Preface	ix
Chapter 1. Introduction to Statically Indeterminate Structural Analysis	1
1.1. Introduction.	1
1.2. External static indeterminacy	2
1.3. Internal static indeterminacy.	5
1.3.1. Truss structures	5
1.3.2. Beam and frame structures	7
1.3.3. Crossbeams	9
1.4. Kinematic static indeterminacy	11
1.5. Statically indeterminate structural analysis methods.	15
1.6. Superposition principle	16
1.7. Advantages and disadvantages of statically indeterminate structures	17
1.7.1. Advantages of statically indeterminate structures	18
1.7.2. Disadvantages of statically indeterminate structures	19
1.8. Conclusion	21
1.9. Problems	21
Chapter 2. Method of Three Moments	25
2.1. Simple beams.	25
2.2. Continuous beam	37
2.3. Applying Clapeyron's theorem	43
2.3.1. Beam with two spans.	44
2.3.2. Beam with support settlements	46
2.3.3. Beam with cantilever.	49
2.4. Focus method.	51

2.4.1. Left focus method	52
2.4.2. Right focus method.	54
2.4.3. Focus method with loaded bays	57
2.5. Conclusion	63
2.6. Problems	63
Chapter 3. Method of Forces	67
3.1. Beam with one degree of static indeterminacy	67
3.2. Beam with many degrees of static indeterminacy	72
3.3. Continuous beam with support settlements	77
3.4. Analysis of a beam with two degrees of static indeterminacy	80
3.5. Analysis of a beam subjected to a moment	84
3.6. Analysis of frames.	87
3.6.1. Frame with two degrees of static indeterminacy.	87
3.6.2. Frame with cantilever	93
3.6.3. Frame with many degrees of static indeterminacy	100
3.6.4. Frame with oblique bars.	106
3.7. Analysis of truss	113
3.7.1. Internally statically indeterminate truss	114
3.7.2. Externally statically indeterminate truss	121
3.7.3. Internally and externally statically indeterminate truss	125
3.8. Conclusion	129
3.9. Problems	130
Chapter 4. Slope-Deflection Method	137
4.1. Relationship between deflections and transmitted moments	137
4.2. Fixed-end moments	141
4.2.1. Bi-hinged beam	141
4.2.2. Simply supported beam	142
4.3 Rigidity factor and transmission coefficient	142
4.4. Beam analysis	148
4.4.1. Single span beam	148
4.4.2. Continuous beam	150
4.4.3. Continuous beam with cantilever	153
4.4.4. Beam with support settlements	156
4.4.5. Beam subjected to a moment	160
4.5. Analysis of frames.	164
4.5.1. Frame without sidesway.	164
4.5.2. Frames with sidesway	182
4.6. Conclusion	208
4.7. Problems	208

Chapter 5. Moment-Distribution Method	213
5.1. Hypotheses of the moment-distribution method	213
5.2. Presentation of the moment-distribution method	214
5.2.1. Distribution of a moment around a rigid joint	214
5.2.2. Distribution procedure	216
5.3. Continuous beam analysis	219
5.3.1. Beam with support settlement	220
5.3.2. Beam with cantilever	224
5.3.3. Beam subjected to a moment	227
5.4. Analysis of frames	229
5.4.1. Frame without sidesway	229
5.4.2. Frame with sidesway	234
5.5. Conclusion	264
5.6. Problems	265
Chapter 6. Influence Lines of Statically Indeterminate Structures	271
6.1. Introduction	271
6.2. Influence lines of beams	272
6.2.1. Beam with one degree of static indeterminacy	272
6.2.2. Beam with two degrees of static indeterminacy	279
6.3. Influence lines of frames	286
6.4. Influence lines of trusses	290
6.4.1. Internally statically indeterminate truss	292
6.4.2. Externally statically indeterminate truss	300
6.5. Conclusion	304
6.6. Problems	304
Chapter 7. Statically Indeterminate Arch Analysis	309
7.1. Introduction	309
7.2. Classification of arches	310
7.3. Semicircular arch under concentrated load	311
7.4. Parabolic arch under concentrated load	321
7.5. Semicircular arch under distributed load	326
7.6. Parabolic arch under distributed load	331
7.7. Semicircular arch fixed under concentrated load	337
7.8. Statically indeterminate tied arch	345
7.9. Arch with many degrees of freedom	350
7.10. Influence lines of statically indeterminate arch	356

7.10.1. Influence lines of bi-hinged arch	356
7.10.2. Influence line of fixed-end arch.	360
7.11. Conclusion	364
7.12. Problems.	365
Appendix	371
Bibliography	375
Index	379
