INTRODUCTION	ix
CHAPTER 1. DEFINITION OF ALM IN THE BANKING AND INSURANCE AREAS	1
1.1. Introduction.	1
1.2. Brief history of ALM for banks and insurance companies	2
1.3. Missions of the ALM department.	3
1.3.1. Missions of the ALM department for banks	3
1.3.2. Missions of the ALM department for insurance companies	5
1.4. Conclusion	8
CHAPTER 2. RISKS STUDIED IN ALM.	9
2.1. Introduction.	9
2.2. Risks studied in a bank in the framework of Basel II and III.	9
2.2.1. Main risks for banks	9
2.2.2. From Basel I to Basel III	11
2.3. Stress tests	15
2.3.1. What is a stress test?	15
2.3.2. The stress tests of 2014	16
2.4. Risks studied in an insurance company in the framework of Solvency II	17
2.4.1. Solvency II in a nutshell.	17
2.4.2. Focus on the risks.	20
2.5. Commonalities and differences between banks and insurance companies' problems	25
2.5.1. Commonalities	25
2.5.2. Differences.	25
2.6. Conclusion	26

CHAPTER 3. DURATIONS (REVISITED) AND SCENARIOS FOR ALM.	27
3.1. Introduction.	27
3.2. Duration and convexity risk indicators.	28
3.3. Scenario on the cash amounts of the flow	32
3.4. Scenario on the time maturities of the flow	34
3.5. Matching asset and liability	36
3.6. Matching with flow scenarios	40
3.7. ALM with the yield curve	43
3.7.1. Yield curve.	43
3.7.2. ALM with the equivalent constant rate	44
3.8. Matching with two rates	46
3.9. Equity sensitivity	47
3.9.1. Presentation of the problem.	47
3.9.2. Formalization of the problem.	48
3.9.3. Time dynamic of asset and liability flows	49
3.9.4. Sensitivity of equities and VaR indicator.	51
3.9.5. Duration of equities	52
3.9.6. Special case of the aggregated balance sheet.	52
3.9.7. A VaR approach	54
3.10. ALM and management of the bank	58
3.10.1. Basic principles	58
3.10.2. ALM and shares	58
3.10.3. Stochastic duration	66
3.11. Duration of a portfolio	70
3.12. Conclusion	71
CHAPTER 4. BUILDING AND USE OF AN ALM INTERNAL MODEL IN INSURANCE COMPANIES	73
4.1. Introduction.	73
4.2. Asset model.	74
4.2.1. Equity portfolio	74
4.2.2. Bond portfolio.	76
4.2.3. Real estate	82
4.2.4. Central scenario and simulated scenarios.	83
4.3. Liability model.	84
4.3.1. Model points.	85
4.3.2. Mathematical reserves and annual policyholder benefits.	87
4.3.3. Annual policyholder benefits and crediting rate	87
4.3.4. Profit sharing	90
4.3.5. Policyholder demography and behavior.	91
4.3.6. Other reserves	94
4.3.7. Future new business	96

4.3.8. Fees and business costs	97
4.4. Structure of an ALM study	99
4.4.1. Determinist study	99
4.4.2. Stochastic study	103
4.5. Case study	105
4.5.1. Goal of the study	105
4.5.2. Business plan and other liability inputs	105
4.5.3. Central scenario and other asset inputs	106
4.5.4. Fee and cost hypotheses	107
4.5.5. Step-by-step model	107
4.5.6. The ALM study	109
4.6. Conclusion	114
CHAPTER 5. BUILDING AND USE OF ALM INTERNAL MODELS IN BANKS	115
5.1. Introduction	115
5.2. Case 1: Reduction of gaps	115
5.2.1. Basic numerical data	115
5.2.2. Basic ALM indicators	118
5.2.3. Scenario for loss reduction	119
5.3. Case 2: A stochastic internal model	121
5.3.1. Probability of bankruptcy	121
5.3.2. Presentation of the first model (Model I)	122
5.3.3. Presentation of the model with correlations (Model Ibis)	124
5.3.4. Presentation of the model with correlations and non-negative values for assets and liabilities (Model II)	126
5.3.5. Consequences for ALM	131
5.4. Calibration of the models	135
5.4.1. Historical method	135
5.4.2. Scenario generator	139
5.5. Example	139
5.5.1. Model Ibis	139
5.5.2. ALM II	142
5.6. Key points for building internal models	146
5.6.1. How to present an internal model?	146
5.6.2. Validation of the model	147
5.6.3. Partial and global internal models	147
5.7. Conclusion	148

CONCLUSION	149
