic molecules | 42 |
| 2.4.2. Symmetric top molecules | 42 |
| 2.4.3. Nonlinear triatomic molecules | 43 |
| 2.4.4. Transitions between rotational levels | 46 |
| 2.5. Vibrational–rotational energy levels of an isolated triatomic molecule | 47 |
| 2.6. Rovibrational transitions: selection rules | 48 |
| 2.6.1. Dipole moment in terms of normal coordinates | 50 |
| 2.7. Appendices | 56 |
| 2.7.1. Rotational matrix | 56 |
| 2.7.2. Perturbative Hamiltonians of vibration and vibration–rotation coupling. | 59 |
| 2.7.3. Components of the angular momentum \vec{J} | 60 |
| 2.7.4. Rotational Hamiltonian of a symmetric top. | 60 |
| 2.7.5. Elements of the rotational matrix | 61 |
| 2.7.6. Vibrational anharmonic constants | 62 |
| Chapter 3. Clathrate Nano-Cages | 65 |
| 3.1. Introduction | 66 |
| 3.2. Clathrate structures | 67 |
| 3.3. Inclusion model of a triatomic molecule in a clathrate nano-cage | 69 |
| 3.3.1. Inclusion model | 69 |
| 3.3.2. Interaction potential energy | 71 |
| 3.4. Thermodynamic model of clathrates | 73 |
| 3.4.1. Occupation fractions and Langmuir constants | 74 |
| 3.4.2. Determination of the Langmuir constants. | 74 |
| 3.4.3. Application to triatomic molecules | 75 |
| 3.5. Infrared spectrum of a triatomic in clathrate matrix | 79 |
| 3.5.1. Infrared absorption coefficient. | 79 |
| 3.5.2. Hamiltonian of the system and separation of movements | 79 |
| 3.5.3. Vibrational motions. | 83 |
| 3.5.4. Orientational motion | 83 |
| 3.5.5. Translational motion | 84 |
| 3.5.6. Bar spectra. | 84 |
| 3.6. Application to the CO ₂ molecule | 86 |
| 3.6.1. Vibrational motions. | 86 |
| 3.6.2. Orientational motion | 88 |
| 3.6.3. Translational motion | 94 |
| 3.6.4. Bar spectra. | 95 |
| 3.7. Appendices | 98 |

| | |
|---|------------|
| 3.7.1. Non-zero orientation matrix elements used to calculate the corrections to first-order perturbation energies | 98 |
| 3.7.2. Correction to eigenenergies of the orientation Hamiltonian. | 99 |
| 3.7.3. Expressions of the vector components derivatives of the dipole moment with respect to the normal vibrational coordinates. | 102 |
| 3.7.4. Expressions of the orientational transition elements in the approximation of harmonic librators | 102 |
| Chapter 4. Nano-Cages of Noble Gas Matrices | 107 |
| 4.1. Introduction | 108 |
| 4.2. The theoretical molecule–matrix model | 110 |
| 4.2.1. Site inclusion model | 110 |
| 4.2.2. 12-6 L-J potential | 112 |
| 4.2.3. Site distortion | 116 |
| 4.2.4. Coupling of the molecule–matrix system | 118 |
| 4.2.5. Vibrational frequency displacements | 119 |
| 4.2.6. The calculation of the orientational modes | 123 |
| 4.2.7. Bar spectra and spectral profiles. | 124 |
| 4.3. Application to triatomic molecules. | 126 |
| 4.3.1. The triatomic molecule C_3 | 126 |
| 4.3.2. The nonlinear triatomic molecule O_3 | 135 |
| 4.4. Appendix: Program for determining the equilibrium configuration of an O_3 molecule in a noble gas matrix nano-cage | 140 |
| Chapter 5. Effect of Nano-Cages on Vibration. | 145 |
| 5.1. Introduction | 145 |
| 5.2. The theoretical molecule–matrix model | 146 |
| 5.3. Calculation of the shift of vibrational frequencies | 147 |
| 5.3.1. Calculation principle | 147 |
| 5.3.2. Application of the MAPLE program | 151 |
| 5.4. Application to linear triatomic molecules | 155 |
| 5.4.1. Experimental study of linear triatomic molecules (CO_2 , N_2O) | 155 |
| 5.4.2. Frequency shift calculation for degenerate mode ν_2 | 156 |
| 5.4.3. Calculation results for linear triatomic molecules (CO_2 , N_2O) | 158 |
| 5.5. Appendices | 163 |
| 5.5.1. Transition from Cartesian coordinates to normal coordinates. | 163 |
| 5.5.2. MAPLE program for displacement/shifts of vibrational frequency modes of a CO_2 molecule in a noble gas nano-cage matrix | 166 |

| | |
|--|-----|
| Chapter 6. Adsorption on a Graphite Substrate | 173 |
| 6.1. Molecule adsorbed on a graphite substrate (1000) at low temperature | 173 |
| 6.1.1. Astrophysical context | 173 |
| 6.1.2. Molecule adsorbed onto a graphite substrate | 175 |
| 6.1.3. Graphite substrate–molecule interaction energy | 176 |
| 6.2. Adsorption observables at low temperature | 178 |
| 6.2.1. Equilibrium configuration and potential energy surface | 178 |
| 6.2.2. Adsorption energy | 181 |
| 6.2.3. Diffusion constant | 181 |
| 6.3. Interaction energy between two molecules | 183 |
| 6.3.1. Electrostatic contribution | 184 |
| 6.3.2. Induction contribution | 187 |
| 6.3.3. Dispersion–repulsion contribution | 188 |
| 6.4. Appendices | 188 |
| 6.4.1. Expressions of action tensors | 188 |
| 6.4.2. Multipolar moments and dipolar polarizability of a molecule relative to the fixed (absolute) reference frame | 191 |
| 6.4.3. Code in the FORTRAN language for the calculation of the interaction potential energy between two molecules | 191 |
| Bibliography | 203 |
| Index | 211 |
