LIST OF ACRONYMS	xiii
PREFACE	xix
INTRODUCTION	xxiii
PART 1. MODELS THAT CAN ASPIRE TO BE BETTER SUITED TO FUTURE NEEDS	1
CHAPTER 1. DISASSEMBLING SOME TRADITIONAL VIEWS	3
1.1. Time and space: past, present and future	3
1.2. The (big) law of correspondence	5
1.3. Intricate imbrications and their uncertainties	10
1.4. Many levels: subatomic, micro, meso, macro, chrono, etc.	11
CHAPTER 2. IS GLOBALIZATION, OR HOLISM, REALLY A NEW PHENOMENON?	13
2.1. Some characteristics of the present globalization	13
2.2. A brief history of a very old concept: globalization	13
2.3. The nature of today's globalization.	17
2.4. Some features of today's globalization.	18
2.5. Impacts of a disruption: "catastrophe" in a global context	19
2.6. Management in economy: risks and disturbances are also global	20
2.7. Extending and transposing these concepts to enterprises	26
2.8. Consequences: collective consciousness and behavior	29
2.9. A common idea of "catastrophism" and the need for ecology	31
2.10. Should we try to predict that the worst is yet to come?	35

2.10.1. The question is not “knowing what will happen and when”, instead “what could and/or should happen”	35
2.10.2. Methods and tools related to conventional anticipation and prediction	37
2.11. What we can conclude at this stage	40
2.11.1. On process performance and governance guidance	40
2.11.2. On new constraints within a networked society	42
CHAPTER 3. UNDERLYING DISTURBING PROCESSES: ASYMMETRIES, CORIOLIS AND CHIRALITY	47
3.1. By way of introduction	47
3.2. New ways of thinking	48
3.3. Information asymmetry	48
3.3.1. Symmetry and asymmetry in nature	48
3.3.2. A reminder on matter, dark matter and dark energy	49
3.3.3. What kind of matter and dark energy? Is it an asymmetry?	50
3.3.4. Physical or virtual substance? Aether and “mind stuff”	51
3.3.5. Asymmetry in nature: is this a novelty?	52
3.4. Information asymmetry in a call center business	54
3.5. General Information on asymmetry: antiglobalization corporations	57
3.6. Asymmetry in communication and decision systems	58
3.7. Decision-making in an asymmetric world	60
3.7.1. When does asymmetry occur?	61
3.7.2. Asymmetry due to mental predisposition (or soul)	61
3.7.3. Application	62
3.8. Chirality and symmetry and their impact on structures	64
3.8.1. Extensions of chirality	65
3.8.2. Applications of chirality	66
3.9. The Coriolis effect	68
3.9.1. A physics reminder: the dynamic movement of bodies	68
3.9.2. Description of the Coriolis effect	68
3.9.3. Displacement and moving of physical objects: a question of amplitude	69
3.9.4. Curvature of displacements on the Earth	70
3.9.5. Application to molecular physics	71
3.9.6. Insect flight stability too	71
3.9.7. The Coriolis effect on the shape of live beings	71
3.10. Characteristics of evolution: symmetric pattern growth	72
3.10.1. Growth process of living organisms	72

3.10.2. Local complexity growth	76
3.10.3. Characteristics of the fractal structures: applications	77
3.10.4. Traffic improvement	80
3.10.5. Sunflower considerations	83
3.11. Conclusions on underlying disturbing processes	85
3.11.1. Generalities.	85
3.11.2. From rationality to ethics	86
3.11.3. Consequences: highlighted concepts for a new engineering methodology	87
3.12. Appendix	89

**CHAPTER 4. TIME AND SPACE REVISITED IN
THE CONTEXT OF COMPLEX SYSTEMS 91**

4.1. Time and space revisited in dwindling dance	91
4.2. The concept of time within complex systems.	92
4.2.1. What is in an issue?	92
4.2.2. Notions relative to the perception of time: a static point of view.	93
4.2.3. Digital time: a dynamic point of view.	95
4.2.4. More about time with the Web	96
4.2.5. Time is not a continuous variable	99
4.3. The perception of space	100
4.3.1. What is in an issue?	100
4.3.2. On the perception of a disturbance.	101
4.4. Impacts related to the perception in space and time	102
4.4.1. The increasing reach of media	102
4.4.2. Knowledge management and the shrinking of the space-time system	104
4.4.3. On the rationality of our world	105
4.4.4. Are time and space essential parameters and variables?	106
4.4.5. How are antagonisms linked to time?	112
4.5. On the reversibility of time	114
4.5.1. What is in a notion?	114
4.5.2. Example 1: the study of an inverse function	115
4.5.3. Examples 2: losing one's key, wasting or forgetting an idea.	117
4.5.4. Consequences for practical life: time's arrow	118
4.5.5. On decision support systems, reversibility and sustainability.	120
4.6. Consequences for the complex systems surrounding us.	123
4.7. Conclusions.	129

4.7.1. Generalities	129
4.7.2. About decision-making	132
CHAPTER 5. THE ENTROPY OF SYSTEMS	135
5.1. System entropy: general considerations	135
5.1.1. Introduction	135
5.1.2. Information and its underlying role in message and decision significance	136
5.1.3. Consequences	138
5.2. The issue and context of entropy within the framework of this book	140
5.3. Entropy: definitions and main principles – from physics to Shannon	141
5.3.1. Entropy: introduction and principles	141
5.3.2. A comment.	143
5.4. Some application fields with consequences	143
5.4.1. Entropy in the telecommunications systems	144
5.4.2. Entropy in decision-making (for DSS applications)	145
5.5. Generalization of the entropy concept: link with sustainability	147
5.5.1. A comment.	148
5.5.2. An interpretation of entropy.	148
5.5.3. Diversity in measuring entropy.	150
5.6. Proposal for a new information theory approach.	151
5.7. Main conclusions	153
PART 2. ON COMPETITIVENESS: NATURE AS AN OBVIOUS APPROACH IN SUSTAINABILITY	157
INTRODUCTION TO PART 2	159
CHAPTER 6. A CONTINUOUS SURVIVAL OF SPECIES? CRISIS AND CONSCIOUSNESS PRODUCTIONS	163
6.1. Introduction and general considerations: what's new behind life?	163
6.2. Life survival: introduction and model transposition	167
6.3. Discussing the situation in between the three areas	172
6.4. Discussing the situation inside each of the three areas	174
6.5. Evolution of life: impact on management decision systems	175
6.5.1. How does the brain work? Are we exhaustively perceptive?	176
6.5.2. Levels of consciousness in the brain: application to DSS	178
6.5.3. Survival and decision-making: what makes the difference?	181

6.5.4. Consequences	183
6.6. Opening new thinking ways	184
6.6.1. When consciousness leads to ethics	184
6.7. Consciousness as an iterative feedback process growing from one level to another	185
6.8. Life and equilibriums in ecosystems	187
6.8.1. About the need for changing some paradigms	188
6.8.2. Application to ecosystems.	189
6.8.3. Life: why and how? To perpetrate the survival of an ecosystem?	192
6.8.4. Who is behind “survival” considerations? Who is the supervisor?	193
6.8.5. Survival methodologies: which attitude and behavior?	195
6.8.6. Role time and evolution mechanisms in survival	197
6.9 Conclusions	198
6.10. Consequences and action plan	200

CHAPTER 7. AGING AND SURVIVAL: APPLICATION TO HUMAN BEINGS, EUSOCIALITY AND AN INCLUSIVE SOCIETY 203

7.1. A general consideration: what is new behind life?	203
7.2. A little bit more about aging, survival and eusociality	203
7.3. Does aging equal disability?	204
7.4. Aging and intelligence: variance and time dependency	207
7.5. Back to eusociality	212
7.5.1. What is in a concept?	212
7.5.2. Relationship with the “Inclusive Society”	213
7.6. As a first conclusion.	216
7.7. Case study: aging, motivation and involvement in collaborative work	219
7.7.1. Introducing the case	219
7.7.2. The problem definition.	219
7.7.3. Why the aging of an organization is often linked to that of its members	220
7.7.4. Aging and motivation	222

CHAPTER 8. EVOLUTION OF LIFE PRINCIPLES: APPLICATION TO A CORPORATE POPULATION 227

8.1. Introduction: corporate aging and dying	227
8.2. The human resources situation of small- and medium-sized enterprises	230
8.3. The human resources situation in senior enterprises	231
8.4. Global evolution: the product lifecycle of an enterprise.	232

8.5. Product lifecycle management.	234
8.6. Example of corporate life and death: the saturation stage.	235
8.7. Product lifecycle of new technologies	237
8.8. How to model the evolution of an organism (enterprise)	239
8.9. How to measure and control aging in enterprises	240
CONCLUSION TO PART 2	245
PART 3. GOLDEN SECRETS AND MECHANISMS	249
CHAPTER 9. TECHNOLOGY TOTALITARIANISM IN SOCIETY, CHANGE MANAGEMENT AND GOVERNANCE CONCERNS	251
9.1. Introduction.	251
9.2. Consequences associated with Web usage	252
9.3. Public–private governance: a privacy process issue	253
9.4. The principle of impermanence: Snapchat and Confide.	254
9.5. Extension of the applications	255
9.6. Pervasive network interconnections	256
9.7. Enterprises: Web evolution and sustainability	257
9.8. Additional comments about the control of instabilities	258
9.9. Sustainable networks	259
CHAPTER 10. PRINCIPLES AND PRACTICAL MECHANISMS OF SELF-ORGANIZATION: IN A WORLDWIDE COOPERATIVE CONTEXT	261
10.1. Introduction: complexity in nature	261
10.2. Complexification: main principles of the “fabricational” evolution.	263
10.2.1. Fundamental rules are quite simple and universal	263
10.2.2. Application: an example of complexification.	266
10.2.3. What is next?	270
10.3. Self-organization: the basic principles to understand system complexity	271
10.3.1. Closed loop systems	271
10.3.2. Analysis of the feedback loops	272
10.4. Application to the real world.	274
10.4.1. Networks, social networks and Web applications	274
10.4.2. The brain: the evolution of the human species is in continuous momentum.	276
10.5. Conclusions	279
10.5.1. Impact on risk management	279
10.5.2. Impact on system sustainability.	280

CHAPTER 11. COMPLEX SYSTEMS APPRAISAL: SUSTAINABILITY AND ENTROPY IN A WORLDWIDE COOPERATIVE CONTEXT	283
11.1. Introduction	283
11.2. The context	285
11.3. Information systems: some application fields and the consequences.	287
11.3.1. Entropy in information systems: business intelligence	287
11.3.2. Importance of entropy in an organization	290
11.3.3. Recommendations and management practices in sustainable systems	293
11.4. Evolution of entropy in complex systems	295
11.4.1. Notion of time in artificial intelligence	295
11.4.2. Temporal evolution of entropy in reasoning processes	295
11.4.3. Discontinuities in the increase and reduction of the state vectors	299
11.5. Underlying sustainability principles in information and decision.	302
11.5.1. Structuring in phases	302
11.5.2. Analyzing the scientific thought	303
11.5.3. Knowledge structuring principles	304
11.5.4. Basic characteristics and measurement of an information system	305
11.5.5. Increasing complex system design: measurement	307
11.5.6. Entropy control in information systems: a set of practices	308
11.6. Business intelligence systems and entropy.	309
11.6.1. Introduction	309
11.6.2. The brain: some specificities	310
11.6.3. The brain: underlying principles for a DSS organization.	312
11.6.4. Collaboration and collective approaches	314
11.6.5. Loneliness: a common impact of collective approaches	317
11.6.6. Organization of some target complex systems	320
11.7. The holonic enterprise paradigm	320
11.7.1. Introduction	320
11.7.2. Properties of holons.	321
11.7.3. A transposition.	323
11.7.4. A comment	325
11.8. Self-organization and entropy	326
11.8.1. Discussing examples	326
11.8.2. What comes after holonic systems?	327
11.8.3. Evolution	328
11.8.4. Consequences	331
11.9. Analysis of new trends in sustainable production systems	332

11.9.1. Introduction	332
11.9.2. Research and development	333
11.9.3. Emergence of modern networking: concepts and entropy	335
11.9.4. Evolving organization of the networks	336
11.9.5. Impact of disturbances	337
11.9.6. Lean concepts: continuous flow manufacturing (CFM) and just-in-time (JIT)	339
11.9.7. The general problem of “decoupling” processes	341
11.9.8. Network and Web sciences	341
11.10. Artificial life and collective thinking science	344
11.10.1. General comments about bio-mimicry	345
11.10.2. Bio-inspired information systems	346
11.10.3. Reminder of bio-inspired technologies and their sustainability.	349
11.10.4. What about cloud computing?	353
11.11. Conclusions	355
11.11.1. Proposal for a new approach in information and business theory	356
11.11.2. Conclusion	359
11.11.3. Concluding remarks.	360
CHAPTER 12. TELEPATHY AND TELESYMPATHY	361
12.1. About the brain	361
12.2. The law of accelerating returns	362
12.2.1. Introduction	362
12.2.2. The role of the interconnections in the new paradigm	363
12.2.3. Factors involved in a major change: skill mismatch.	364
12.2.4. Brain communication: telesympathy and telepathy	366
12.2.5. Non-invasive brain–computer interface	366
12.3. Telepathy: an ultimate process?	367
12.3.1. Quantum entanglement and telepathy	368
12.3.2. Quantum entanglement and teleportation	370
12.4. Telesympathy: a less ambitious prerequisite.	370
12.4.1. Introduction	370
12.4.2. Origin of telesympathy	371
12.4.3. Definition of telesympathy	372
12.4.4. A comment	372
12.5. Conclusions	373
BIBLIOGRAPHY	375
INDEX	397
