

# Contents

<b>Dedication</b> . . . . .	xiii
<b>Preface</b> . . . . .	xv
<b>Book Organization</b> . . . . .	xix
<b>FIRST PART. MOJETTE THEORY</b> . . . . .	1
<b>Chapter 1. Discrete Geometry and Projections</b> . . . . .	3
David COEURJOLLY, Nicolas NORMAND	
1.1. Introduction . . . . .	3
1.2. Discrete pavings and discrete grids . . . . .	3
1.3. Topological principles and discrete objects . . . . .	5
1.4. Arithmetic principles . . . . .	7
1.4.1. Preliminaries . . . . .	7
1.4.2. Lattices . . . . .	8
1.4.3. Farey series, rational angle and Stern–Brocot tree . . . . .	10
1.4.4. Geometrical interpretations of arithmetic results . . . . .	10
1.5. Discrete geometry elements . . . . .	11
1.5.1. Diophantine equations and discrete lines . . . . .	11
1.5.2. Discrete projection along a rational angle . . . . .	14
1.5.3. Convexity . . . . .	16
1.5.4. Pick’s Theorem and related counting problems . . . . .	17
1.5.5. Binary mathematical morphology and two-pixel structuring elements . . . . .	17

1.6. Conclusion . . . . .	19
1.7. Bibliography . . . . .	19
<b>Chapter 2. Discrete Versions of the Radon Transform . . . . .</b>	<b>21</b>
Imants SVALBE, Jeanpierre GUÉDON	
2.1. Introduction . . . . .	21
2.2. General linear Radon transform . . . . .	22
2.2.1. The direct and inverse problems . . . . .	22
2.2.2. The ill-posedness problem . . . . .	23
2.2.3. The summing paradigm and universal use for detectors . . . . .	25
2.2.4. Radon transform in geometry and dimension . . . . .	26
2.3. Discrete versions of the Radon transform . . . . .	28
2.3.1. The algebraic reconstruction technique (ART) . . . . .	28
2.3.2. Matúš and Flusser and the finite Radon transform (FRT) . . . . .	30
2.4. Katz geometry . . . . .	37
2.5. Conclusion . . . . .	38
2.6. Bibliography . . . . .	38
<b>Chapter 3. Direct Mojette Transform . . . . .</b>	<b>41</b>
Jeanpierre GUÉDON, Nicolas NORMAND	
3.1. Introduction . . . . .	41
3.2. Computing Mojette projections . . . . .	44
3.2.1. General direct Mojette transform . . . . .	44
3.2.2. Projections of shape characteristic function and mapping function . . . . .	47
3.2.3. Alternative addition operators . . . . .	48
3.3. Properties . . . . .	49
3.3.1. Linearity, central slice theorem . . . . .	50
3.3.2. Autocorrelation . . . . .	52
3.3.3. Angular sampling . . . . .	54
3.4. Alternative pixel model . . . . .	54
3.4.1. Spline pixel model . . . . .	55
3.4.1.1. Spline 0 Mojette transform definition . . . . .	57
3.4.1.2. Spline $n$ Mojette transform definition . . . . .	60
3.4.1.3. Spline $n$ Mojette algorithms . . . . .	60
3.5. Mojette transform in higher dimensions . . . . .	61
3.5.1. 3D Mojette transform . . . . .	61
3.5.2. $n$ D Mojette transform . . . . .	63

3.6. Conclusion . . . . .	64
3.7. Bibliography . . . . .	64
<b>Chapter 4. Reconstructability with the Inverse Mojette Transform . . . . .</b>	<b>67</b>
Jeanpierre GUÉDON, Nicolas NORMAND	
4.1. Introduction . . . . .	67
4.2. The reconstructability of convex regions . . . . .	69
4.2.1. Rectangular regions and the Katz criterion . . . . .	69
4.2.2. General convex regions . . . . .	70
4.3. The choice of optimum angle sets . . . . .	71
4.3.1. Red minimization from projections of a rectangular shape . . . . .	72
4.3.2. Redundancy minimization from a small overcomplete set of projections . . . . .	74
4.4. Exact filtered backprojection reconstruction . . . . .	75
4.4.1. Algorithm . . . . .	75
4.5. The notion of phantoms and partial reconstructability . . . . .	76
4.5.1. Example . . . . .	77
4.5.2. Phantom definition . . . . .	77
4.5.3. Incomplete reconstruction theorem . . . . .	79
4.6. Reconstructability in higher dimensions . . . . .	80
4.6.1. Mojette reconstructability in 3D . . . . .	80
4.6.2. Mojette reconstructability in dimension $n$ . . . . .	81
4.7. Conclusion . . . . .	81
4.8. Bibliography . . . . .	82
<b>Chapter 5. Inverse Mojette Transform Algorithms . . . . .</b>	<b>85</b>
Nicolas NORMAND, Imants SVALBE, Pierre EVENOU, Andrew KINGSTON	
5.1. Introduction . . . . .	85
5.2. Iterative local reconstruction (ILR) . . . . .	86
5.3. Geometry-driven reconstruction (GDR) . . . . .	91
5.3.1. The case where $q_i = 1$ for $i \in \mathbb{Z}_Q$ . . . . .	91
5.3.2. The case where $p_i = m$ for $i \in \mathbb{Z}_I$ . . . . .	94
5.3.3. The case where $p_i \geq p_{i-1}$ and $q_i \leq q_{i-1}$ . . . . .	95
5.3.4. The general case . . . . .	95
5.3.5. Discussion . . . . .	96
5.4. Global Mojette reconstruction . . . . .	98
5.4.1. Discrete exact reconstruction . . . . .	98

5.4.2. The Farey backprojection . . . . .	99
5.5. Mojette inversion using the FRT . . . . .	99
5.5.1. The FRT, the Katz criterion, ghosts and information sufficiency . . . . .	101
5.5.2. Ghosts, image redundancy and Mojette inversion . . . . .	103
5.5.3. Untangling projections from ghost data using row or column data . . . . .	104
5.5.4. Untangling projections from ghost data using Latin squares . . . . .	105
5.6. Conclusion . . . . .	111
5.7. Bibliography . . . . .	111
<b>Chapter 6. Multiresolution Mojette Transform . . . . .</b>	<b>115</b>
Andrew KINGSTON, Florent AUTRUSSEAU, Benoît PARREIN	
6.1. Introduction . . . . .	115
6.2. Scalable Mojette projections . . . . .	117
6.2.1. Convolution property . . . . .	118
6.2.2. Downsampling property . . . . .	119
6.2.3. Scaling property . . . . .	120
6.3. Progressive reconstruction . . . . .	121
6.3.1. Projection schemes . . . . .	121
6.3.2. Reconstruction schemes . . . . .	123
6.4. Reconstruction of lossy or noisy scalable projections . . . . .	125
6.5. Shear-stack Mojette projections . . . . .	127
6.5.1. Projection definition . . . . .	127
6.5.2. Reconstruction from shear-stack projections . . . . .	132
6.5.2.1. A review of slant-stack reconstruction procedure . . . . .	133
6.5.2.2. Extension to blockwise reconstruction for shear-stacks . . . . .	133
6.6. Multiresolutional shear-stack Mojette projections . . . . .	134
6.6.1. The shear-stack downsampling property . . . . .	136
6.6.2. The shear-stack convolution property . . . . .	136
6.6.3. The shear-stack scaling property . . . . .	137
6.6.4. Projection description . . . . .	138
6.7. Reconstruction from multiresolution projections . . . . .	141
6.7.1. Quantization consideration . . . . .	143
6.7.2. Multiple description coding . . . . .	144
6.8. Conclusion . . . . .	145
6.9. Bibliography . . . . .	146

<b>SECOND PART. APPLICATIONS</b> . . . . .	149
<b>Chapter 7. Communication, Networks and Storage</b> . . . . .	151
Benoît PARREIN, Fadi BOULOS, Nicolas NORMAND, Pierre EVENOU	
7.1. Introduction . . . . .	151
7.2. Mojette coding: a geometric channel coding . . . . .	153
7.2.1. A redundant representation . . . . .	153
7.2.2. Geometric buffers . . . . .	155
7.2.3. Reconstruction with missing projections . . . . .	156
7.2.4. Performances . . . . .	157
7.2.4.1. Overhead . . . . .	158
7.2.4.2. Complexity . . . . .	160
7.2.4.3. Functionalities . . . . .	161
7.3. Applications in communication and storage . . . . .	161
7.3.1. Network coding . . . . .	161
7.3.1.1. Network coding process . . . . .	163
7.3.1.2. The Mojette transform for network coding . . . . .	164
7.3.1.3. Performance examples . . . . .	165
7.3.2. Self-organized networks . . . . .	167
7.3.2.1. MP-OLSR specifications . . . . .	167
7.3.2.2. Simulation results . . . . .	168
7.3.3. Distributed storage . . . . .	171
7.4. Priority encoding transmission . . . . .	174
7.4.1. Mojette priority encoding . . . . .	174
7.4.1.1. Separated geometric buffer . . . . .	174
7.4.1.2. Concatenated geometric buffer . . . . .	175
7.4.2. Optimal redundancy allocation . . . . .	176
7.4.3. Application to image transmission . . . . .	177
7.5. Conclusion . . . . .	180
7.6. Bibliography . . . . .	180
<b>Chapter 8. Mojette Discrete Tomography</b> . . . . .	183
Myriam SERVIÈRES, Jeanpierre GUÉDON, Nicolas NORMAND, Yves BIZAIS	
8.1. Introduction . . . . .	183
8.2. Operators . . . . .	184

8.2.1. Mojette operator with general pixel model and spline specialization . . . . .	184
8.2.2. Mojette backprojector $M^*$ . . . . .	189
8.2.3. Properties of $M_\delta^* M_\delta$ . . . . .	190
8.2.3.1. $M_\delta^* M_\delta$ expression . . . . .	191
8.2.3.2. $M_\delta^* M_\delta$ , a Toeplitz-Block-Toeplitz matrix . . . . .	192
8.3. Mojette operators in classic tomography algorithms . . . . .	193
8.3.1. Test images and Poisson noise . . . . .	194
8.3.2. Mojette FBP vs classic FBP . . . . .	195
8.3.2.1. FBP algorithm . . . . .	195
8.3.2.2. $K_0$ filter . . . . .	195
8.3.2.3. Mojette FBP . . . . .	197
8.3.2.4. Classical projection interpolations . . . . .	198
8.3.3. Conjugate gradient Mojette reconstruction . . . . .	201
8.3.3.1. Conjugate gradient Mojette algorithm . . . . .	201
8.3.3.2. Reconstruction without noise . . . . .	204
8.3.3.3. Conditioning of $M_\delta^* M_\delta$ . . . . .	204
8.3.3.4. Conjugate gradient Mojette reconstruction vs Mojette FBP reconstruction . . . . .	205
8.3.4. Discrete exact Mojette tomographic reconstruction . . . . .	206
8.3.4.1. Discrete exact Mojette tomographic reconstruction algorithm . . . . .	206
8.3.4.2. Reconstructions with a reduced number of angles . . . . .	207
8.3.4.3. Interpolation between projections . . . . .	208
8.4. Discussion . . . . .	211
8.5. Conclusion . . . . .	213
8.6. Bibliography . . . . .	213
<b>Chapter 9. Lossless Compression . . . . .</b>	<b>215</b>
Andrew KINGSTON, Florent AUTRUSSEAU	
9.1. Introduction . . . . .	215
9.2. A review of the preliminary study . . . . .	217
9.3. Projection compression using multichannel audio techniques . . . . .	220
9.4. Projection compression using multiband image techniques . . . . .	224
9.4.1. Intra-projection compression . . . . .	224
9.4.2. Inter-projection compression . . . . .	227
9.5. Conclusions . . . . .	232
9.6. Bibliography . . . . .	235

<b>Chapter 10. Mojette-based Security</b> . . . . .	239
Andrew KINGSTON, Florent AUTRUSSEAU, Eric GRALL, Thierry HAMON, Benoît PARREIN	
10.1. Introduction . . . . .	239
10.2. Digital watermarking . . . . .	241
10.3. Shared secret . . . . .	244
10.4. Encryption . . . . .	246
10.4.1. Encryption by reconstruction inconsistency . . . . .	246
10.4.2. Symmetric block algorithm . . . . .	252
10.4.2.1. Mojette round . . . . .	252
10.4.2.2. Mojette substitution . . . . .	253
10.4.2.3. Symmetric Mojette cipher . . . . .	256
10.4.3. Selective encryption . . . . .	258
10.4.3.1. Joint compression and encryption . . . . .	260
10.4.3.2. Cascaded Radon projections . . . . .	260
10.4.3.3. Experimental results . . . . .	263
10.5. Conclusion . . . . .	265
10.6. Bibliography . . . . .	266
<b>List of Authors</b> . . . . .	269
<b>Index</b> . . . . .	271
