<b>Foreword</b> . . . . .	ix
<b>Acknowledgements</b> . . . . .	xi
<b>Introduction</b> . . . . .	xiii
<b>Chapter 1. Organic Semiconductors</b> . . . . .	1
1.1. Recap on organic chemistry . . . . .	1
1.2. Quantum model of the atom . . . . .	2
1.2.1. Electronic structure of atoms . . . . .	4
1.2.2. Molecular orbitals . . . . .	6
1.3. Sigma ( $\sigma$ ) and pi ( $\pi$ ) bonds. . . . .	10
1.4. Example of molecular orbitals for simple molecules . . . . .	10
1.4.1. Example of the dihydrogen molecule . . . . .	10
1.4.2. The case of carbon . . . . .	11
1.4.3. Hybridization of the carbon atom . . . . .	12
1.4.4. The $sp^3$ hybridization of carbon . . . . .	13
1.4.5. $Sp^2$ hybridization of carbon . . . . .	14
1.4.6. The $sp$ hybridization of carbon . . . . .	15
1.5. Energy diagram of different types of hybridization . . . . .	16
1.6. Conjugate molecules . . . . .	18
1.6.1. Ethylene . . . . .	19
1.6.2. Benzene . . . . .	20
1.7. Conjugate polymers . . . . .	21
1.8. Influence of conjugation length . . . . .	21
1.9. Electronic properties of organic materials . . . . .	23

1.10. Optical properties of organic semiconductors . . . . .	25
1.10.1. Fluorescence and phosphorescence . . . . .	25
1.10.2. Optical transitions in organic materials . . . . .	26
1.10.3. Energy transfer phenomena . . . . .	30
1.10.4. Förster mechanism . . . . .	31
1.10.5. Dexter mechanism . . . . .	33
1.11. Losses in organic materials. . . . .	34
1.11.1. Bi-molecular interaction losses . . . . .	34
1.11.2. Losses by polaron absorption . . . . .	34
1.11.3. Singlet–singlet (S–S) losses . . . . .	35
1.11.4. Triplet–triplet (T–T) annihilation. . . . .	35
1.11.5. Singlet–triplet (S–T) . . . . .	36
1.11.6. Losses by inter-system crossing . . . . .	36
1.11.7. Polaron absorption losses . . . . .	37
1.12. Notions of photometry . . . . .	37
1.12.1. Light flow . . . . .	38
1.12.2. Luminous intensity . . . . .	40
1.12.3. Luminance . . . . .	41
1.12.4. Illumination . . . . .	42
1.12.5. Yields . . . . .	43
1.13. Concepts of colorimetry. . . . .	45
1.14. Conclusion . . . . .	47
<b>Chapter 2. Organic Light-emitting Diodes . . . . .</b>	<b>49</b>
2.1. Operation of an OLED . . . . .	50
2.2. Injection of charge carriers. . . . .	53
2.2.1. Meaning and advantage of aligning the energy levels . . . . .	54
2.2.2. The different mechanisms of charge injection at the electrodes . . . . .	55
2.2.3. Optimization of charge injection . . . . .	59
2.3. Charge transport . . . . .	62
2.3.1. Hole transport layer . . . . .	62
2.3.2. Electron transport layer . . . . .	68
2.4. Recombinations of charges and generation of excitons . . . . .	72
2.4.1. The ideal host material. . . . .	73
2.4.2. Electron-transporting host materials . . . . .	73
2.4.3. Hole-transport layer host materials . . . . .	74
2.5. Dopants (guests) . . . . .	76
2.5.1. Dopants emitting in the red spectrum . . . . .	76
2.5.2. Green-emitting dopants . . . . .	79
2.5.3. Blue-emitting dopants . . . . .	79

---

2.6. OLED fabrication techniques . . . . .	82
2.6.1. Vacuum deposition . . . . .	83
2.6.2. Spin coating . . . . .	85
2.6.3. Inkjet printing deposition . . . . .	86
2.6.4. The technique of Roll-to-Roll deposition . . . . .	89
2.6.5. What is the best deposition method? . . . . .	89
2.7. Characterization of an OLED's electroluminescence . . . . .	90
2.8. Current-voltage-luminance (J-V-L) characterization of an OLED heterostructure. . . . .	90
2.9. Conclusion . . . . .	93
<b>Chapter 3. Organic Lasers . . . . .</b>	<b>95</b>
3.1. Principle behind lasers . . . . .	96
3.1.1. Transition mechanisms . . . . .	96
3.1.2. The laser cavity . . . . .	102
3.1.3. Pumping . . . . .	108
3.2. Laser effect in organic materials . . . . .	108
3.2.1. Optical gain in organic semiconductors. . . . .	109
3.2.2. Optical resonators. . . . .	111
3.3. Theoretical model of an organic semiconductor laser. . . . .	112
3.4. Optically pumped organic lasers . . . . .	115
3.4.1. The organic gain medium . . . . .	115
3.4.2. Different types of laser cavity . . . . .	117
3.5. A step toward the electrically pumped organic laser. . . . .	121
3.5.1. State of the art. . . . .	121
3.5.2. A step toward the organic laser diode (electrically pumped). . . . .	126
3.6. Conclusion . . . . .	130
<b>Chapter 4. Organic Plasmonics: Toward Organic Nanolasers . . . . .</b>	<b>131</b>
4.1. Optical properties of metals . . . . .	132
4.1.1. Drude's model. . . . .	133
4.1.2. Drude–Lorentz model . . . . .	134
4.1.3. Drude's model with two critical points . . . . .	135
4.2. What is a plasmon? . . . . .	136
4.2.1. Volume plasmon . . . . .	136
4.2.2. Delocalized surface plasmon . . . . .	137
4.2.3. Localized surface plasmon . . . . .	138

4.3. Theoretical approach to the localized surface plasmon (LSP) . . . . .	139
4.3.1. Mie's theory . . . . .	140
4.3.2. Dipolar model or quasi-static approximation. . . . .	140
4.3.3. Theories on effective dielectric functions. . . . .	142
4.3.4. Numerical study by FDTD (Finite-Difference Time-Domain) . . . . .	142
4.4. Parameters influencing the localized surface plasmon . . . . .	143
4.4.1. Effect of size. . . . .	144
4.4.2. Effect of form . . . . .	144
4.4.3. Effect of composition . . . . .	145
4.4.4. Effect of environment . . . . .	145
4.5. Plasmonic materials and their properties. . . . .	146
4.6. Optical properties of an emitter in the vicinity of a metallic NP . . . . .	149
4.6.1. Modification of absorption . . . . .	150
4.6.2. Modification of electroluminescence . . . . .	152
4.6.3. Modification of photoluminescence . . . . .	155
4.6.4. Amplification versus loss: analysis and discussion . . . . .	157
4.7. Effect of LSP on the properties of organic sources: state of the art. . . . .	158
4.7.1. Study of the effect of random metallic nanoparticles (RMN) on the properties of OLEDs . . . . .	162
4.7.2. Study of the effect of periodic metallic nanoparticles (PMNs) on the properties of OLEDs. . . . .	166
4.7.3. Study of a plasmonic OLED in a vertical half-cavity . . . . .	173
4.8. A step toward an organic plasmonic laser? . . . . .	176
4.8.1. The spaser . . . . .	176
4.9. Conclusion . . . . .	181
<b>Conclusion</b> . . . . .	183
<b>Appendix</b> . . . . .	187
<b>Bibliography</b> . . . . .	195
<b>Index</b> . . . . .	211
