Foreword	ix
André MARIOTTI and Jean-Charles POMEROL	
Chapter 1. Marine Biosphere, Carbonate Systems and the Carbon Cycle	1
Luc BEAUFORT	
1.1. Introduction	1
1.2. Marine organisms and carbon	3
1.3. Variability in the production of organic matter	4
1.4. From the biosphere to the atmosphere to climate	7
1.5. Carbonate production	9
1.5.1. Importance of biological carbonate production in the evolution of the planet	10
1.5.2. Carbonate compensation depth	12
1.5.3. Carbonates and climate	15
1.6. The coupling of carbonaceous and organic productions	16
1.7. Modification of equilibria and consequences on marine life	17
1.8. Conclusion	20
1.9. Bibliography	21
Chapter 2. Biodiversity of Phytoplankton: Responses to Environmental Changes in Coastal Zones	25
Tania HERNÁNDEZ-FARIÑAS and Cédric BACHER	
2.1. Introduction	25
2.2. Phytoplankton ecology	26
2.2.1. General characteristics	26
2.2.2. Lifecycle	28

2.2.3. Spatial distribution	32
2.2.4. Temporal variability and successions	33
2.2.5. Adaptive strategies	35
2.2.6. Functional diversity	40
2.2.7. Ecological niche	42
2.3. Phytoplankton responses to anthropogenic pressures	44
2.3.1. Main sources of anthropogenic variability	45
2.3.2. Responses with regard to biomass, abundance and species composition.	48
2.3.3. Changes in spatial distribution	54
2.3.4. Changes in phenology and amplitude of blooms	56
2.3.5. Size spectrum	59
2.4. Observation systems for the identification of phytoplankton	60
2.4.1. Detecting changes in time series	60
2.4.2. Taxonomic aggregation levels	63
2.5. Conclusion	65
2.6. Bibliography	66
Chapter 3. Marine Seagrasses (Magnoliophyta) in the Intertropical Zone	81
Christian HILY	
3.1. From plant to habitat	81
3.1.1. Taxonomy and morphology of marine magnoliophyta	81
3.1.2. Biogeography	85
3.1.3. The seagrass habitat	86
3.2. Role of seagrass beds in the coastal environment	87
3.3. Functioning of seagrass beds	89
3.3.1. Production and metabolism	89
3.3.2. Trophic network	90
3.4. Challenges in the conservation of seagrass beds	92
3.4.1. Rare and endangered species.	92
3.4.2. Specific role of seagrasses: ichthyofauna of coastal environments.	93
3.4.3. Services provided by seagrass beds to humans	95
3.5. Pressures on and threats to seagrasses	95
3.5.1. Cyclones	96
3.5.2. Emersion	96
3.5.3. Global climate change	96
3.5.4. Fishing	97
3.5.5. Boating and water sports	98
3.5.6. The extraction of sandy or coral materials	98

3.5.7. Amenities	98
3.5.8. Terrigenous effluents.	98
3.5.9. Harvesting	99
3.6. Restoration of seagrass beds	100
3.7. The functional role of seagrasses in the lagoon ecosystem	101
3.8. Conclusion	103
3.9. Bibliography	104
Chapter 4. Biocomplexity of Coral Ecosystems: Diversity in All its States	107
Michel KULBICKI, Mehdi ADJEROUD, Laure CARASSOU, Pascale CHABANET, Valeriano PARRAVICINI, Dominique PONTON, Fanny HOULBREQUE and Laurent VIGLIOLA	
4.1. Introduction.	107
4.2. Diversity in the coral world	111
4.2.1. Overview.	112
4.2.2. Diversity of the main constituents of coral reefs.	119
4.3. Links between diversities.	138
4.3.1. From local to regional	138
4.3.2. From species to function.	143
4.4. Conclusion	154
4.5. Bibliography	155
Chapter 5. Man and Diversity in the Coral Environment	165
Michel KULBICKI, Mehdi ADJEROUD, Laure CARASSOU, Pascale CHABANET, Valeriano PARRAVICINI, Dominique PONTON, Fanny HOULBREQUE and Laurent VIGLIOLA	
5.1. Introduction.	165
5.2. Diversity and ecological services	166
5.2.1. Main ecological services.	166
5.2.2. Diversity, robustness, resilience and disturbances.	180
5.3. Local versus global threats: what are local threats and what are their effects?	186
5.3.1. Eutrophication.	187
5.3.2. Pollution by chemical products and hydrocarbons	189
5.3.3. Impacts of coastal development	190
5.3.4. Coral diseases	191
5.4. What are the combined effects of local and global threats on corals?	192
5.5. Functions and diversity	194

5.5.1. What to protect?	194
5.5.2. Protection means	197
5.6. Conclusion	208
5.6.1. Reefs as a model?	208
5.6.2. Do coral reefs have a future?	209
5.7. Bibliography	210
Chapter 6. Hydrothermal Vents: Oases at Depth	225
Jozée SARRAZIN and Daniel DESBRUYÈRES	
6.1. Introduction to deep-sea ecosystems	225
6.2. Discovery of hydrothermal sources	228
6.3. Geology and geochemistry of hydrothermal systems	229
6.3.1. Formation of hydrothermal vents	229
6.3.2. Chemical composition of hydrothermal fluids	232
6.4. Microbial chemosynthesis	233
6.5. Symbioses and trophic chains	236
6.5.1. Symbioses	236
6.5.2. Trophic network	241
6.6. Distribution of fauna at different spatial scales	244
6.6.1. Ridges of the East Pacific	244
6.6.2. Ridges of the Northeast Pacific	245
6.6.3. Mid-Atlantic Ridge	246
6.6.4. Sites in the West Pacific	248
6.6.5. Ridges in the Indian Ocean	250
6.6.6. Ridges in the Southern Ocean	252
6.6.7. Cayman Ridge	253
6.6.8. Biogeography of deep hydrothermal vents	254
6.7. Faunal microdistribution and interactions	255
6.7.1. Environmental conditions	256
6.7.2. Biotic interactions	263
6.8. Temporal dynamics of hydrothermal ecosystems	265
6.8.1. Temporal studies associated with an eruption	266
6.8.2. Temporal studies of active sites	269
6.8.3. Deep-sea observatories	272
6.8.4. Dispersion of larvae and recruitment	273
6.9. Mineral resources and exploitation	275
6.10. Bibliography	279
List of Authors	293
Index	295
