Preface	xvii
Konstantinos N. ZAFEIRIS, Yiannis DIMOTIKALIS, Christos H. SKIADAS, Alex KARAGRIGORIOU and Christiana KARAGRIGORIOU-VONTA	
Part 1	1
Chapter 1. Performance of Evaluation of Diagnosis of Various Thyroid Diseases Using Machine Learning Techniques	3
Burcu Bektas GÜNEŞ, Evren BURSUK and Rüya ŞAMLI	
1.1. Introduction	3
1.2. Data understanding	5
1.3. Modeling	6
1.4. Findings	8
1.5. Conclusion	10
1.6. References	10
Chapter 2. Exploring Chronic Diseases' Spatial Patterns: Thyroid Cancer in Sicilian Volcanic Areas	13
Francesca BITONTI and Angelo MAZZA	
2.1. Introduction	14
2.2. Epidemiological data and territory	16
2.3. Methodology	18
2.3.1. Spatial inhomogeneity and spatial dependence.	18
2.3.2. Standardized incidence ratio (SIR)	19
2.3.3. Local Moran's I statistic	21
2.4. Spatial distribution of TC in eastern Sicily	22
2.4.1. SIR geographical variation.	22

2.4.2. Estimate of the spatial attraction	24
2.5. Conclusion	25
2.6. References	26

Chapter 3. Analysis of Blockchain-based Databases in Web Applications 31

Orhun Ceng BOZO and Rüya ŞAMLI

3.1. Introduction	31
3.2. Background.	32
3.2.1. Blockchain.	32
3.2.2. Blockchain types	32
3.2.3. Blockchain-based web applications	33
3.2.4. Blockchain consensus algorithms	33
3.2.5. Other consensus algorithms	34
3.3. Analysis stack	34
3.3.1. Art Shop web application	34
3.3.2. SQL-based application	34
3.3.3. NoSQL-based application	35
3.3.4. Blockchain-based application	35
3.4. Analysis	36
3.4.1. Adding records	36
3.4.2. Query.	38
3.4.3. Functionality	39
3.4.4. Security	39
3.5. Conclusion	41
3.6. References	41

Chapter 4. Optimization and Asymptotic Analysis of Insurance Models 43

Ekaterina BULINSKAYA

4.1. Introduction	43
4.2. Discrete-time model with reinsurance and bank loans	44
4.2.1. Model description.	44
4.2.2. Optimization problem	45
4.2.3. Model stability	46
4.3. Continuous-time insurance model with dividends	48
4.3.1. Model description.	48
4.3.2. Optimal barrier strategy	49
4.3.3. Special form of claim distribution	50
4.3.4. Numerical analysis	54

4.4. Conclusion and further research directions	55
4.5. References	56

Chapter 5. Statistical Analysis of Traffic Volume in the 25 de Abril Bridge 57

Frederico CAEIRO, Ayana MATEUS and Conceicao VEIGA de ALMEIDA

5.1. Introduction	57
5.2. Data	58
5.3. Methodology	60
5.3.1. Main limit results	60
5.3.2. Block maxima method	61
5.3.3. Largest order statistics method.	62
5.3.4. Estimation of other tail parameters	63
5.4. Results and conclusion	63
5.5. Acknowledgements	65
5.6. References	65

Chapter 6. Predicting the Risk of Gestational Diabetes Mellitus through Nearest Neighbor Classification 67

Louisa TESTA, Mark A. CARUANA, Maria KONTORINAKI and Charles SAVONA-VENTURA

6.1. Introduction	67
6.2. Nearest neighbor methods	69
6.2.1. Background of the NN methods	69
6.2.2. The k -nearest neighbors method	70
6.2.3. The fixed-radius NN method.	70
6.2.4. The kernel-NN method	71
6.2.5. Algorithms of the three considered NN methods.	72
6.2.6. Parameter and distance metric selection	74
6.3. Experimental results.	75
6.3.1. Dataset description	75
6.3.2. Variable selection and data splitting.	75
6.3.3. Results	76
6.3.4. A discussion and comparison of results.	78
6.4. Conclusion	79
6.5. References	79

Chapter 7. Political Trust in National Institutions: The Significance of Items' Level of Measurement in the Validation of Constructs	81
Anastasia CHARALAMPI, Eva TSOUPAROPOULOU, Joanna TSIGANOU and Catherine MICHALOPOULOU	
7.1. Introduction	82
7.2. Methods	83
7.2.1. Participants	83
7.2.2. Instrument	84
7.2.3. Statistical analyses	85
7.3. Results	87
7.3.1. EFA results	87
7.3.2. CFA results	88
7.3.3. Scale construction and assessment	91
7.4. Conclusion	94
7.5. Funding	95
7.6. References	95
Chapter 8. The State of the Art in Flexible Regression Models for Univariate Bounded Responses	99
Agnese Maria DI BRISCO, Roberto ASCARI, Sonia MIGLIORATI and Andrea ONGARO	
8.1. Introduction	100
8.2. Regression model for bounded responses	101
8.2.1. Augmentation	102
8.2.2. Main distributions on the bounded support	103
8.2.3. Inference and fit.	106
8.3. Case studies	107
8.3.1. Stress data	107
8.3.2. Reading data.	110
8.4. References	112
Chapter 9. Simulation Studies for a Special Mixture Regression Model with Multivariate Responses on the Simplex	115
Agnese Maria DI BRISCO, Roberto ASCARI, Sonia MIGLIORATI and Andrea ONGARO	
9.1. Introduction	115
9.2. Dirichlet and EFD distributions	116
9.3. Dirichlet and EFD regression models	118
9.3.1. Inference and fit.	118
9.4. Simulation studies	119
9.4.1. Comments	124
9.5. References	131

Part 2	133
Chapter 10. Numerical Studies of Implied Volatility Expansions Under the Gatheral Model	135
Marko DIMITROV, Mohammed ALBUHAYRI, Ying NI and Anatoliy MALYARENKO	
10.1. Introduction	135
10.2. Asymptotic expansions of implied volatility	137
10.3. Performance of the asymptotic expansions	139
10.4. Calibration using the asymptotic expansions	141
10.4.1. A partial calibration procedure	142
10.4.2. Calibration to synthetic and market data	143
10.5. Conclusion and future work	147
10.6. References	148
Chapter 11. Performance Persistence of Polish Mutual Funds: Mobility Measures	149
Dariusz FILIP	
11.1. Introduction	149
11.2. Literature review	150
11.3. Dataset and empirical design	153
11.4. Empirical results	155
11.5. Monthly perspective	156
11.6. Quarterly perspective	157
11.7. Yearly perspective	158
11.8. Conclusion	159
11.9. References	159
Chapter 12. Invariant Description for a Batch Version of the UCB Strategy with Unknown Control Horizon	163
Sergey GARBAR	
12.1. Introduction	163
12.2. UCB strategy	165
12.3. Batch version of the strategy	165
12.4. Invariant description with a unit control horizon	166
12.5. Simulation results	169
12.6. Conclusion	170
12.7. Affiliations	171
12.8. References	171

Chapter 13. A New Non-monotonic Link Function for Beta Regressions	173
Gloria GHENO	
13.1. Introduction	174
13.2. Model	175
13.3. Estimation	178
13.4. Comparison	179
13.5. Conclusion	184
13.6. References	184
Chapter 14. A Method of Big Data Collection and Normalization for Electronic Engineering Applications	187
Naveenbalaji GOWTHAMAN and Viranjay M. SRIVASTAVA	
14.1. Introduction	187
14.2. Machine learning (ML) in electronic engineering	189
14.2.1. Data acquisition	190
14.2.2. Accessing the data repositories	191
14.2.3. Data storage and management	192
14.3. Electronic engineering applications – data science	193
14.4. Conclusion and future work	195
14.5. References	195
Chapter 15. Stochastic Runge–Kutta Solvers Based on Markov Jump Processes and Applications to Non-autonomous Systems of Differential Equations	199
Flavius GUIAŞ	
15.1. Introduction	199
15.2. Description of the method	201
15.2.1. The direct simulation method	201
15.2.2. Picard iterations	201
15.2.3. Runge–Kutta steps	202
15.3. Numerical examples	203
15.3.1. The Lorenz system	203
15.3.2. A combustion model	204
15.4. Conclusion	206
15.5. References	206

Chapter 16. Interpreting a Topological Measure of Complexity for Decision Boundaries	207
Alan HYLTON, Ian LIM, Michael MOY and Robert SHORT	
16.1. Introduction	207
16.2. Persistent homology	209
16.3. Methodology	213
16.3.1. Neural networks and binary classification.	213
16.3.2. Persistent homology of a decision boundary	213
16.3.3. Procedure.	214
16.4. Experiments and results	215
16.4.1. Three-dimensional binary classification.	215
16.4.2. Data divided by a hyperplane.	217
16.5. Conclusion and discussion.	219
16.6. References	220
Chapter 17. The Minimum Renyi’s Pseudodistance Estimators for Generalized Linear Models	223
María JAENADA and Leandro PARDO	
17.1. Introduction	223
17.2. The minimum RP estimators for the GLM model: asymptotic distribution	225
17.3. Example: Poisson regression model	230
17.3.1. Real data application	230
17.4. Conclusion	232
17.5. Acknowledgments	232
17.6. Appendix.	232
17.6.1. Proof of Theorem 1	232
17.7. References	234
Chapter 18. Data Analysis based on Entropies and Measures of Divergence	237
Christos MESELIDIS, Alex KARAGRIGORIOU and Takis PAPAIOANNOU	
18.1. Introduction	237
18.2. Divergence measures.	238
18.3. Tests of fit based on Φ -divergence measures	241
18.4. Simulations	246
18.5. References	254

Part 3	259
Chapter 19. Geographically Weighted Regression for Official Land Prices and their Temporal Variation in Tokyo	261
Yuta KANNO and Takayuki SHIOHAMA	
19.1. Introduction	261
19.2. Models and methodology	263
19.3. Data analysis	266
19.3.1. Data	266
19.3.2. Results	268
19.4. Conclusion	272
19.5. Acknowledgments	273
19.6. References	273
Chapter 20. Software Cost Estimation Using Machine Learning Algorithms	275
Sukran EBREN KARA and Rüya ŞAMLI	
20.1. Introduction	275
20.2. Methodology	276
20.2.1. Dataset	276
20.2.2. Model	277
20.2.3. Evaluating the performance of the model	278
20.3. Results and discussion	279
20.4. Conclusion	282
20.5. References	283
Chapter 21. Monte Carlo Accuracy Evaluation of Laser Cutting Machine	285
Samuel KOSOLAPOV	
21.1. Introduction	286
21.2. Mathematical model of a pintograph	286
21.3. Monte Carlo simulator	291
21.4. Simulation results	294
21.5. Conclusion	295
21.6. Acknowledgments	295
21.7. References	295

Chapter 22. Using Parameters of Piecewise Approximation by Exponents for Epidemiological Time Series Data Analysis	297
Samuel KOSOLAPOV	
22.1. Introduction	298
22.2. Deriving equations for moving exponent parameters	298
22.3. Validation of derived equations by using synthetic data	300
22.4. Using derived equations to analyze real-life Covid-19 data	302
22.5. Conclusion	305
22.6. References	306
Chapter 23. The Correlation Between Oxygen Consumption and Excretion of Carbon Dioxide in the Human Respiratory Cycle	307
Anatoly KOVALENKO, Konstantin LEBEDINSKII and Verangelina MOLOSHNEVA	
23.1. Introduction	308
23.2. Respiratory function physiology: ventilation–perfusion ratio	309
23.3. The basic principle of operation of artificial lung ventilation devices: patient monitoring parameters	310
23.4. The algorithm for monitoring the carbon emissions and oxygen consumption	312
23.5. Results	314
23.6. Conclusion	316
23.7. References	316
Part 4	317
Chapter 24. Approximate Bayesian Inference Using the Mean-Field Distribution	319
Antonin DELLA NOCE and Paul-Henry COURNÈDE	
24.1. Introduction	319
24.2. Inference problem in a symmetric population system	321
24.2.1. Example of a symmetric system describing plant competition	321
24.2.2. Inference problem of the Schneider system, in a more general setting	323
24.3. Properties of the mean-field distribution	325
24.4. Mean-field approximated inference	327
24.4.1. Case of systems admitting a mean-field limit	327
24.5. Conclusion	330
24.6. References	330

Chapter 25. Pricing Financial Derivatives in the Hull–White Model Using Cubature Methods on Wiener Space 333

Hossein NOHROUZIAN, Anatoliy MALYARENKO and Ying NI

25.1. Introduction and outline	333
25.2. Cubature formulae on Wiener space	335
25.2.1. A simple example of classical Monte Carlo estimates	335
25.2.2. Modern Monte Carlo estimates via cubature method.	336
25.2.3. An application in the Black–Scholes SDE	338
25.2.4. Trajectories of the cubature formula of degree 5 on Wiener space	339
25.2.5. Trajectories of price process given in equation [25.7]	340
25.2.6. An application on path-dependent derivatives	341
25.2.7. Trinomial tree (model) via cubature formulae of degree 5.	342
25.3. Interest-rate models and Hull–White one-factor model.	343
25.3.1. Equilibrium models	343
25.3.2. No-arbitrage models.	344
25.3.3. Forward rate models.	345
25.3.4. Hull–White one-factor model	345
25.3.5. Discretization of the Hull–White model via Euler scheme	346
25.3.6. Hull–White model for bond prices.	346
25.4. The Hull–White model via cubature method.	349
25.4.1. Simulating SDE [25.15] and ODE [25.24]	350
25.4.2. The Hull–White interest-rate tree via iterated cubature formulae: some examples	353
25.5. Discussion and future works	354
25.6. References	355

Chapter 26. Differences in the Structure of Infectious Morbidity of the Population during the First and Second Half of 2020 in St. Petersburg 359

Vasilii OREL, Olga NOSYREVA, Tatiana BULDAKOVA, Natalya GUREVA, Viktoria SMIRNOVA, Andrey KIM and Lubov SHARAFUTDINOVA

26.1. Introduction.	360
26.2. Materials and methods.	360
26.2.1. Characteristics of the territory of the district	360
26.2.2. Demographic characteristics of the area.	360
26.2.3. Characteristics of the district medical service.	361
26.2.4. The procedure for collecting primary information on cases of diseases of the population with a new coronavirus infection.	361
26.3. Results of the analysis of the incidence of acute respiratory viral infectious diseases, new coronavirus infection Covid-19 and community-acquired pneumonia.	362

26.4. Conclusion	367
26.5. References	368
Chapter 27. High Speed and Secured Network Connectivity for Higher Education Institutions Using Software Defined Networks	371
Lincoln S. PETER and Viranjay M. SRIVASTAVA	
27.1. Introduction	372
27.2. Existing model review	373
27.3. Selection of a suitable model	374
27.4. Conclusion and future recommendations	376
27.5. References	376
Chapter 28. Reliability of a Double Redundant System Under the Full Repair Scenario	379
Vladimir RYKOV and Nika IVANOVA	
28.1. Introduction	379
28.2. Problem statement, assumptions and notations	381
28.3. Reliability function	384
28.4. Time-dependent system state probabilities	386
28.4.1. General representation of t.d.s.p.s	386
28.4.2. T.d.s.p.s in a separate regeneration period	387
28.5. Steady-state probabilities	392
28.6. Conclusion	393
28.7. References	393
Chapter 29. Predicting Changes in Depression Levels Following the European Economic Downturn of 2008	395
Eleni SERAFETINIDOU and Georgia VERROPOULOU	
29.1. Introduction	396
29.1.1. Aims of the study	398
29.2. Data and methods	398
29.2.1. Sample	398
29.2.2. Measures	398
29.3. Results	400
29.3.1. Descriptive findings	400
29.3.2. Non-respondents compared to respondents at baseline (wave 2)	403
29.3.3. Descriptive findings for respondents – analysis by gender	405
29.3.4. Findings regarding decreasing depression levels – analysis for the total sample and by gender	408
29.3.5. Findings regarding increasing depression levels – analysis for the total sample and by gender	410

29.4. Discussion	413
29.5. Conclusion	414
29.6. Acknowledgments	415
29.7. References	415
List of Authors	419
Index	425
Summary of Volume 2	429
