Preface	ix
Chapter 1. History of the <i>Predator–Prey Model</i>	1
1.1. The logistic model	1
1.1.1. Notations, terminology	2
1.1.2. Growth with feedback and resource	4
1.1.3. Another interpretation of the logistic equation: the interference between individuals	9
1.1.4. (r, α) -model or (r, K) -model?	11
1.1.5. Historical notes and criticisms	14
1.2. The Lotka–Volterra <i>predator–prey model</i>	14
1.2.1. The model	14
1.2.2. Model analysis	15
1.2.3. Phase portrait and simulations	19
1.2.4. Historical notes and criticisms	20
1.3. The Gause model	24
1.3.1. The model	24
1.3.2. Model simulations	26
1.3.3. Historical notes and criticisms	29
1.4. The Rosenzweig–MacArthur model	31
1.4.1. The model	31
1.4.2. Analysis and simulations	32
1.4.3. Historical remarks and criticisms	35
1.5. The “ratio-dependent” model	38
1.5.1. Model analysis and simulations	38

1.5.2. Historical notes and criticisms	41
1.6. Conclusion	42
Chapter 2. The Consumer–Resource Model	43
2.1. The general model	43
2.1.1. General assumptions on the model	44
2.1.2. Properties	45
2.2. The “resource-dependent” model	47
2.2.1. Development of the Rosenzweig–MacArthur model	47
2.2.2. Analysis of the RMA model	52
2.2.3. Variants of the RMA model	59
2.3. The Arditi–Ginzburg “ratio-dependent” model	65
2.3.1. Development of the “RC-dependent” and “ratio-dependent” model	65
2.3.2. Analysis of RC and ratio-dependent models	68
2.3.3. Simulations of the ratio-dependent model	77
2.4. Historical and bibliographical remarks	83
Chapter 3. Competition	87
3.1. Introduction	87
3.2. The two-species competition Volterra model	89
3.2.1. Population 2 wins the competition	89
3.2.2. Population 1 wins the competition	90
3.2.3. Coexistence of both populations	91
3.2.4. Conditional exclusion	92
3.2.5. Interference	93
3.3. Competition and the Rosenzweig–MacArthur model	93
3.3.1. Equilibria of the competition RMA model	94
3.3.2. The exclusion theorem at equilibrium	96
3.3.3. The exclusion theorem and the Volterra model	99
3.4. Competition with RC and ratio-dependent models	100
3.4.1. Characteristics at equilibrium	100
3.4.2. Growth thresholds and equilibria of model [3.10]	102
3.4.3. Stability of coexistence equilibria	106
3.4.4. Criticism of RC and ratio-dependent competition models	109
3.4.5. Simulations	110

3.5. Coexistence through periodic solutions 119
 3.5.1. Self-oscillating pair (x, y) 119
 3.5.2. Adding a competitor 121
 3.6. Historical and bibliographical remarks 123

**Chapter 4. “Demographic Noise” and
 “Atto-fox” Problem** 125

4.1. The “atto-fox” problem 125
 4.2. The RMA model with small yield 126
 4.2.1. Notations, terminology 128
 4.2.2. The “constrained system” 130
 4.2.3. Phase portrait of [4.3] when Π_δ crosses the parabola “far
 away” from the peak 132
 4.2.4. Phase portrait when Π_δ crosses the parabola “close” to the
 peak 139
 4.3. The RC-dependent model with small yield 148
 4.4. The persistence problem in population dynamics 151
 4.4.1. Demographic noise and the atto-fox problem 153
 4.4.2. Sensibility of atto-fox phenomena 159
 4.4.3. About the very unlikely nature of canard values 163
 4.5. Historical and bibliographical remarks 165

**Chapter 5. Mathematical Supplement:
 “Canards” of Planar Systems** 169

5.1. Planar slow–fast vector fields 169
 5.1.1. Concerning *orders of magnitude* 169
 5.1.2. First approximation: the constrained system 172
 5.1.3. Constrained trajectories 173
 5.1.4. Constrained trajectories and “real trajectories” 175
 5.2. Bifurcation of planar vector fields 183
 5.2.1. System equivalence 184
 5.2.2. Andronov–Hopf bifurcation 186
 5.3. Bifurcation of a slow–fast vector field 190
 5.3.1. A surprising Andronov–Hopf bifurcation 190
 5.3.2. The particular case: $p=0$ 193
 5.3.3. Some terminology 201
 5.3.4. Back to the initial model 202
 5.3.5. The general case $p \neq 0$ 204

5.4. Bifurcation delay	212
5.4.1. Another surprising simulation	212
5.4.2. One more surprise	216
5.4.3. The Shiskova–Neishtadt theorem	219
5.5. Historical and bibliographical remarks	220
Appendices	225
Appendix 1. Differential Equations and Vector Fields	227
Appendix 2. Planar Vector Field	235
Appendix 3. Discontinuous Planar Vector Fields	241
Bibliography	253
Index	259
