Preface	xi
Part 1. Experiments, Models, Simulations	1
Chapter 1. Principles of Modeling	3
1.1. Experiments, models and simulations	3
1.2. Principles of modeling	12
1.3. Modeling vs. conceptualization	17
Chapter 2. Modeling and Simulation	23
2.1. Classical prediction of the serial position curve	23
2.2. Alternative explanation based on the interference phenomenon	24
2.3. Going further	40
Chapter 3. Adjustment of the Model to the Data	41
3.1. Categorization by exemplars.	41
3.2. Categorization by exemplar, with MATLAB® calculations.	46
3.3. Adjustment functions (RMSE and likelihood)	52
3.4. From adjustment to model selection	62
Chapter 4. Introduction to Programming in MATLAB®	65
4.1. Programming basics: getting started	65
4.1.1. Program styles.	65
4.1.2. Length of programs.	65
4.1.3. Emergency stop, stop a program from running	66

4.1.4. Initiation	66
4.1.5. Help	67
4.1.6. Variable reset and screen reset	67
4.1.7. Constants	68
4.1.8. Formats	68
4.2. Matrices	69
4.2.1. Sum and randn commands	71
4.2.2. Manipulating matrices	72
4.3. Basic functions	76
4.3.1. Find function	76
4.3.2. Size and length functions	77
4.3.3. Random numbers distributed randomly: rand function	78
4.3.4. Normally distributed random numbers: randn function	79
4.4. Comparison tests	80
4.5. Logical operators	81
4.6. Text or character strings	81
4.6.1. Character strings OR character matrices	82
4.7. Cells and structures	84
4.8. Control structures	85
4.9. Nested loops	85
4.10. Create functions	89
4.11. Summary	92
4.12. Programming tips in MATLAB®	93
Part 2. Experimentation	97
Chapter 5. Principles of Experimentation Organization and Experimental Reasoning	99
5.1. Experimental effect	99
5.2. Generalities	100
5.3. Participants	102
5.4. Location and conditions	104
5.5. Informed consent	104
5.6. Introductory reminder regarding the terminology of experimental design	105
5.7. Group denomination	109
5.8. Order effects, and rank effects in repeated measures	109
5.9. Going further: order and rank effects in repeated measures	109

Chapter 6. Building Experimental Conditions from Random Draws or Permutations	113
6.1. Creation of experimental groups	113
6.2. Randomly counterbalanced series of zeros and ones	114
6.3. Random series of experimental trials	116
6.4. Draw of conditions or participants without replacement	118
6.5. Counterbalancing experimental conditions	118
6.6. Randomization of several word lists by subject	121
6.7. Choice and counterbalancing of experimental conditions	122
6.8. Creation of permuted item lists for each subject	124
6.9. Creation of exhaustive lists and random draws	127
Chapter 7. Creating Stimuli Digitally	131
7.1. Overlaying stimuli	131
7.2. Create and combine various stimuli	134
7.2.1. Ten large stimuli of increasing size using linspace	134
7.2.2. A single cube	137
7.2.3. Creating simple image stimuli, then varying colors of these stimuli	138
7.2.4. Generate color variations from existing images	145
7.2.5. Creating windows of stimuli to be loaded in other experimentation software	147
7.2.6. Moving stimuli	153
7.3. Resources	154
Chapter 8. Experimenting with Psychtoolbox (and Others)	157
8.1. Introduction: Psychtoolbox (Psychophysics toolbox) or E-Prime?	157
8.2. MATLAB® experiments with the GUI	158
8.3. MATLAB® experiments with Psychtoolbox	160
8.3.1. Pricing, compatibility and authors	160
8.3.2. Stopping a blocked program	160
8.3.3. Familiarization with Psychtoolbox	161
8.3.4. Measuring time	162
8.3.5. Taking information from the screen	162
8.3.6. Displaying a stimulus	163
8.3.7. Displaying text	164
8.3.8. Displaying a rectangle in full screen	165
8.3.9. A mini experiment: memorizing letter sequences	167
8.3.10. Another mini experiment: color wheel memory	174

8.4. E-Prime	178
8.4.1. E-Studio	178
8.4.2. General properties of the experiment	180
8.4.3. Toolbox.	181
8.4.4. E-Merge	185
8.4.5. E-DataAid	186
8.4.6. E-Recovery	187
8.4.7. E-Run.	187
8.4.8. Tips for E-Prime	188
8.4.9. Example of a switching task with E-Prime	188
Part 3. Analysis and Modeling	197
Chapter 9. Analyzing Data: Import, Transformation, Compilation, Restructuring, Aggregation and Use of Statisticstoolbox	199
9.1. Importing and transforming	199
9.2. Compiling data files.	206
9.3. Extracting digital information from a file that is not organized as a table	209
9.4. Import, combine and manipulate data in a table format	214
9.5. Restructuring and aggregating data in MATLAB®	218
9.6. Restructuring and aggregating data with Excel or SPSS	224
Chapter 10. Introduction to Bayesian Analysis.	235
10.1. Introduction	235
10.2. Conditional release.	237
10.3. Bayes' law.	238
10.4. Principle of Bayesian inference	239
10.5. Updating hypotheses.	245
10.6. Statistics: going past rejecting the null hypothesis	248
10.7. What alternative for an implausible null hypothesis?	250
10.8. More complex distributions for calculating whether toast lands more often on the buttered side.	254
10.9. Model selection.	260
10.9.1. Bayesian tests with JASP	261
10.10. Cognitive psychology	264
Chapter 11. Complex and Original Figures	267
11.1. Correlation matrix with original diagonal	267
11.2. Dispersion diagram with cohorts	269

11.3. Double Y axis graphs	271
11.4. Multiple juxtaposed figures	273
11.5. Adding text	278
References	281
Index	287
