

## Table of Contents

<b>Introduction</b> . . . . .	ix
Éric LHEURETTE	
<b>Chapter 1. Overview of Microwave and Optical Metamaterial Technologies</b> . . . . .	1
Didier LIPPENS	
1.1. Introduction and background . . . . .	1
1.2. Omega-type arrays . . . . .	6
1.2.1. Dispersion and angular properties . . . . .	7
1.2.2. Tunable omega-type structure . . . . .	11
1.2.3. Omega-type pattern at millimeter wavelengths . . . . .	14
1.2.4. SRRs at infrared . . . . .	15
1.3. Transmission lines with series capacitances and shunt inductances . . . . .	17
1.3.1. Tuneable phase shifter for centimeter wavelengths . . . . .	18
1.3.2. Left-handed transmission lines at tetrahertz frequencies . . . . .	18
1.4. Fishnet approach . . . . .	20
1.4.1. Tunable fishnet for centimeter wavelengths . . . . .	21
1.4.2. Terahertz subwavelength holes arrays . . . . .	21
1.4.3. Wedge-type devices . . . . .	25
1.4.4. Fishnet with twisted apertures: chiral device . . . . .	27
1.5. Full dielectric approach: Mie resonance based devices . . . . .	28
1.5.1. BST cube technology . . . . .	30
1.6. Photonic crystal technology . . . . .	31
1.6.1. Principle . . . . .	32
1.6.2. Flat lens . . . . .	33
1.6.3. Carpet cloaking devices . . . . .	35
1.7. Conclusion and prospects . . . . .	37
1.8. Acknowledgments . . . . .	38
1.9. Bibliography . . . . .	39

<b>Chapter 2. MetaLines: Transmission Line Approach for the Design of Metamaterial Devices</b> . . . . .	43
Bruno SAUVIAC	
2.1. Introduction . . . . .	43
2.2. Historical concepts of transmission lines and homogenization . . . . .	43
2.2.1. Electrical model. . . . .	43
2.2.2. Homogenization. . . . .	45
2.3. CRLH transmission lines . . . . .	46
2.3.1. MetaLine cell . . . . .	46
2.3.2. Case with $\omega_S < \omega_p$ . . . . .	48
2.3.3. Case with $\omega_S > \omega_p$ . . . . .	48
2.3.4. Balanced case with $\omega_S = \omega_p$ . . . . .	49
2.4. Some technical approaches to realize MetaLines . . . . .	50
2.4.1. Context. . . . .	50
2.4.2. Discrete component approach . . . . .	51
2.4.3. Distributed or semi-lumped element approach in microstrip technology . . . . .	52
2.4.4. Distributed element approach in coplanar waveguide technology . . . . .	53
2.4.5. The resonant approach . . . . .	56
2.5. Toward tunability . . . . .	58
2.5.1. The dual-band behavior . . . . .	59
2.5.2. Mechanical agility . . . . .	59
2.5.3. CRLH line controlled with active components . . . . .	60
2.5.4. Ferroelectric agility . . . . .	60
2.5.5. Ferrimagnetic agility . . . . .	61
2.6. Conclusion . . . . .	63
2.7. Bibliography . . . . .	65
<b>Chapter 3. Metamaterials for Non-Radiative Microwave Functions and Antennas</b> . . . . .	67
Divitha SEETHARAMDOO and Bruno SAUVIAC	
3.1. Introduction . . . . .	67
3.2. Metamaterials for non-radiative applications . . . . .	68
3.2.1. Miniaturization . . . . .	68
3.2.2. Bandwidth improvement . . . . .	69
3.2.3. Dual band . . . . .	71
3.2.4. Zeroth-order resonator (ZOR) . . . . .	73
3.3. Metamaterials for antennas at microwave frequencies . . . . .	75
3.3.1. Antenna miniaturization . . . . .	76
3.3.2. Efficient electrically small antennas with metamaterials . . . . .	76
3.3.3. Patch antenna miniaturization considering metamaterial substrate . . . . .	78
3.3.4. Miniature metamaterial antennas: numerical and experimental attempts . . . . .	79

3.4. Conclusion. . . . .	83
3.5. Bibliography. . . . .	83
<b>Chapter 4. Toward New Prospects for Electromagnetic Compatibility . . .</b>	<b>87</b>
Divitha SEETHARAMDOO	
4.1. Introduction . . . . .	87
4.2. Electromagnetic compatibility. . . . .	88
4.2.1. Trends in the transport and telecommunication industries . . . . .	89
4.2.2. EMC challenges induced by recent industrial trends – metamaterials for EMC. . . . .	90
4.3. Electromagnetic shielding – potential of metamaterials. . . . .	91
4.3.1. Figures of merit for shielding configurations . . . . .	92
4.3.2. One-dimensional metamaterial shield . . . . .	93
4.4. Metamaterials for 3D shielded cavities – application to electromagnetic reverberation chambers. . . . .	95
4.4.1. General case of a 3D shielded cavity. . . . .	95
4.4.2. Concept of subwavelength cavities. . . . .	96
4.4.3. Design of a metamaterial surface of reflection coefficient with arbitrary phase. . . . .	97
4.4.4. Application of subwavelength metamaterial cavity to reverberation chambers for EMC tests . . . . .	102
4.5. Conclusion. . . . .	106
4.6. Bibliography. . . . .	107
<b>Chapter 5. Dissipative Loss in Resonant Metamaterials . . . . .</b>	<b>111</b>
Philippe TASSIN, Thomas KOSCHNY, and Costas M. SOUKOULIS	
5.1. Introduction . . . . .	111
5.2. What is the best conducting material?. . . . .	115
5.3. Optimize the geometry of meta-atoms . . . . .	122
5.3.1. Increase RLC inductance . . . . .	122
5.3.2. Geometric tailoring of corners and filling fraction . . . . .	124
5.3.3. Benefits from periodicity effects . . . . .	124
5.3.4. Suppress internal resonant currents in strongly coupled fishnets . . . . .	125
5.4. Use gain to offset the impact of dissipative loss . . . . .	126
5.4.1. Introduction. . . . .	126
5.4.2. Self-consistent simulations of loss compensation in metamaterials. . . . .	127
5.4.3. Experimental evidence for loss compensation in metamaterials . . . . .	128
5.5. Bibliography. . . . .	129
<b>Chapter 6. Transformation Optics and Antennas . . . . .</b>	<b>133</b>
André de LUSTRAC, Shah Nawaz BUROKUR and Paul-Henri TICHIT	
6.1. Transformation optics . . . . .	133
6.1.1. Principle . . . . .	133
6.1.2. First example: waveguide taper. . . . .	137

6.2. Applications to antennas . . . . .	144
6.2.1. Directive antenna . . . . .	144
6.2.2. Isotropic antenna . . . . .	155
6.3. Conclusions . . . . .	159
6.4. Acknowledgment . . . . .	159
6.5. Bibliography . . . . .	159
<b>Chapter 7. Metamaterials for Control of Surface Electromagnetic and Liquid Waves . . . . .</b>	<b>161</b>
Sébastien GUENNEAU, Mohamed FARHAT, Muamer KADIC, Stefan ENOCH and Romain QUIDANT	
7.1. Introduction . . . . .	161
7.1.1. Prehistory of acoustic metamaterials . . . . .	163
7.1.2. Correspondences between electromagnetic and acoustic metamaterials via locally resonant models. . . . .	166
7.2. Acoustic cloaking for liquid surface waves . . . . .	168
7.2.1. From Navier–Stokes to Helmholtz . . . . .	169
7.2.2. Effective anisotropic shear viscosity through homogenization . . . . .	171
7.2.3. Numerical analysis of LSW cloaking . . . . .	173
7.2.4. Experimental measurements of LSW cloaking. . . . .	175
7.3. Optical cloaking for surface plasmon polaritons . . . . .	177
7.3.1. Introduction to surface plasmon polaritons . . . . .	177
7.3.2. From transformational optics to plasmonics . . . . .	181
7.3.3. Numerical analysis of plasmonic cloaking . . . . .	183
7.3.4. Experimental measurements of plasmonic cloaking. . . . .	187
7.4. Concluding remarks on LSW and SPP cloaking . . . . .	190
7.5. Bibliography . . . . .	191
<b>Chapter 8. Classical Analog of Electromagnetically Induced Transparency . . . . .</b>	<b>195</b>
Philippe TASSIN, Thomas KOSCHNY and Costas M. SOUKOULIS	
8.1. Introduction . . . . .	195
8.2. Design of EIT metamaterials . . . . .	198
8.3. A simple model for EIT metamaterials – and electromagnetically induced absorption . . . . .	203
8.3.1. The two-oscillator model. . . . .	203
8.3.2. The radiating two-oscillator model . . . . .	205
8.4. Electromagnetically induced absorption. . . . .	207
8.5. EIT metamaterials for sensors . . . . .	209
8.6. EIT metamaterials for nonlinear and tunable operation . . . . .	211
8.7. Bibliography . . . . .	213
<b>List of Authors . . . . .</b>	<b>215</b>
<b>Index . . . . .</b>	<b>217</b>
