Introduction	xi
Chapter 1. The Rationale of the System and the Diversity of the Forms of Protection	1
1.1. Going back to the origins and goals of intellectual property law	1
1.1.1. Some historical points of reference	1
1.1.2. Some market failures that must be addressed	3
1.2. The formal tools of intellectual property law	5
1.2.1. Patents	6
1.2.2. Trademarks	7
1.2.3. Industrial design right	8
1.2.4. Other technological creations (utility patents, plant variety rights, etc.)	9
1.2.5. Copyright and neighboring rights	9
1.3. Informal means of protection	10
1.3.1. Trade secrets.	11
1.3.2. Lead time.	11
1.3.3. The control of complementary assets	11
1.3.4. Design complexity	12
Chapter 2. How Companies Choose these Tools	13
2.1. The factors behind the choice to use these different tools.	15
2.1.1. Differences according to the country considered	15
2.1.2. Differences according to the size of the company.	16

2.1.3. Differences according to the stage in the innovation process	17
2.1.4. Differences according to the type of innovation (process or product)	18
2.1.5. Another key factor: the types of market or technology considered	19
2.1.6. Marked preferences in relation to the sectors as well	20
2.2. The microeconomic effectiveness of protection	22
2.2.1. Which contribution is made to performances in terms of innovation?	23
2.2.2. Which links are there between patents and R&D profitability?	24
2.2.3. What is the value of patents? Between cost-benefit calculations and lottery logic	26
 Chapter 3. How Effective is the System in Terms of Social Welfare?	
The Dimensions of the Problem	29
3.1. Intellectual property rights as a second-best solution	29
3.1.1. A blend of dynamic efficiency and static inefficiency	30
3.1.2. A right to try to exclude rather than a guarantee of monopoly	30
3.2. Looking for an effective patent	31
3.2.1. Which is the optimal term for patents and copyright?	32
3.2.2. Which is the optimal breadth of patents?	32
3.2.3. Which is the optimal height for patents? The issue of the patentability criteria	34
3.3. Several possibilities to best configure rights according to the general interest.	35
3.3.1. Patents: a disclosure requirement that favors the diffusion of knowledge	35
3.3.2. The role of filter played by courts and by opposition and reexamination proceedings.	36
3.3.3. Licensing and the interaction with competition policy	37
3.3.4. The regime of exceptions: the case of research exemption and fair use.	39
3.3.5. The cost involved in obtaining and maintaining patent rights	40
 Chapter 4. How Companies Use Intellectual Property	
4.1. Defensive strategy	45

4.2. Licensing strategy	47
4.3. Cooperative strategy	50
4.3.1. Intellectual property, between currency and a form of sharing	51
4.3.2. Patents as signaling tools, especially in relation to finance	54
4.4. Movement strategy	56
Chapter 5. What is the Contribution Made to Emerging Forms of Innovation?	61
5.1. The challenges of the digital world and the new forms of innovation.	61
5.1.1. The issues related to open-innovation practices	62
5.1.2. The requirements of innovation through reutilization and collective networked innovation	63
5.1.3. The digital revolution and the growing role of user-driven innovation and Big Data	63
5.1.4. Risks of mass counterfeiting linked to the development of 3D printing	65
5.2. The risk of adverse effects in the recent development of the patent system	66
5.2.1. Is an increasing number of patents stifling innovation in some sectors?	67
5.2.2. Problems encountered mostly by sectors based on incremental innovation	69
5.3. Two emblematic cases of considerable tension: biotechnologies and the software industry	70
5.3.1. Biotech: what kind of access to genetic resources and research tools?	70
5.3.2. The software industry: what kind of balance between copyright and patents?	73
5.3.3. What is the role of open-source software?	76
Chapter 6. The Main Trends of Intellectual Property Regimes	81
6.1. A reinforcement trend deriving mostly from America.	81
6.2. A trend which is also present in Europe and Japan.	83

6.3. Which multilateral framework should we consider, especially in relation to the needs of developing countries?	85
6.4. A reinforced copyright regime as well	88
Chapter 7. A System that is the Victim of its own Success or an Anomaly that should be Remedied?	91
7.1. The escalation of trademarks, industrial design rights, copyright, counterfeiting and piracy	91
7.2. A multiplication of patents of mixed quality and occasionally with vague outlines	93
7.3. Increased pressure on the judicial system	98
7.3.1. Patent-related disputes: frequency and costs that vary according to the sectors	99
7.3.2. The emergence of patent trolls	101
7.4. A new reform movement from the United States: the backlash?	106
7.4.1. Correcting the scope of patentability	107
7.4.2. Restoring the patent examination procedure and introducing a filter on copyright	109
7.4.3. Avoiding some excesses linked to disputes or blocking positions	111
Chapter 8. Overall Assessment and Conclusion	113
8.1. A possible lever for the countries' economic growth through the incentive to innovate.	114
8.1.1. Some historical lessons	114
8.1.2. A diagnosis that remains contrasted and not sufficiently substantiated	117
8.2. A key factor for technology transfer and the dissemination of knowledge.	118
8.2.1. Promoting technology transfer through transnational companies.	118
8.2.2. A key tool for the regulation of knowledge flows.	121
8.2.3. A key tool for the commercialisation of public research results	123
8.3. A joint evolution on a sectorial level as well	124
8.3.1. The case of semiconductors and software	125
8.3.2. Examples of past and present disruptive technologies	127
8.4. Status quo, reform or abolition?.	129
8.4.1. A net benefit or a net cost for the economy and society as a whole?.	129

8.4.2. Reforming rather than abolishing	134
8.4.3. The relation between innovation and the strength of rights: an inverted U-shape?	134
Bibliography	137
