<b>Preface</b> . . . . .	xi
<b>Acknowledgments</b> . . . . .	xiii
<b>Nomenclature</b> . . . . .	xv
<b>Abbreviations</b> . . . . .	xxi
<b>Introduction</b> . . . . .	xxv
<b>Chapter 1. Introduction and General Statements</b> . . . . .	1
1.1. Definition of the irrigation problem . . . . .	2
1.1.1. Conditions involved in reducing the efficiency . . . . .	3
1.1.2. Associated structural problems in canals . . . . .	11
1.2. Evaluating irrigation efficiency. . . . .	12
1.3. Diagnosis and prognosis of the irrigation problem . . . . .	13
1.4. Objectives . . . . .	15
<b>Chapter 2. State of the Art of Canal Control Algorithms</b> . . . . .	17
2.1. Introduction . . . . .	17
2.2. Considered variables . . . . .	18
2.2.1. Controlled variables . . . . .	19
2.2.2. Measured variables . . . . .	26
2.2.3. Control action variables . . . . .	26
2.3. Logic of control . . . . .	27
2.3.1. Open-loop control. . . . .	27
2.3.2. Closed-loop control. . . . .	27

2.4. Methods of control system design . . . . .	29
2.4.1. Controller design: definition of inputs/outputs . . . . .	29
2.4.2. Monovariate methods . . . . .	30
2.4.3. Multivariate methods . . . . .	31
2.5. Field implementation . . . . .	32
<b>Chapter 3. Characterization of a Predictive Control Scheme . . . . .</b>	<b>35</b>
3.1. Introduction . . . . .	36
3.2. Computer model . . . . .	36
3.2.1. Linear model . . . . .	38
3.2.2. Nonlinear model . . . . .	41
3.3. Optimization problem . . . . .	43
3.3.1. Introduction . . . . .	43
3.3.2. Desired output vector . . . . .	46
3.3.3. Objective function . . . . .	47
<b>Chapter 4. Overall Control Diagram . . . . .</b>	<b>51</b>
4.1. Introduction . . . . .	51
4.2. Structure Diagram . . . . .	51
4.3. Conclusion . . . . .	57
<b>Chapter 5. Canal Survey Information: CSI Algorithm . . . . .</b>	<b>61</b>
5.1. Introduction . . . . .	62
5.2. Problem statement . . . . .	65
5.2.1. Definition of the optimization problem . . . . .	67
5.2.2. Optimization problem: objective function . . . . .	70
5.2.3. Optimization problem statement . . . . .	71
5.2.4. Conclusions of the problem statement . . . . .	71
5.2.5. System output/input variables of CSI . . . . .	72
5.3. Estimation algorithm from unconstrained optimization . . . . .	73
5.3.1. First-order and second-order conditions . . . . .	73
5.3.2. Implemented algorithm . . . . .	76
5.4. Conclusion . . . . .	79
5.5. Appendix 1 . . . . .	81
5.5.1. Free-surface flow equations . . . . .	81
5.5.2. Discretization of the characteristic equations . . . . .	85
5.5.3. Application to a structured grid . . . . .	88
5.5.4. Control structures . . . . .	92
5.5.5. Discretization of the checkpoint equations . . . . .	94
5.5.6. Pump flow trajectories . . . . .	96
5.5.7. Boundary conditions . . . . .	98

---

5.5.8. Hydraulic influence of a pump flow trajectory parameter on the state vector . . . . .	101
5.5.9. Compilation of the hydraulic influence matrix . . . . .	105
5.6. Appendix 2 . . . . .	109
5.6.1. Unconstrained optimized problem (Levenberg–Marquardt) . . . . .	109
<b>Chapter 6. CSI Performance: Numerical Examples</b> . . . . .	<b>113</b>
6.1. Introduction . . . . .	114
6.2. Geometry . . . . .	115
6.3. Discretization of a problem . . . . .	115
6.4. Boundary and initial conditions . . . . .	115
6.5. Test cases analyzed . . . . .	117
6.5.1. First example: flow disturbance . . . . .	118
6.5.2. Second example: small disturbance . . . . .	119
6.5.3. Third example: flow disturbance not localized at a control structure . . . . .	121
6.6. Associated errors due to the loss of water-level measurements . . . . .	127
6.7. Associated errors due to measurement errors in depth gages . . . . .	130
6.8. Hydrodynamic canal state . . . . .	135
6.9. Conclusion . . . . .	139
6.10. Appendix . . . . .	140
<b>Chapter 7. CSI Tests on the Experimental Canal PAC-UPC</b> . . . . .	<b>155</b>
7.1. General description . . . . .	155
7.1.1. Gates . . . . .	162
7.1.2. Weirs . . . . .	162
7.1.3. Water-level sensors . . . . .	163
7.2. Initial and boundary conditions . . . . .	163
7.3. Discretization of a problem . . . . .	166
7.4. Scenario . . . . .	166
7.5. Test results . . . . .	170
7.6. Sensitivity of the extracted flow to the Manning coefficient . . . . .	172
7.7. Conclusion . . . . .	173
<b>Chapter 8. Online Predictive Control: GoRoSoBo</b> . . . . .	<b>175</b>
8.1. Introduction . . . . .	176
8.2. Problem statement . . . . .	183
8.2.1. Definition of the optimization problem . . . . .	183
8.2.2. Control problem: objective function . . . . .	185
8.2.3. Predictive control . . . . .	187
8.2.4. Input/output variables of a controlled system . . . . .	188
8.2.5. Analysis of the Hydraulic Influence Matrix: HIM(U) . . . . .	189

8.3. Algorithm controller for unconstrained optimization . . . . .	191
8.3.1. First-order and second-order conditions . . . . .	191
8.3.2. Optimized problem theory . . . . .	192
8.3.3. Implemented algorithm . . . . .	192
8.3.4. Analysis of the unconstrained optimization problem . . . . .	193
8.4. Algorithm controller from constrained optimization . . . . .	196
8.4.1. Optimized problem theory . . . . .	199
8.4.2. Implemented algorithm . . . . .	200
8.4.3. Analysis of the future state computation . . . . .	201
8.4.4. Conclusions of the constrained optimization problem . . . . .	205
8.5. Appendix I . . . . .	206
8.5.1. Unconstrained optimized problem (Levenberg–Manquardt) . . . . .	206
8.6. Appendix II . . . . .	209
8.6.1. First-order condition . . . . .	209
8.6.2. The second-order conditions . . . . .	211
8.7. Appendix III . . . . .	212
8.7.1. Constraint qualification . . . . .	212
8.8. Appendix IV . . . . .	214
8.8.1. Lagrange–Newton method . . . . .	214
8.8.2. Active Set method . . . . .	216
<b>Chapter 9. GoRoSoBo Application: Canal with Only One Pool . . . . .</b>	<b>219</b>
9.1. Introduction . . . . .	219
9.2. Canal geometry . . . . .	220
9.3. Canal features . . . . .	220
9.4. Problem setting . . . . .	222
9.5. Target value . . . . .	224
9.6. Constraints and trajectories . . . . .	225
9.7. Test results . . . . .	225
9.8. Conclusion . . . . .	244
<b>Chapter 10. ASCE Test Cases . . . . .</b>	<b>245</b>
10.1. Canal features . . . . .	246
10.1.1. Maricopa Stanfield canal . . . . .	246
10.1.2. Corning canal . . . . .	250
10.2. Target values . . . . .	253
10.2.1. Maricopa Stanfield . . . . .	253
10.2.2. Corning canal . . . . .	254
10.3. Unscheduled flow changes . . . . .	254
10.3.1. Maricopa Stanfield . . . . .	255
10.3.2. Corning canal . . . . .	257

---

10.4. Constraints and trajectories . . . . .	258
10.5. Test results . . . . .	259
10.5.1. Test case 1-1 (Maricopa Stanfield) . . . . .	260
10.5.2. Test case 1-2 (Maricopa Stanfield) . . . . .	264
10.5.3. Test case 2-1 (Corning canal) . . . . .	269
10.5.4. Test case 2-2 (Corning canal) . . . . .	273
10.6. Performance indicators . . . . .	277
10.6.1. Maximum absolute error (MAE) . . . . .	278
10.6.2. Integral of absolute magnitude of error (IAE) . . . . .	278
10.6.3. Steady-state error (StE) . . . . .	278
10.6.4. Integrated absolute discharge change (IAQ) . . . . .	278
10.7. Comparison between controllers . . . . .	279
10.7.1. Test case 1-1 (Maricopa Stanfield) . . . . .	279
10.7.2. Test case 1-2 (Maricopa Stanfield) . . . . .	281
10.7.3. Test case 2-1 (Corning canal) . . . . .	281
10.7.4. Test case 2-2 (Corning canal) . . . . .	282
10.8. Conclusion . . . . .	283
<b>Conclusion and Future Work</b> . . . . .	287
<b>Bibliography</b> . . . . .	291
<b>Index</b> . . . . .	303
