

Table of Contents

Preface	xi
Chapter 1. Machining of Wood and Wood Composites	1
Grzegorz KOWALUK	
1.1. Introduction	1
1.2. Wood and wood-based composites	2
1.3. Approach to cutting	7
1.4. Main techniques of machining	11
1.5. Problems of machining wood and wood composites – a review	19
1.6. Into the future – further scenarios of wood and wood composites machining	21
1.7. Acknowledgement	23
1.8. Bibliography	24
Chapter 2. Wood and Wood-based Panel Machining Quality	27
Cristina COELHO, Nuno GARRIDO, Jorge MARTINS, Luisa CARVALHO and Carlos COSTA	
2.1. Solid wood machining	27
2.1.1. Background	27
2.1.2. Cutting forces	29

2.1.3. Chip formation	30
2.1.4. Case study – monitoring the cutting operation	33
2.2. Wood-based panels machining	39
2.2.1. State of the art	39
2.2.2. Processes for wood-based panels machining	45
2.2.3. Case study	46
2.3. Surface quality	50
2.3.1. Objective surface characterization	50
2.3.2. Subjective surface characterization	64
2.4. Case study: solid wood machining and surface quality evaluation	65
2.5. Case study: particleboard machining and edge quality evaluation	73
2.6. Bibliography.	75
Chapter 3. Reducing Tool Wear by Cryogenic Treatment and Cooling with Refrigerated Air when Processing Medium Density Fiberboard . . .	83
Rado GAZO, Judith GISIP and Harold A. STEWART	
3.1. Introduction	83
3.2. Effects of refrigerated air.	85
3.2.1. Preliminary considerations	85
3.2.2. Tool wear	90
3.2.3. Elemental analysis and tool microstructure	91
3.2.4. Electrical current and power consumption	96
3.2.5. Edge quality of MDF	98
3.2.6. Conclusions.	98
3.3. Effects of cryogenic treatment and refrigerated air	98
3.3.1. Preliminary Considerations	100
3.3.2. Tool wear	102

3.3.3. Elemental analysis and tool microstructure	103
3.3.4. Current and power draw	109
3.3.5. Sound level	110
3.3.6. Edge quality of MDF.	110
3.3.7. Conclusions	110
3.4. Acknowledgements	111
3.5. Bibliography	111
Chapter 4. Wearing Mechanisms Contributing to Reduced Tool Life after Wood and Secondary Wood Products Machining	115
Bolesław PORANKIEWICZ	
4.1. Introduction	116
4.2. Cutting edge-material cut interface.	116
4.3. TGA indirect evidence of HTTR	119
4.4. Theoretical QC analysis of HTTR	134
4.5. Investigations of direct evidence of HTTR	140
4.6. Cutting edge SEM image examinations	143
4.7. Synergistic effect of high temperature reactions and mechanical wear	146
4.8. Final remarks	150
4.9. Conclusions	154
4.10. Acknowledgements	155
4.11. Bibliography	155
Chapter 5. Monitoring Surface Quality on Molding and Sawing Processes for Solid Wood and Wood Panels	159
Alfredo AGUILERA	
5.1. Introduction	159
5.2. General concepts	160
5.2.1. Raw material: solid wood and panels	161
5.2.2. The cutting process.	165
5.3. Monitoring the cutting process	176
5.3.1. Cutting forces	178

5.3.2. Sound emission	183
5.3.3. Cutting power	188
5.4. Surface roughness and quality for solid wood and panels	190
5.4.1. Surface roughness	191
5.4.2. Quality criteria	194
5.5. Concluding remarks	210
5.6. Acknowledgements	211
5.7. Bibliography.	211
Chapter 6. Evaluating the Roughness of Sanded Wood Surfaces.	217
Lidia GURAU, Hugh MANSFIELD-WILLIAMS and Mark IRLE	
6.1. Introduction	217
6.1.1. Sanded surface quality and its evaluation	217
6.1.2. Metrology of sanded wood surfaces and associated problems	219
6.2. Profile filtering applied to wood surfaces	228
6.2.1. Profile filtering with the Gaussian filter from ISO 11562 and ASME B46.1	228
6.2.2. Profile filtering with the Gaussian two step filter from ISO 13565-1	233
6.2.3. Profile filtering with the Gaussian regression filter from ISO/TS 16610 – 31	235
6.3. A proposed method for separating processing roughness from anatomical roughness.	246
6.4. A case study: the processing roughness of oak surfaces sanded with various grit sizes	250
6.4.1. Experimental design	250
6.4.2. Results and discussion	253
6.4.3. Conclusions.	258
6.5. Concluding remarks	259

6.6. Perspectives	260
6.7. Acknowledgements	261
6.8. Bibliography	261
List of Authors	269
Index	273
