INTRODUCTION	vii
CHAPTER 1. BATTERIES AND SUPERCAPACITORS: SOME REMINDERS	1
1.1. Main evolution of batteries from the 1980s to now	1
1.2. Supercapacitors: recent developments	8
CHAPTER 2. ADVANCED LI-ION	11
2.1. Positive electrode materials for Li-ion technology	11
2.2. Negative electrode materials for Li-ion technology	14
2.3. The question of electrolytes for Li-ion technology	15
CHAPTER 3. CAPACITIVE STORAGE	17
3.1. Carbonated materials for capacitive storage	17
3.2. Pseudocapacitive materials	18
3.3. Electrolytes for supercapacitors	20
3.4. Hybrid systems and middle-term goals.	21
CHAPTER 4. NEW CHEMISTRIES	23
4.1. Li-air technology	24

4.2. Li-S technology	27
4.3. Na-ion technology	29
4.4. Redox-flow technology	32
4.5. All-solid state batteries	36
CHAPTER 5. ECO-COMPATIBLE STORAGE	41
5.1. Ionothermal synthesis	42
5.2. Bioinspired synthesis/approach	42
5.3. Organic electrodes for “green” Li-ion batteries and more durable batteries	45
5.4. Recycling and LCA	47
CHAPTER 6. SMART MATERIALS	49
6.1. Photonics of insertion materials to create photo-rechargeable batteries	50
6.2. Micro-energy sources.	51
CHAPTER 7. TECHNOLOGY TRANSFER, RESEARCH PROMOTION AND EDUCATION	53
7.1. Development: industrial property	53
7.2. Education	54
7.2.1. Erasmus Mundus Master’s degree: Materials for Energy Storage and Conversion (MES-C)	55
7.2.2. Specialization in Energy Storage and Conversion (SCE), at ENSCBP (Bordeaux – INP)	57
CONCLUSION	59
BIBLIOGRAPHY	63
INDEX	75
