<b>Preface</b> . . . . .	xi
<b>Chapter 1. City and Complexity: How to Untangle the Skein?</b> . . . . .	1
1.1. Systemic thinking and its historical context . . . . .	1
1.2. The system approach . . . . .	3
1.3. Analytical and systemic methods are complementary rather than opposed . . . . .	4
1.4. Transdisciplinarity of the concept of system and presentation of a typology of complexity . . . . .	5
1.5. The concept of variety. . . . .	10
1.6. Keys to analyzing a system: functions and structures . . . . .	12
1.6.1. The concept of function . . . . .	13
1.6.2. The concept of structure . . . . .	15
1.7. From description to analysis and action: the example of flowcharts . . . . .	16
1.8. Concept of model and systemic modeling . . . . .	19
1.9. An application of systemic analysis: study of the relationships between transport networks and territory . . . . .	21
1.10. Action as a method of knowledge. . . . .	25
<b>Chapter 2. Town Planning and Urban Pattern: the Emergence of Circulatory Function.</b> . . . . .	29
2.1. The first urban fabrics: two founding patterns . . . . .	29
2.2. Advent of circulatory function . . . . .	31
2.2.1. Powerful changes implemented . . . . .	31
2.2.2. Cerdà, the theoretician . . . . .	32
2.2.3. Haussmann, the realist . . . . .	33

2.3. The effects of the mechanization of modes of transport . . . . .	35
2.3.1. The linear city of Arturo Soria y Mata . . . . .	36
2.3.2. Garden cities . . . . .	37
2.4. Urban transport: a chaotic development . . . . .	39
2.4.1. A public interest service . . . . .	39
2.4.2. Mechanization. . . . .	40
2.5. Advent of electric traction and its success following the construction of the Paris subway . . . . .	41
2.5.1. The accident “founder” of the Couronnes station . . . . .	42
2.5.2. The first wave of automation . . . . .	43
2.5.3. The triptych of innovation: technologies, organization and professions. . . . .	44
2.6. The tramway: from its disappearance in France to its rebirth . . . . .	45
2.6.1. The development period . . . . .	46
2.6.2. Decline of the tramway. . . . .	47
2.6.3. The rebirth. . . . .	49
2.7. The automobile city . . . . .	50
2.7.1. Progressive town planning and the functional specification of spaces . . . . .	50
2.7.2. The convergence between functionalism and naturalism . . . . .	52
2.8. Towards the public transport city? . . . . .	54
2.8.1. The “omnipresent automobile” in question. . . . .	54
2.8.2. “Transport-oriented development” . . . . .	55
2.8.3. The end of utopias? . . . . .	57
<b>Chapter 3. Building of New Towns: an Attempt at Linking Transport Networks to Urban Planning . . . . .</b>	<b>59</b>
3.1. From imaginary new towns to their achievement. . . . .	60
3.1.1. The initial project . . . . .	60
3.1.2. A new territorial organization . . . . .	65
3.1.3. The structuring role of big transportation infrastructures . . . . .	66
3.1.4. A period rich in innovations . . . . .	66
3.1.5. An undeniable success? . . . . .	67
3.2. The case of Marne-la-Vallée . . . . .	68
3.2.1. Marne-la-Vallée’s entry into the regional space . . . . .	68
3.2.2. The evolution of the overall administrative and institutional framework of new towns . . . . .	72
3.2.3. The specific institutional organization of Marne-la-Vallée . . . . .	74
3.3 A mixed report . . . . .	77
3.3.1. Population growth stimulated by housing construction . . . . .	77

3.3.2. Activities, employment and job/active population balance in new towns . . . . .	80
3.3.3. The importance of areas reserved for activities. . . . .	82
3.3.4. Employment location areas and source of active population . . . . .	83
3.3.5. Internal circulation in Marne-la-Vallée new town – the most overlooked of urban planning. . . . .	84
3.3.6. Motorization and servicing of the population by public transport. . . . .	87
3.3.7. Gradual saturation of the main road network. . . . .	88
3.3.8. What lessons can be drawn? . . . . .	90
<b>Chapter 4. Models and Definitions: Changing the Paradigm . . . . .</b>	<b>93</b>
4.1. The mobility model that was developed in France from the 1950s . . . . .	95
4.1.1. Mobility and urban sprawl . . . . .	96
4.1.2. Mobility and land market. . . . .	98
4.1.3. Characteristics specific to France? . . . . .	102
4.1.4. Planning “formatted” by the use of cars . . . . .	104
4.2. A model whose coherence and sustainability are undermined. . . . .	107
4.2.1. Lessons of the subprime crisis . . . . .	110
4.2.2. Land rents create shortages . . . . .	113
4.2.3. A system that aggravates socio-spatial disparities . . . . .	115
4.2.4. The forms taken by urbanization in France present real advantages . . . . .	116
4.3. Back to town planning. . . . .	117
4.3.1. Two essential models. . . . .	118
4.3.2. From models to concrete cities . . . . .	121
4.3.3. Town planning as a coherent layout of places, functions, structures, representations and forms. . . . .	123
<b>Chapter 5. Good Practices and Levers of Action . . . . .</b>	<b>125</b>
5.1 Influence of urban metrics . . . . .	125
5.1.1. Urban form: what is it all about? . . . . .	125
5.1.2. Reflecting on real cities and choosing a systematic approach. . . . .	129
5.2. Innovations and good practices. . . . .	130
5.2.1. European cities . . . . .	132
5.2.2. The North American case . . . . .	146
5.3. Major levers of action . . . . .	159
5.3.1. Land use planning and transport networks . . . . .	160
5.3.2. Transport-specific measures . . . . .	164
5.3.3. Tariff and regulatory measures . . . . .	170
5.3.4. What should be expected of new technologies? . . . . .	172

---

<b>Chapter 6. What if the 21st Century was the Century of Suburbs?</b> . . . . .	177
6.1. French cities: undeniable progress but a long way to go . . . . .	177
6.1.1. Legislative progress. . . . .	178
6.1.2. Tangible results, but shortcomings and strong resistance . . . . .	179
6.2. Suburbs: characteristics, challenges and future prospects . . . . .	181
6.2.1. History and semantics of the suburb . . . . .	182
6.2.2. The suburbs change dimension with the industrial revolution . . . . .	183
6.2.3. From workers' houses to the construction of large complexes . . . . .	184
6.2.4. Transport in difficulties. . . . .	185
6.2.5. A real potential for sustainable urban development . . . . .	189
6.3. A prospective reflection by 2050. . . . .	190
6.3.1. The context of the study . . . . .	190
6.3.2. Assumptions adopted for establishing a "target scenario" . . . . .	192
6.3.3. Method used for the simulation of the target scenario . . . . .	193
6.3.4. Achieved results. . . . .	196
6.3.5. Elements concerning the financial equation . . . . .	197
6.4. Transport and town planning articulation at the local level: the case of the southern suburbs of Ile-de-France . . . . .	198
6.4.1. The Trans Val-de-Marne . . . . .	199
6.4.2. Setting up of the line 183 dedicated bus lane. . . . .	202
6.5. Significance and diversity of local approaches . . . . .	207
6.5.1. The municipalities that objected . . . . .	208
6.5.2. Municipalities that might have wished to do better . . . . .	211
6.5.3. Municipalities that succeeded in making dedicated lanes a lever for urban restructuring: the case of Vitry-sur-Seine . . . . .	215
6.5.4. What lessons? . . . . .	222
<b>Chapter 7. Methods and Tools for Urban Transition</b> . . . . .	229
7.1. Urban transition and prospective . . . . .	229
7.2. An iterative and interactive approach . . . . .	231
7.3. Backcasting and forecasting approaches. . . . .	233
7.4. Development of a conceptual framework for the assessment and monitoring of the transition process (backcasting approach). . . . .	235
7.4.1. Importance of territorial diagnosis. . . . .	235
7.4.2. The establishment of a complete and coherent set of indicators . . . . .	236
7.4.3. Advantages of the proposed conceptual framework . . . . .	244
7.5. Assessment methods. . . . .	245
7.5.1. Methods based on life cycle assessment (LCA) . . . . .	245
7.5.2. Socio-economic methods. . . . .	254

7.6. Transport models and the difficult question of demand forecast . . . . .	263
7.6.1. Rebound phenomenon . . . . .	263
7.6.2. Transport models . . . . .	266
7.6.3. Land use models . . . . .	270
<b>Conclusion</b> . . . . .	279
<b>Glossary</b> . . . . .	285
<b>References</b> . . . . .	289
<b>Index</b> . . . . .	309
