Table of Contents

Chapter 1. Fundamentals of Error Analysis and their Uncertainties in Dimensional Metrology Applied to Science and Technology 1

1.1. Introduction to uncertainties in dimensional metrology 1
1.2. Definition of standards 4
1.3. Definition of errors and uncertainties in dimensional metrology 9
1.3.1. What is the difference between error and uncertainty? 10
1.3.2. Why make a calculation of errors' uncertainty? 11
1.3.3. Reminder of basic errors and uncertainties 11
1.3.4. Properties of uncertainty propagation 13
1.3.5. Reminder of random basic variables and their functions 14
1.3.6. Properties of random variables of common functions 15
1.4. Errors and their impact on the calculation of uncertainties 15
1.4.1. Accidental or fortuitous errors 15
1.4.2. Systematic errors 16
1.4.3. Errors due to apparatus 18
1.4.4. Errors due to the operator 18
1.4.5. Errors due to temperature differences 18
1.4.6. Random errors. 21
1.5. Applications based on errors in dimensional metrology. 35
1.5.1. Absolute error $|\delta| = E_a$ 35
1.5.2. Relative error $\delta = E_r$ 35
1.5.3. Systematic error. 36
1.5.4. Accidental error (fortuitous error) 36
1.5.5. Expansion effect on a bore/shaft assembly 36
1.6. Correction of possible measurement errors 42
1.6.1. Overall error and uncertainty 45
1.6.2. Uncertainty due to calibration methods 46
1.6.3. Capability of measuring instruments 47

1.7. Estimation of uncertainties of measurement errors in metrology 48
1.7.1. Definitions of simplified equations of uncertainty measurements 48
1.7.2. Issue of mathematical statistics evaluation of uncertainties in dimensional metrology 49
1.7.3. Uncertainty range, coverage factor k and range of relative uncertainty 51
1.8. Approaches for determining type A and B uncertainties according to the GUM 53
1.8.1. Introduction 53
1.8.2. Properties 54
1.8.3. Brief description of type-A uncertainty evaluation method 57
1.8.4. Type-B uncertainty methods 59
1.9. Principle of uncertainty calculation: types A and B 69
1.9.1. Error on the repeated measure: calculation of compound standard uncertainty 71
1.9.2. Applications on the laboratory calculations of uncertainties. 74
1.9.3. Simplified models for the calculations of measurement uncertainties 75
1.9.4. Laboratory model of dimensional metrology. 79
1.9.5. Measurement uncertainty evaluation discussion. 79
1.9.6. Contribution of the GUM in dimensional metrology 81
1.10. Summary 82
1.11. Bibliography 83

Chapter 2. Fundamentals of Dimensional and Geometrical Tolerances According to ISO, CSA (Canada), and ANSI (USA) 85

2.1. Introduction to geometrical products specification. 85
2.2. Dimensional tolerances and adjustments 89
2.2.1. Adjustments with clearance: Ø80 H8/f7 91
2.2.2. Adjustments with uncertain clearance: Ø80 H7/k6 91
2.2.3. Adjustments with clamping or interference 91
2.2.4. Approach for the calculation of an adjustment with clearance . . . 93
2.2.5. Dimensioning according to ANSI and CSA 94
2.2.6. Definition of geometrical form constraints 96
2.3. International vocabulary of metrology 97
2.3.1. Local nominal dimensions according to ISO/DIS 14660-1996 . . . 97
2.3.2. Definition of the axis extracted from a cylinder or a cone 98
2.3.3. Definition of the local size extracted from a cylinder. 99

2.3.4. Definition of local size extracted from two parallel surfaces 100
2.3.5. Notion of simulated element and associated element 101
2.4. GPS standard covering ISO/TR14638-1995 103
2.4.1. Principle of independency according to ISO 8015-1985 (classic case) 103
2.4.2. Envelope requirement according to ISO 8015 104
2.4.3. Maximum material principle according to ISO 2692-1988 (classic case) 106
2.4.4. Form tolerances 108
2.4.5. Flatness tolerances 109
2.4.6. Straightness tolerance 109
2.4.7. Roundness 111
2.4.8. Cylindricity 112
2.4.9. Orientation tolerances 113
2.4.10. Parallelism (straight line/straight line) 114
2.4.11. Parallelism plane/plane (plane/straight line) on CMM 116
2.4.12. A workshop exercise on dimensional metrology 118
2.4.13. Angularity 119
2.4.14. Positioning tolerances 119
2.4.15. Tolerance of single radial flap (radial runout) 127
2.4.16. Tolerance of single axial flap (axial runout) 127
2.4.17. Zone of tolerance applied to a restricted portion of the piece (as in // and in ⏥) 130
2.4.18. Projected tolerance zone according to ISO 10578 (classic case) 131
2.5. Conicity according to ISO 3040-1990 136
2.5.1. Conicity calculation: slope, tan(α), large and small diameter 138
2.6. Linear dimensional tolerances 139
2.6.1. Consequence: “size” tolerancing 141
2.6.2. Consequence: independency with regard to the form 142
2.7. Positioning a group of elements 143
2.8. GPS standards according to the report CR ISO/TR14638 of 1996 . . . 145
2.9. Rational dimensioning for a controlled metrology: indices of capability and performance indices statistical process specification 147
2.10. Summary and discussion 159
2.11. Bibliography 161

Chapter 3. Measurement and Controls Using Linear and Angular Standards 163

3.1. Key dimensional metrology standards 163
3.1.1. Time and frequency standards 164
3.1.2. Force and pressure standards 165

3.1.3. Electrical standards . . . 165
3.1.4. Temperature standards . . . 166
3.1.5. Photometric standards . . . 166
3.1.6. Measurement, comparison, and control . . . 166
3.2. Meter, time, and mass . . . 168
3.2.1. The meter . . . 168
3.2.2. Time . . . 169
3.2.3. Mass . . . 170
3.3. Deformations and mechanical causes of errors . . . 170
3.3.1. Quantitative assessment of gauge blocks . . . 170
3.3.2. Assessment of cylindrical rod and ball gauges (spheres). Local crashing of cylindrical rods K_1 . . . 172
3.3.3. Recommendations for correct block staking . . . 173
3.3.4. Punctual contact (spherical buttons, beads, and thread flanks of a thread buffer) $K_2°$ . . . 174
3.3.5. Total flattening of cylindrical gauges (k_p) . . . 175
3.3.6. Total flattening of balls (spheres)K_{sph} . . . 176
3.3.7. Measurement and precision with micrometer . . . 177
3.4. Marble, V-blocks, gauge blocks, and dial gauges . . . 180
3.4.1. Control of flat surfaces on marble . . . 180
3.4.2. Measurement by comparison of small marble surfaces . . . 180
3.4.3. V-shaped block . . . 182
3.4.4. Parallel blocks . . . 183
3.5. Dial gauge . . . 185
3.5.1. Mechanical dial gauges with inside and outside contacts . . . 188
3.5.2. Sizes of fixed dimensions, or Max–Min . . . 189
3.5.3. Bore gauges . . . 189
3.5.4. Bore gauges . . . 191
3.5.5. Plain rings . . . 191
3.5.6. Spindle bores . . . 192
3.5.7. Inside gauges (micrometer) . . . 193
3.5.8. Depth gauges . . . 195
3.5.9. Telescopic bore gauges . . . 196
3.6. Example of a laboratory model . . . 199
3.6.1. Table of experimental measurements . . . 199
3.7. Precision height . . . 200
3.7.1. Directions for use of height masters (or height gauges) . . . 201
3.7.2. Adjustable parallel gauge blocks and holding accessories . . . 201
3.7.3. Example of a laboratory model . . . 203
3.7.4. Table of experimental measurements . . . 203
3.7.5. Precision height gauge check master . . . 204
3.7.6. Caliper gauge control . . . 205
3.8. The universal protractor vernier . . . 205

3.8.1. Direct angle measurement 207
3.8.2. Indirect angular measurement 208
3.8.3. Vernier height gauge 208
3.8.4. Gear tooth vernier caliper 209
3.9. Vernier calipers 211
3.9.1. Various measurements of a dimension using a caliper 213
3.9.2. Possible errors when using a caliper 214
3.10. Micrometer or Palmer 216
3.10.1. Principle of micrometric screw 217
3.10.2. Manipulations to perform a measurement with a Palmer 217
3.10.3. Adjusting micrometers 220
3.10.4. Control of parallelism and flatness of the micrometer's measuring surfaces using optical glass 221
3.10.5. Measurement of screw threads by three-wire method 226
3.10.6. Ruler and gauges for the control of screw threads 228
3.10.7. Micrometer with fine point 229
3.10.8. Disc micrometers to measure shoulder distances 230
3.10.9. Outside micrometer caliper type 231
3.11. Summary 234
3.12. Bibliography 235

Chapter 4. Surface Control 237

4.1. Control and measurement of angles 237
4.1.1. Angles defects 239
4.2. Surfaces of revolution 241
4.2.1. Fundamentals of the analysis of conical surfaces control 243
4.2.2. Control by comparison to a standard 245
4.2.3. Using the buffer and the cone-shaped ring 246
4.2.4. Measuring angles with gauges and balls 246
4.2.5 Principle of measurement called "sine" 253
4.2. Metric thread (M) measurement on gauge 258
4.3.1. Laboratory control of the conicity with balls and gauges 259
4.4. Controls of cones on machine-tools 261
4.4.1. Method of swivel slide 261
4.4.2. Method of lateral displacement of the tailstock of a lathe 263
4.5. Control of flat surfaces 264
4.5.1. Properties of a dihedron 265
4.5.2. Control of large flat surfaces 266
4.6. Control of cylindrical surfaces (of revolution) 270
4.6.1. Cylindrical surface 270
4.6.2. Associated definitions 270
4.6.3. Cylindricity defects 271

4.6.4. Control of a cylinder on three contact tips on a V-block 272
4.6.5. Practical control of the straightness of the generatrix of a cylinder 280
4.6.6. Control of the perpendicularity of the generatrix and the drive circle 280
4.7. Control of surfaces of revolution with spherical forms 281
4.7.1. Description and functioning of a spherometer 282
4.7.2. Laboratory (workshop) simulated on the appropriate use of spherometer 284
4.7.3. Control and measurement with spherometer (second approach) 285
4.7.4. Generating a spherical surface 287
4.8. Control of the relative positions of surfaces 290
4.8.1. Control of parallelism for surfaces or edges 291
4.8.2. Control of parallelism for two dihedral edges 291
4.8.3. Control of the angular position of surfaces, distance between the axis of a bore and the plane 292
4.8.4. Control of distance between the sphere center and the plane 293
4.8.5. Control of the position of the edge of a dihedron 294
4.9. Methods of dimensional measurement 294
4.9.1. Direct method (calibration curve) 294
4.9.2. Indirect method (by comparison or differential) 294
4.9.3. Indirect method known under the term “at zero” 295
4.9.4. Measurement of flatness defect 296
4.9.5. Method for measuring flatness deviation 296
4.9.6. Operating procedure for flatness deviation measurement 299
4.9.7. Relative position of measuring instruments and the workpiece . . . 302
4.9.8. Control of the perpendicularity of a line to a plane 303
4.9.9. Relative position of measuring instruments and the workpiece . . . 305
4.9.10. Other controls of dimensions in relative positions 305
4.9.11. Direct measurement of an intrinsic dimension using micrometer 306
4.9.12. Summary on relative positions 307
4.10. Bibliography 308

Chapter 5. Opto-Mechanical Metrology 309

5.1. Introduction to measurement by optical methods 309
5.1.1. Description of profile projector (type Mitutoyo PH-350H) 309
5.1.2. Presentation of the main operating functions of GEOCHECK . . . 312
5.1.3. Selecting the point of origin (preset operation, zero reset) 313
5.1.4. The main functions of optical comparator 315
5.1.5. Metrology laboratories on profile projector 318

5.1.6. Plates measurement standards for profile projector 321
5.2. Principle of interferential metrology (example: prism spectroscope) 322
5.2.1. Function of two sine-waves interference 323
5.2.2. Statistical description 324
5.3. Flatness measurement by optical planes 325
5.4. Principle of interferoscope 326
5.5. Control of parallelism (case of parallel gauge-blocks) 330
5.5.1. Numerical example of laboratory 336
5.6. Conclusion 339
5.7. Bibliography 340

Chapter 6. Control of Surface States 341

6.1. Introduction to surface states control for solid materials 341
6.1.1. Terminology and definition of surface states criteria 343
6.1.2. Surface states (texture) and sampling lengths 345
6.1.3. Waviness parameters 346
6.2. Instruments for measuring surface state 348
6.2.1. Selecting cutoff for roughness measurements 348
6.3. Symbols used in engineering drawings to describe the appropriate surface state according to ANSI/ASME Y14. 36M-1996 349
6.3.1. Surface characteristics in a drawing using CAD–CAO software 351
6.3.2. Expressions of the terms of surface roughness 355
6.3.3. Description of the main surface states 358
6.4. Presentation of Mitutoyo Surftest 211 362
6.4.1. Components of rugosimeter 211 362
6.4.2. Calibration of Mitutoyo rugosimeter 211 365
6.4.3. Measurement 365
6.4.4. Practical example on the application of Surftest 211 365
6.4.5. Portable rugosimeter SJ-400 of Mitutoyo 367
6.5. The main normalized parameters of surface states used in the industry, their formulas and definitions 370
6.5.1. Waviness parameters 372
6.6. Example on the control of the roughness of a plate grade 6061 383
6.6.1. Questionnaire and laboratory approach 385
6.6.2. Table of calibrated measurement results in [micrometer] and [microinch] 386
6.6.3. Plotting using MathCAD Software 386
6.6.4. Plotting with the aid of MathCAD 388
6.6.5. Graphical results of arithmetic means R_a 390
6.6.6. Discussions 390

6.7. Calculations of the overall uncertainty in the GUM method compared to the Monte Carlo method using the software GUMic 391
6.8. Summary 392
6.9. Bibliography 393

Chapter 7. Computer-Aided Metrology-CAM 395

7.1. Coordinate-measuring machine (CMM) 395
7.1.1. Morphology of the CMM 395
7.1.2. The CMM and its environment 397
7.1.3. Advantages of CMM in metrology 398
7.2. Commonly-used geometric models in dimensional metrology. 399
7.2.1. Constructive solid geometry models. 400
7.2.2. Boundary representation models (B-REP) 401
7.2.3. Hybrid models CSG/B-REP (solid + surfaces) 401
7.2.4. NURBS (Non-Uniform Rational Beta-Splines) 402
7.2.5. TTRS (Technologically and Topologically Related Surfaces) models 406
7.2.6. Real forms, real geometric elements, real geometrical surfaces. 409
7.3. Nominal geometric elements 411
7.3.1. Modeling the ideal geometric form of a workpiece 411
7.3.2. Model of real geometric elements, reference surface (SR). 412
7.3.3. Substitution surfaces models 412
7.4. Description of styli and types of probing 415
7.4.1. Styli with ruby ball 415
7.4.2. Hemispherical-ended styli. 416
7.4.3. Sharp styli or styli with small radius. 416
7.4.4. Disc styli (or simply discs) 416
7.4.5. Cylindrical stylus 417
7.4.6. Accessories and styli extensions 417
7.5. Software and computers supporting the CMM 420
7.5.1. Geometric control. 420
7.5.2. Surface control 420
7.5.3. Coordinates systems and probes calibration 421
7.6. Starting a B504B-Mitutoyo CMM 423
7.6.1. Number of probing points 425
7.6.2. Key measuring functions of the Mitutoyo B504B CMM. 425
7.7. Measurements on CMM using the Cosmos software 427
7.7.1. Case of circle-to-circle distance 431
7.7.2. STATPAK-Win of Cosmos, Mitutoyo 441
7.8. Examples of applications using CMM 443
7.8.1. Compiling the technical file. 449

7.8.2. Constitution of the CMM laboratory report under Cosmos (or other) . . . 450
7.9. Chapter summary and future extensions of CMMs . . . 450
7.10. Bibliography . . . 452

Chapter 8. Control of Assembly and Transmission Elements . . . 453

8.1. Introduction to the control of components for temporary assembly and elements for power transmission: threads, gears, and splines . . . 453
8.1.1. Method of obtaining threads and tapping in mechanical manufacturing . . . 453
8.1.2. General description of thread dimensioning . . . 455
8.1.3. Designation of threads and tapped holes for blind holes . . . 457
8.2. Helical surface for screw threads . . . 459
8.2.1. Technological processes for tapping and its control (Go – Not Go) . . . 459
8.2.2. Tapping (by hand) with tap wrench and set of taps . . . 461
8.3. The main threads in the industry . . . 461
8.3.1. ISO Threads . . . 462
8.3.2. American Standard pipe threads . . . 467
8.3.3. The Whitworth thread . . . 468
8.3.4. BRIGGS tapered threads; cone 6.25% . . . 469
8.3.5. American Standard thread, NC and NF series . . . 470
8.3.6. Pipe threads called “GAS” . . . 470
8.3.7. Main threads implemented in Canada . . . 471
8.4. Principles of threads control . . . 478
8.4.1. Defects of the helical surface . . . 479
8.4.2. Control, without measurement, of threads . . . 480
8.4.3. Control of a thread pitch using ruler and gauge . . . 486
8.4.4. Checking the straightness of tapping tools by squaring . . . 486
8.5. Screws resistance and quality classes . . . 487
8.5.1. Minimum torques for screws with diameters of 1 to 10 mm . . . 487
8.5.2. Example of calculations of efforts on threads (North American concept) . . . 488
8.6. Control of screw thread by mechanical and optical comparison . . . 491
8.6.1. Laboratory example on threads control . . . 491
8.7. Introduction to gear control . . . 494
8.7.1. Parallel spur gears . . . 495
8.7.2. Metrological control of the main types of gears . . . 504
8.7.3. Spur gears with helical teeth . . . 505
8.7.4. Helical gears with parallel axes . . . 506
8.7.5. Parallel spur gears with helical teeth . . . 506
8.7.6. Bevel or concurrent gears . . . 507
8.7.7. Worm gears . . . 510

8.7.8. Racks 511
8.7.9. Control of gears with a vernier calipers 513
8.7.10. Chordal thickness measurement 515
8.7.11. Over wire measurement 516
8.7.12. Measuring thickness of rack teeth 517
8.8. Introduction to spline control 518
8.8.1. Dimensional control of splines 520
8.8.2. Control of the geometric correction of splines 520
8.8.3. Woodruff key – standardized ANSI B17. 2-1967 (R1998) 521
8.8.4. Control of key-seats 522
8.8.5. Calculating the depth of the housing (groove) and the distance from the top of the key 522
8.9. Summary 529
8.10. Bibliography 530

Chapter 9. Control of Materials Hardness Testing 531

9.1. Introduction to non-destructive testing 531
9.1.1. Measurements of hardness by indentation 533
9.1.2. Presentation of the main hardness tests 534
9.2. Principle and description of the Rockwell hardness 537
9.2.1. Comparison of indentation methods (Table 9.4). 539
9.2.2. Typical applications of Rockwell scales 540
9.2.3. Rockwell superficial hardness test 541
9.2.4. Rockwell hardness tests of plastics 542
9.2.5. Comparison between Shore and Rockwell hardness ball testing 542
9.2.6. Overall description of the Rockwell hardness testing machine . . . 544
9.3. Brinell hardness test 545
9.3.1. Applied load and diameter of the ball 547
9.3.2. Thickness of the tested metal 548
9.3.3. Meyer hardness test (named after Rajakovico and Meyer). 548
9.3.4. Operating procedure for Brinell hardness test 549
9.4. Principle of the Vickers hardness test 550
9.5. Knoop hardness (HK). 553
9.6. Barcol hardness 555
9.7. Rebound hardness test by Shore test (scleroscope) 556
9.7.1. Comparison of the indenters for the Rockwell and Shore tests . . . 558
9.8. Mohs hardness for minerals 558
9.8.1. Mohs scale of hardness minerals 560
9.8.2. How should the hardness of a mineral be measured? 560
9.9. IRHD rubber hardness tester. 560
9.9.1. Control of rubber and other elastomers by IRHD and Shore test . . 561

9.10. Comparison of the three main hardness tests and a practical approach for hardness testing: Brinell HB, Rockwell HR, and Vickers HV 562
9.11. Main mechanical properties of solid materials 564
9.11.1. Flow testing 564
9.11.2. Tensile testing of solid materials 564
9.11.3. Impact test for steels 567
9.12. Mechanical tests on plastic materials 575
9.12.1. Tensile strength, strain, and modulus ASTM D638 (ISO 527) 575
9.12.2. Flexural strength and modulus ASTM D 790 (ISO 178) 576
9.12.3. Impact test 576
9.12.4. Interpretation of resistance to impacts – ASTM compared to ISO 577
9.12.5. Izod impact strength ASTM D 256 (ISO 180) 577
9.13. Fatigue failure and dimensional metrology for the control of the dimensioning of materials assembled by welding 578
9.13.1. Fatigue testing 578
9.13.2. Tenacity 578
9.13.3. General tolerances for welded structures according to ISO 13920 582
9.14. Summary 583
9.14.1. There is seriously no universal solution to conduct hardness tests 584
9.14.2. Some criteria for choosing hardness testing apparatus 585
9.14.3. Indentation reading mode 586
9.14.4. The expected result 586
9.15. Bibliography 587

Chapter 10. Overall Summary 589

Glossary 595

Lexicon of terms frequently used in metrology 595
