

# Table of Contents

|   |       |
|---|-------|
| <b>Foreword</b> . . . . .   | xv    |
| <b>Notations</b> . . . . .  | xix   |
| <b>Acknowledgments</b> . . . . .  | xxiii |
| <b>Introduction</b> . . . . .   | xxv   |
| Laurent LUCAS, Céline LOSCOS and Yannick REMION                         |       |
| <b>PART 1. 3D ACQUISITION OF SCENES</b> . . . . .                       | 1     |
| <b>Chapter 1. Foundation</b> . . . . .                                  | 3     |
| Laurent LUCAS, Yannick REMION and Céline LOSCOS                         |       |
| 1.1. Introduction . . . . .   | 3     |
| 1.2. A short history . . . . .  | 5     |
| 1.2.1. The pinhole model . . . . .                                      | 6     |
| 1.2.2. Depth perception and binocular vision . . . . .                  | 11    |
| 1.2.3. Multiview systems . . . . .                                      | 13    |
| 1.3. Stereopsis and 3D physiological aspects . . . . .                  | 14    |
| 1.3.1. Psychophysical indices . . . . .                                 | 15    |
| 1.3.2. Monocular indices . . . . .                                      | 15    |
| 1.3.3. Ocular indices . . . . .   | 16    |
| 1.3.4. Binocular indices . . . . .                                      | 17    |
| 1.4. 3D computer vision . . . . .                                       | 17    |
| 1.5. Conclusion . . . . .   | 20    |
| 1.6. Bibliography . . . . .   | 20    |
| <b>Chapter 2. Digital Cameras: Definitions and Principles</b> . . . . . | 23    |
| Min H. KIM, Nicolas HAUTIERÈ and Céline LOSCOS                          |       |
| 2.1. Introduction . . . . .   | 23    |

|  |           |
|--|-----------|
| 2.2. Capturing light: physical fundamentals . . . . .                | 24        |
| 2.2.1. Radiometry and photometry . . . . .                           | 24        |
| 2.2.2. Wavelengths and color spaces . . . . .                        | 26        |
| 2.3. Digital camera . . . . .  | 28        |
| 2.3.1. Optical components . . . . .                                  | 28        |
| 2.3.2. Electrical components . . . . .                               | 30        |
| 2.3.3. Principal functions and their control . . . . .               | 31        |
| 2.3.4. Storage formats for images . . . . .                          | 32        |
| 2.4. Cameras, human vision and color . . . . .                       | 33        |
| 2.4.1. Adapting optics and electronics to human perception . . . . . | 33        |
| 2.4.2. Controlling color . . . . .                                   | 34        |
| 2.5. Improving current performance . . . . .                         | 35        |
| 2.5.1. HDR imaging . . . . .   | 35        |
| 2.5.2. Hyperspectral acquisition . . . . .                           | 37        |
| 2.6. Conclusion . . . . .  | 38        |
| 2.7. Bibliography . . . . .  | 38        |
| <b>Chapter 3. Multiview Acquisition Systems . . . . .</b>            | <b>43</b> |
| Frédéric DEVERNAY, Yves PUPULIN and Yannick REMION                   |           |
| 3.1. Introduction: what is a multiview acquisition system? . . . . . | 43        |
| 3.2. Binocular systems . . . . .                                     | 45        |
| 3.2.1. Technical description . . . . .                               | 45        |
| 3.2.2. Principal uses . . . . .                                      | 49        |
| 3.2.3. Related databases . . . . .                                   | 54        |
| 3.3. Lateral or directional multiview systems . . . . .              | 54        |
| 3.3.1. Technical description . . . . .                               | 54        |
| 3.3.2. Principal uses . . . . .                                      | 59        |
| 3.3.3. Related databases . . . . .                                   | 60        |
| 3.4. Global or omnidirectional multiview systems . . . . .           | 61        |
| 3.4.1. Technical description . . . . .                               | 61        |
| 3.4.2. Principal uses . . . . .                                      | 64        |
| 3.4.3. Related databases . . . . .                                   | 66        |
| 3.5. Conclusion . . . . .  | 66        |
| 3.6. Bibliography . . . . .  | 66        |
| <b>Chapter 4. Shooting and Viewing Geometries</b>                    |           |
| <b>in 3DTV . . . . .</b>   | <b>71</b> |
| Jessica PRÉVOTEAU, Laurent LUCAS and Yannick REMION                  |           |
| 4.1. Introduction . . . . .  | 71        |
| 4.2. The geometry of 3D viewing . . . . .                            | 72        |
| 4.2.1. Description . . . . .   | 72        |
| 4.2.2. Setting the parametric model . . . . .                        | 74        |
| 4.3. The geometry of 3D shooting . . . . .                           | 75        |
| 4.3.1. Choosing a convenient geometry . . . . .                      | 75        |
| 4.3.2. Setting the parametric model . . . . .                        | 78        |

|   |     |
|---|-----|
| 4.4. Geometric impact of the 3D workflow . . . . .                                    | 80  |
| 4.4.1. Rendered-to-shot space mapping . . . . .                                       | 80  |
| 4.4.2. 3D space distortion model . . . . .  | 82  |
| 4.5. Specification methodology for multiscopic shooting . . . . .                     | 84  |
| 4.5.1. Controlling depth distortion . . . . .   | 84  |
| 4.5.2. Accurate depth effect . . . . .  | 85  |
| 4.6. OpenGL implementation . . . . .  | 86  |
| 4.7. Conclusion . . . . .   | 87  |
| 4.8. Bibliography . . . . .   | 88  |
| <b>Chapter 5. Camera Calibration: Geometric and Colorimetric Correction</b> . . . . . | 91  |
| Vincent NOZICK and Jean-Baptiste THOMAS   |     |
| 5.1. Introduction . . . . .   | 91  |
| 5.2. Camera calibration . . . . .   | 91  |
| 5.2.1. Introduction . . . . .   | 91  |
| 5.2.2. Camera model . . . . .   | 92  |
| 5.2.3. Calibration using a sight . . . . .  | 93  |
| 5.2.4. Automatic methods . . . . .  | 94  |
| 5.3. Radial distortion . . . . .  | 95  |
| 5.3.1. Introduction . . . . .   | 95  |
| 5.3.2. When to correct distortion? . . . . .  | 96  |
| 5.3.3. Radial distortion correction models . . . . .                                  | 97  |
| 5.4. Image rectification . . . . .  | 98  |
| 5.4.1. Introduction . . . . .   | 98  |
| 5.4.2. Problems . . . . .   | 100 |
| 5.4.3. Image-based methods . . . . .  | 100 |
| 5.4.4. Camera-based methods . . . . .   | 101 |
| 5.4.5. Correcting more than two images simultaneously . . . . .                       | 102 |
| 5.5. Colorimetric considerations in cameras . . . . .                                 | 103 |
| 5.5.1. Elements of applied colorimetry . . . . .                                      | 103 |
| 5.5.2. Colorimetric calibration in cameras . . . . .                                  | 105 |
| 5.6. Conclusion . . . . .   | 109 |
| 5.7. Bibliography . . . . .   | 110 |
| <b>PART 2. DESCRIPTION/RECONSTRUCTION OF 3D SCENES</b> . . . . .                      | 113 |
| <b>Chapter 6. Feature Points Detection and Image Matching</b> . . . . .               | 115 |
| Michel DESVIGNES, Lara YOUNES and Barbara ROMANIUK                                    |     |
| 6.1. Introduction . . . . .   | 115 |
| 6.2. Feature points . . . . .   | 116 |
| 6.2.1. Point detection . . . . .  | 117 |
| 6.2.2. Edge-based feature points . . . . .  | 121 |
| 6.2.3. Stable regions: IBR and MSER . . . . .   | 122 |
| 6.3. Feature point descriptors . . . . .  | 123 |

|   |            |
|---|------------|
| 6.3.1. Scale-invariant feature transform . . . . .                                    | 124        |
| 6.3.2. Gradient Location and Orientation Histogram . . . . .                          | 125        |
| 6.3.3. The DAISY descriptor . . . . .   | 125        |
| 6.3.4. Speeded-Up Robust Features (SURF) . . . . .                                    | 126        |
| 6.3.5. Multi-scale Oriented Patches (MOPS) . . . . .                                  | 127        |
| 6.3.6. Shape context . . . . .  | 127        |
| 6.4. Image matching . . . . .   | 128        |
| 6.4.1. Descriptor matching . . . . .  | 128        |
| 6.4.2. Correspondence group detection . . . . .                                       | 129        |
| 6.5. Conclusion . . . . .   | 131        |
| 6.6. Bibliography . . . . .   | 132        |
| <b>Chapter 7. Multi- and Stereoscopic Matching,<br/>Depth and Disparity . . . . .</b> | <b>137</b> |
| Stéphanie PRÉVOST, Cédric NIQUIN, Sylvie CHAMBON and<br>Guillaume GALES               |            |
| 7.1. Introduction . . . . .   | 137        |
| 7.2. Difficulties, primitives and stereoscopic matching . . . . .                     | 138        |
| 7.2.1. Difficulties . . . . .   | 138        |
| 7.2.2. Primitives and density . . . . .   | 139        |
| 7.3. Simplified geometry and disparity . . . . .                                      | 139        |
| 7.4. A description of stereoscopic and multiscope methods . . . . .                   | 141        |
| 7.4.1. Local and global matching algorithms . . . . .                                 | 141        |
| 7.4.2. Principal constraints . . . . .  | 144        |
| 7.4.3. Energy costs . . . . .   | 145        |
| 7.5. Methods for explicitly accounting for occlusions . . . . .                       | 147        |
| 7.5.1. A local stereoscopic method – seeds propagation . . . . .                      | 147        |
| 7.5.2. A global multiscope method . . . . .   | 150        |
| 7.6. Conclusion . . . . .   | 153        |
| 7.7. Bibliography . . . . .   | 154        |
| <b>Chapter 8. 3D Scene Reconstruction and Structuring . . . . .</b>                   | <b>157</b> |
| Ludovic BLACHE, Muhannad ISMAEL and Philippe SOUCHET                                  |            |
| 8.1. Problems and challenges . . . . .  | 157        |
| 8.2. Silhouette-based reconstruction . . . . .  | 158        |
| 8.2.1. Silhouette extraction methods . . . . .  | 159        |
| 8.2.2. Reconstruction methods . . . . .   | 159        |
| 8.2.3. Improving volume reconstruction . . . . .                                      | 160        |
| 8.3. Industrial application . . . . .   | 162        |
| 8.3.1. Hardware acceleration . . . . .  | 162        |
| 8.3.2. Results . . . . .  | 164        |
| 8.4. Temporally structuring reconstructions . . . . .                                 | 166        |
| 8.4.1. Generalized skeletal extraction . . . . .                                      | 168        |
| 8.4.2. Calculating displacement fields . . . . .                                      | 169        |
| 8.5. Conclusion . . . . .   | 170        |
| 8.6. Bibliography . . . . .   | 171        |

|  |         |
|--|---------|
| <b>Chapter 9. Synthesizing Intermediary Viewpoints</b> . . . . .                         | 173     |
| Luce MORIN, Olivier LE MEUR, Christine GUILLEMOT,<br>Vincent JANTET and Josselin GAUTIER |         |
| 9.1. Introduction . . . . .  | 173     |
| 9.2. Viewpoint synthesis by interpolation and extrapolation . . . . .                    | 173     |
| 9.2.1. Direct and inverse projections . . . . .  | 174     |
| 9.2.2. Reducing distortions in viewpoint synthesis . . . . .                             | 176     |
| 9.2.3. Viewpoint interpolation . . . . .   | 178     |
| 9.3. Inpainting uncovered zones . . . . .  | 181     |
| 9.3.1. Overview of 2D inpainting techniques . . . . .                                    | 181     |
| 9.3.2. 3D Inpainting . . . . .   | 186     |
| 9.4. Conclusion . . . . .  | 189     |
| 9.5. Bibliography . . . . .  | 189     |
| <br><b>PART 3. STANDARDS AND COMPRESSION OF 3D VIDEO</b> . . . . .                       | <br>193 |
| <br><b>Chapter 10. Multiview Video Coding (MVC)</b> . . . . .                            | <br>195 |
| Benjamin BATTIN, Philippe VAUTROT, Marco CAGNAZZO and<br>Frédéric DUFAUX                 |         |
| 10.1. Introduction . . . . .   | 195     |
| 10.2. Specific approaches to stereoscopy . . . . .                                       | 196     |
| 10.2.1. Formats . . . . .  | 196     |
| 10.2.2. Associated coding techniques . . . . .   | 199     |
| 10.3. Multiview approaches . . . . .   | 202     |
| 10.3.1. Formats . . . . .  | 202     |
| 10.3.2. Associated coding techniques . . . . .   | 205     |
| 10.4. Conclusion . . . . .   | 207     |
| 10.5. Bibliography . . . . .   | 208     |
| <br><b>Chapter 11. 3D Mesh Compression</b> . . . . .                                     | <br>211 |
| Florent DUPONT, Guillaume LAVOUÉ and Marc ANTONINI                                       |         |
| 11.1. Introduction . . . . .   | 211     |
| 11.2. Compression basics: rate-distortion trade-off . . . . .                            | 212     |
| 11.3. Multiresolution coding of surface meshes . . . . .                                 | 213     |
| 11.4. Topological and progressive coding . . . . .                                       | 215     |
| 11.4.1. Monoresolution compression . . . . .   | 215     |
| 11.4.2. Multiresolution compression . . . . .  | 216     |
| 11.5. Mesh sequence compression . . . . .  | 218     |
| 11.5.1. Definitions . . . . .  | 218     |
| 11.5.2. Methods using spatio-temporal prediction . . . . .                               | 219     |
| 11.5.3. Methods with prior segmentation . . . . .  | 220     |
| 11.5.4. Transform-based methods . . . . .  | 220     |
| 11.6. Quality evaluation: classic and perceptual metrics . . . . .                       | 221     |
| 11.6.1. Classic metrics . . . . .  | 221     |
| 11.6.2. Perceptual metrics . . . . .   | 222     |

|  |            |
|--|------------|
| 11.7. Conclusion . . . . .   | 223        |
| 11.8. Bibliography . . . . .   | 224        |
| <b>Chapter 12. Coding Methods for Depth Videos . . . . .</b>                           | <b>229</b> |
| Elie Gabriel MORA, Joël JUNG, Béatrice PESQUET-POPESCU and Marco CAGNAZZO              |            |
| 12.1. Introduction . . . . .   | 229        |
| 12.2. Analyzing the characteristics of a depth map . . . . .                           | 231        |
| 12.3. Depth coding methods . . . . .   | 232        |
| 12.3.1. Methods using the intrinsic characteristics of depth maps . . . . .            | 232        |
| 12.3.2. Methods exploiting correlation with associated textures . . . . .              | 237        |
| 12.3.3. Methods optimizing depth coding for the quality of synthesized views . . . . . | 241        |
| 12.4. Conclusion . . . . .   | 245        |
