Foreword	xi
Chapter 1. For a Systemic and Transdisciplinary Approach to the Environment	1
André MONACO, Patrick PROUZET and Patrick VINCENT	
1.1. Introduction.	1
1.2. A complex and vulnerable ocean system	4
1.3. Suitable observation tools	9
1.3.1. For a systemic vision of the ocean	10
1.3.2. To assess our vulnerability to global change.	11
1.3.3. The contribution of operational oceanography.	13
1.3.4. New technologies applied to the living world	15
1.4. Conclusion	16
1.5. Acknowledgments	17
1.6. Bibliography	17
Chapter 2. Vulnerability to Global Change: Observation Strategies for the Marine Environment	19
Patrick FARCY, Gilles REVERDIN and Philippe BERTRAND	
2.1. Introduction.	19
2.2. Marine environment observation strategies	20
2.2.1. Parameters to measure	21
2.2.2. Measurement techniques with wide-ranging applications	25
2.3. Some large observation domains	28
2.3.1. The open sea.	28
2.3.2. The coastal and littoral ocean.	30
2.3.3. The ocean floor: substratum and population	36

2.4. Satellite contribution to observation strategies	42
2.5. <i>In situ</i> observation	45
2.5.1. Lagrangian measurements at the surface and in the water column	45
2.5.2. Eulerian measurements	56
2.5.3. Other significant parameters	60
2.6. Observation strategies.	64
2.6.1. The “observatory” approach	64
2.6.2. Some examples of the complementariness of the measurements taken by networks	66
2.6.3. What’s the point of modeling?	67
2.7. What next?	69
2.8. Bibliography	72
Chapter 3. Fishing Technology for Fisheries Research	75
Pascal LARNAUD and Benoit VINCENT	
3.1. Introduction.	75
3.2. The methods employed to measure selectivity	77
3.2.1. What is selectivity?	77
3.2.2. The tools employed to measure meshes.	79
3.2.3. The case of trawls.	81
3.2.4. Fishing nets and other gear	89
3.3. The tools and observation methods of fishing gear	94
3.3.1. Hydrodynamic tank test	95
3.3.2. Submarine video recording	99
3.3.3. Measurement tools in the domain of fishing technology	103
3.4. Computer simulation tools	104
3.5. Perspectives	108
3.6. Bibliography	109
Chapter 4. Acoustics to Detect and Measure Underwater Organisms	113
Verena TRENKEL, Aude PACINI and Laurent BERGER	
4.1. Introduction.	113
4.1.1. Physical principles of underwater acoustics	113
4.1.2. Instruments	117
4.2. How animals use acoustics.	120
4.2.1. Marine mammals	121
4.2.2. Fish	123
4.2.3. Other marine animals	124
4.3. How researchers use acoustics	124

4.3.1. Widening the observation scope	124
4.3.2. Describing animal behavior	126
4.3.3. Estimating fish abundance	128
4.3.4. Ecosystem indicators	130
4.3.5. Seafloor and benthic habitat characterization	131
4.3.6. Quantifying the impact of human activities on ecosystems	131
4.4. Practical uses of acoustics	132
4.4.1. Equipment	132
4.4.2. Carrying out a research cruise	135
4.4.3. Data processing	137
4.4.4. Advantages and drawbacks of acoustics	139
4.5. Acknowledgments	140
4.6. Bibliography	140
Chapter 5. “Bio-logging” as a Tool to Study and Monitor Marine Ecosystems, or How to Spy on Sea Creatures	143
Yann TREMBLAY and Sophie BERTRAND	
5.1. Introduction	143
5.2. The variety of sensors and measurements	144
5.2.1. Position measurements	144
5.2.2. Physiological measurements	147
5.2.3. Behavioral measurements	147
5.2.4. Environmental measurements	148
5.2.5. Presence measurements	149
5.3. Attachment methods: limits and ethics	150
5.4. Current challenges	152
5.5. Some examples of discoveries resulting from bio-logging	153
5.5.1. The marine field is huge, and yet...	153
5.5.2. To adjust, yes, but how?	154
5.5.3. Animals as oceanographers	156
5.5.4. The impact of oceanographic structures	156
5.5.5. Interactions with fisheries, their management and conservation	157
5.6. Conclusion	161
5.7. Bibliography	162

Chapter 6. Modeling Strategies for Ecosystems	175
Cédric BACHER and Nathalie NIQUIL	
6.1. Definition of mathematical modeling	175
6.1.1. Introduction	175
6.1.2. The main currents of ecological modeling	177
6.2. Mathematical formalization	178
6.2.1. State variables, process variables and the equation of state.	178
6.2.2. Functional responses	180
6.2.3. Simplified food web	187
6.3. Metabolic foundations of population dynamics.	192
6.3.1. Metabolic laws	192
6.3.2. Population and communities	197
6.4. Modeling complexity	199
6.4.1. Introduction	199
6.4.2. From NPZD to trophodynamic models	203
6.4.3. Static holistic models.	204
6.5. Conclusion	209
6.5.1. The ideal of end-to-end models.	209
6.5.2. To find out more	210
6.6. Acknowledgments	212
6.7. Bibliography	212
 Chapter 7. The Ecosystem Approach to Fisheries: Reconciling Conservation and Exploitation	 221
Philippe CURY, Arnaud BERTRAND, Sophie BERTRAND, Marta COLL, Philippe GROS, Souad KIFANI, François Le LOCH, Olivier MAURY, Frédéric MENARD, Florent RENAUD, Lynn SHANNON and Yunne-Jai SHIN	
7.1. The ecosystem approach to fisheries: a shared view on the management of marine resources.	221
7.1.1. The challenges of the ecosystem approach	221
7.1.2. Three bodies of the United Nations structure the ecosystem approach to global fisheries.	223
7.1.3. The complex matter of scientific issues supporting governance.	233
7.2. The way marine ecosystems work	236
7.2.1. Bottom-up, top-down and wasp-wait controls	236
7.2.2. Trophic relationships in marine ecosystems	248

7.3. EAF and research on marine ecosystems	256
7.3.1. Quantifying ecological interactions	256
7.3.2. Understanding spatial dynamics	258
7.3.3. Modeling as a tool to integrate knowledge	262
7.4. Ecological indicators Marine Strategy Framework Directive (MSFD)	271
7.4.1. Three current levels of organization: international, national and regional	273
7.4.2. The ecosystem approach of the MSFD	274
7.4.3. The assessment of food webs	275
7.5. Implementing the EAF: the Benguela and Humboldt examples	278
7.5.1. Benguela	278
7.5.2. The Humboldt	283
7.6. Dynamic approaches to the ecosystem management of fisheries	289
7.7. Bibliography	290
Chapter 8. Modeling in Contemporary Sciences: Efficiency and Limits Examples from Oceanography	313
Alain PAVÉ	
8.1. Introduction.	313
8.2. A language to describe reality	314
8.3. Relationships between models and reality	315
8.4. What about marine ecological systems and their management?	323
8.5. Interdisciplinarity, transdisciplinarity and modeling	329
8.5. Bibliography	332
List of Authors	337
Index	339
