Introduction	ix
Chapter 1. Introduction to QGIS	1
Nicolas MOYROUD and Frédéric PORTET	
1.1. History	1
1.2. QGIS graphical user interface	2
1.2.1. Standard interface	2
1.2.2. Settings	3
1.2.3. Add layer	4
1.2.4. QGIS project	5
1.2.5. Navigation	5
1.2.6. Attributes of entities	6
1.3. The processing module, the toolkit for spatial analysis	6
1.3.1. History and interest of the treatment module	6
1.3.2. Presentation of the toolbox and its algorithms	7
1.3.3. Example of an algorithm's execution	10
1.3.4. Adding custom Python scripts	11
1.3.5. The graphic modeler	13
1.3.6. Batch processing	16
Chapter 2. Introduction to GDAL Tools in QGIS	19
Kenji OSE	
2.1. GDAL: the Swiss army knife of raster processing	19
2.1.1. What is GDAL used for?	19
2.1.2. Licenses	19
2.1.3. How is GDAL used?	20
2.1.4. How GDAL works in QGIS	23
2.2. GDAL tools: practical examples	26

2.2.1. Introduction	26
2.2.2. Useful data	27
2.2.3. Reading image metadata	29
2.2.4. Basic processing of raster files	33
2.2.5. Analysis tools	44
2.3. Bibliography	65
Chapter 3. GRASS GIS Software with QGIS	67
Bernard LACAZE, Julita DUDEK and Jérôme PICARD	
3.1. Presentation	67
3.1.1. GRASS software: a modular GIS package	67
3.1.2. Vector functions (v.*)	68
3.1.3. GIS raster functions (r.*)	70
3.1.4. Imagery functions (i.* or r.*)	73
3.1.5. Temporal functions	74
3.2. GRASS GIS download and GRASS plugin in QGIS	77
3.2.1. Operating systems for GRASS GIS software	77
3.2.2. QGIS interface for GRASS GIS	77
3.3. GRASS GIS capabilities	79
3.3.1. Definition of a GRASS GIS project: location and mapsets	79
3.3.2. Modifications of the GRASS region	80
3.3.3. Importing raster data into GRASS	81
3.3.4. Importing vector data into GRASS	83
3.3.5. Image georeferencing	84
3.3.6. Radiometric preprocessing of images	85
3.3.7. Pan-sharpening	86
3.3.8. Computation of spectral indices and biophysical parameters	86
3.3.9. Classifications and segmentation	87
3.4. Using Grass GIS functions from QGIS	89
3.4.1. Creating, opening, closing a dataset and adding a raster file	90
3.4.2. Creating, adding, editing a vector layer	95
3.4.3. Examples of image processing with QGIS-GRASS	97
3.5. Acknowledgments	106
3.6. Bibliography	106
Chapter 4. The Use of SAGA GIS Modules in QGIS	107
Paul PASSY and Sylvain THÉRY	
4.1. SAGA GIS in QGIS	107
4.1.1. Development of SAGA GIS	107
4.1.2. SAGA GIS interface in QGIS	108
4.2. Using SAGA GIS to work with multispectral satellite images	111
4.2.1. Methodology	111

4.2.2. Acquisition and presentation of used data	112
4.2.3. Correction of the satellite images	112
4.2.4. Cropping the images according to the study area	115
4.2.5. Color composites and exploration of the area	116
4.2.6. Calculation of indices in order to extract vegetation and water surfaces.	119
4.3. Hydrological network extraction using SAGA GIS in QGIS.	131
4.3.1. Interests.	131
4.3.2. DEM preprocessing	132
4.3.3. Filling sinks	135
4.3.4. Hydrographic network extraction	137
4.4. Interpolation using SAGA GIS	140
4.4.1. Principle of the interpolation	140
4.4.2. Interpolation of measures of water quality in the aquifers of the Seine basin.	140
4.5. Bibliography	148
Chapter 5. Orfeo ToolBox Applications	151
Rémi CRESSON, Manuel GRIZONNET and Julien MICHEL	
5.1. The Orfeo ToolBox	151
5.1.1. Introduction	151
5.1.2. History	151
5.1.3. Application features	153
5.1.4. Governance and community	153
5.1.5. C++ library	155
5.1.6. Internal mechanisms	156
5.1.7. Download and installation.	158
5.2. Using OTB applications	158
5.2.1. Interface	158
5.2.2. Command line interface	161
5.2.3. Graphical user interface	164
5.2.4. Use from QGIS	165
5.2.5. Python bindings.	165
5.2.6. Monteverdi.	166
5.3. Exercises	167
5.3.1. Basic tools	167
5.3.2. Applications for image preprocessing	190
5.3.3. Feature extraction applications	221
5.3.4. Classification	231
5.4. Conclusion	240
5.5. Acknowledgments.	240
5.6. Bibliography	240

Chapter 6. Online Publication of a Land Cover Map Using LizMap	243
Jean-Baptiste LAURENT and Louise LEROUX	
6.1. Context	243
6.2. Workflow to publish a map online using LizMap	244
6.2.1. Presentation of LizMap	245
6.2.2. Main steps for publishing a map online with LizMap	246
6.3. Implementation with QGIS	247
6.3.1. Setup a QGIS project for Web	247
6.3.2. Setup a QGIS project for LizMap	248
6.3.3. Publish the map by FTP	251
6.3.4. Some tips to go further.	253
6.4. Bibliography	255
Chapter 7. GeoHealth and QuickOSM, Two QGIS Plugins for Health Applications	257
Vincent HERBRETEAU, Christophe RÉVILLION and Etienne TRIMAILLE	
7.1. Background on the use of GIS for health and the development of dedicated plugins in QGIS	257
7.2. Methodology	258
7.2.1. Importing data.	259
7.2.2. Case geolocation	260
7.2.3. Data anonymization (“blurring”).	260
7.2.4. Creating an incidence or density map	262
7.2.5. Importing data from the OSM database.	262
7.2.6. Environmental analyses	264
7.2.7. Export.	265
7.3. Implementation: GeoHealth, assisted mapping with QGIS.	267
7.3.1. Installation of GeoHealth and QuickOSM plugins	267
7.3.2. Datasets.	268
7.3.3. Producing an incidence map with the GeoHealth plugin.	268
7.3.4. “Blurring” of point data with GeoHealth and QuickOSM plugins	271
7.3.5. Example of spatial analyzes for health studies.	277
7.3.6. Contribution to the OSM database using satellite images	281
7.4. Bibliography	286
List of Authors	287
Index	289
Scientific Committee	293
