Introduction	ix
Chapter 1. Semi-Markov Processes	
Migration Credit Risk Models	1
1.1. Rating and migration problems	1
1.1.1. Ratings	1
1.1.2. Migration problem	3
1.1.3. Impact of rating on spreads for zero bonds	5
1.1.4. Homogeneous Markov chain model	7
1.1.5. Migration models	8
1.2. Homogeneous semi-Markov processes	10
1.2.1. Basic definitions	10
1.2.2. The Z SMP and the evolution equation system	14
1.2.3. Special cases of SMP	16
1.2.4. Sojourn times and their distributions	19
1.3. Homogeneous semi-Markov reliability model	21
1.4. Homogeneous semi-Markov migration model	23
1.4.1. Equivalence with the reliability problem	23
1.4.2. Transient results.	24
1.4.3. Asymptotic results	26
1.4.4. Example	28
1.5. Discrete time non-homogeneous case	33
1.5.1. NHSMPs and evolution equations	33
1.5.2. The Z NHSMP	34
1.5.3. Sojourn times and their distributions	36
1.5.4. Non-homogeneous semi-Markov reliability model	37

1.5.5. The non-homogeneous semi-Markov migration model	38
1.5.6. A non-homogeneous example	39
Chapter 2. Recurrence Time HSMP and NHSMP: Credit Risk Applications	51
2.1. Introduction.	51
2.2. Recurrence times	52
2.3. Transition probabilities of homogeneous SMP and non-homogeneous SMP with recurrence times	53
2.3.1. Transition probabilities with initial backward	53
2.3.2. Transition probabilities with initial forward	55
2.3.3. Transition probabilities with final backward and forward	57
2.3.4. Transition probabilities with initial and final backward	58
2.3.5. Transition probabilities with initial and final forward	60
2.3.6. Transition probabilities with initial and final backward and forward	61
2.4. Reliability indicators of HSMP and NHSMP with recurrence times.	63
2.4.1. Reliability indicators with initial backward	63
2.4.2. Reliability indicators with initial forward.	66
2.4.3. Reliability indicators with initial and final backward.	70
2.4.4. Reliability indicators with initial and final backward and forward	73
Chapter 3. Recurrence Time Credit Risk Applications	79
3.1. S&P's basic rating classes	80
3.1.1. Homogeneous case	81
3.1.2. Non-homogeneous case	86
3.2. S&P's basic rating classes and NR state	90
3.2.1. Homogeneous case	91
3.2.2. Non-homogeneous case	106
3.3. S&P's downward rating classes	120
3.3.1. An application.	122
3.4. S&P's basic rating classes & NR1 and NR2 states.	127
3.5. Cost of capital implications	134
Chapter 4. Mono-Unireducible Markov and Semi-Markov Processes	137
4.1. Introduction.	137
4.2. Graphs and matrices.	138
4.3. Single-unireducible non-homogeneous Markov chains	145

4.4. Single-unireducible semi-Markov chains	152
4.5. Mono-unireducible non-homogeneous backward semi-Markov chains	158
4.6. Real data credit risk application	160
Chapter 5. Non-Homogeneous Semi-Markov Reward Processes and Credit Spread Computation	165
5.1. Introduction.	165
5.2. The reward introduction	166
5.3. The DTNHSMRWP spread rating model	168
5.4. The algorithm description	170
5.5. A numerical example	173
5.5.1. Data	173
5.5.2. Results	176
Chapter 6. NHSMP Model for the Evaluation of Credit Default Swaps	183
6.1. The price and the value of the swap: the fixed recovery rate case	184
6.2. The price and the value of the swap: the random recovery rate case	188
6.3. The determination of the n -period random recovery rate	196
6.4. A numerical example	198
Chapter 7. Bivariate Semi-Markov Processes and Related Reward Processes for Counterparty Credit Risk and Credit Spreads	205
7.1. Introduction.	206
7.2. Multivariate semi-Markov chains.	208
7.3. The two-component reliability model	220
7.4. Counterparty credit risk in a CDS contract	224
7.4.1. Pricing a risky CDS and CVA evaluation	227
7.5. A numerical example	230
7.6. Bivariate semi-Markov reward chains	233
7.7. The estimation methodology.	247
7.8. Credit spreads evaluation.	249
7.9. Numerical experience.	259
Chapter 8. Semi-Markov Credit Risk Simulation Models	267
8.1. Introduction.	267
8.2. Monte Carlo semi-Markov credit risk model for the Basel II <i>Capital at Risk</i> problem.	267

8.2.1. The homogeneous MCSM evolution with D as absorbing state	269
8.3. Results of the MCSMP credit model in a homogeneous environment	273
Bibliography	279
Index	297
