<b>FOREWORD</b> . . . . .	ix
<b>CHAPTER 1. OCEAN, BIODIVERSITY AND RESOURCES</b> . . . . .	1
Gilles BOEUF	
1.1. The history of life in the oceans . . . . .	1
1.2. Specifics of marine biodiversity . . . . .	6
1.3. Renewable living resources . . . . .	9
1.3.1. Fisheries . . . . .	10
1.3.2. Aquaculture . . . . .	12
1.4. Ocean and public health . . . . .	21
1.5. Research of molecules of interest of marine origin . . . . .	22
1.6. Research in marine models (regarding their originality and specificity) . . . . .	24
1.7. Conclusion . . . . .	30
1.8. Bibliography . . . . .	32
<b>CHAPTER 2. PELAGIC MARINE ECOSYSTEMS AND BIOGEOCHEMICAL CYCLES</b> . . . . .	37
Louis LEGENDRE	
2.1. Introduction . . . . .	37
2.1.1. Ocean dynamics: surface and deep circulation . . . . .	37
2.2. Marine pelagic ecosystems: from viruses to whales . . . . .	42
2.2.1. Different points of view on marine pelagic ecosystems . . . . .	42
2.2.2. Main types of planktonic marine ecosystems . . . . .	43

---

2.3. Pelagic ecosystems and biogeochemical cycles: inseparable . . . . .	46
2.3.1. Dissolved inorganic nutrients . . . . .	47
2.3.2. Dissolved gases . . . . .	49
2.3.3. Particulate inorganic carbon . . . . .	53
2.3.4. Dissolved organic carbon. . . . .	56
2.3.5. Particulate organic carbon . . . . .	60
2.4. The ocean in the rescue of the planet: carbon pumping and sequestration . . . . .	66
2.4.1. Carbon pumps and carbon sequestration in the ocean . . . . .	66
2.4.2. The four ocean carbon pumps . . . . .	67
2.5. Biogeochemical equilibria, ecosystems and human societies: danger! . . . . .	72
2.6. Bibliography. . . . .	74
<b>CHAPTER 3. INDICATORS . . . . .</b>	<b>77</b>
Marie-Joëlle ROCHET and Verena TRENKEL	
3.1. Introduction . . . . .	77
3.2. Approach. . . . .	79
3.2.1. Context: managing human activities in marine ecosystems . . . . .	79
3.2.2. Why do we need indicators? . . . . .	81
3.2.3. Formalizing an indicator framework . . . . .	82
3.3. Selecting indicators. . . . .	85
3.3.1. Matching indicators with objectives . . . . .	85
3.3.2. Criteria. . . . .	85
3.3.3. Selecting indicator suites . . . . .	87
3.3.4. Indicator lists . . . . .	88
3.3.5. Illustrations . . . . .	88
3.4. From indicators to ecosystem assessment . . . . .	90
3.4.1. Reference points, states and direction and management objectives . . . . .	91
3.4.2. Using knowledge and data to define reference points . . . . .	92
3.4.3. Reference points and indicator suites. . . . .	94
3.4.4. Reference domains and reference directions . . . . .	94
3.4.5. Integrated assessment . . . . .	95
3.5. Giving advice . . . . .	100

3.6. Indicators in practice . . . . .	101
3.6.1. Monitoring program . . . . .	102
3.6.2. Calculation of indicators and their trends . . . . .	105
3.7. A summary by way of conclusion . . . . .	106
3.8. Acknowledgments . . . . .	107
3.9. Bibliography . . . . .	107
<b>CHAPTER 4. THE IMPACT OF GLOBAL CHANGE ON THE DYNAMICS OF MARINE LIVING RESOURCES . . . . .</b>	<b>113</b>
Philippe GROS and Patrick PROUZET	
4.1. Fisheries, aquaculture and food supply . . . . .	113
4.1.1. Introduction . . . . .	113
4.1.2. Overview of the world aquatic animal food supply . . . . .	114
4.1.3. A combination of diverse issues and contexts . . . . .	120
4.1.4. Climate change impacts on fishery resources . . . . .	132
4.2. From exploited populations ecology knowledge to fisheries management . . . . .	140
4.2.1. From observations to modeling hypothesis . . . . .	140
4.2.2. From the model to ecological concepts . . . . .	146
4.2.3. Three examples of “demographic strategies” . . . . .	148
4.2.4. Basic concepts for fishery management . . . . .	155
4.3. From concepts to reality: management and governance . . . . .	162
4.3.1. Representation of stock-fleet interactions – management objectives . . . . .	162
4.3.2. The dual overcapacity-overexploitation crisis: fisheries faced with the “tragedy of the commons” . . . . .	164
4.3.3. The convergence of sector-specific maritime and environmental politics . . . . .	169
4.3.4. The progressive emergence of the ecosystem approach to fisheries (EAF) . . . . .	172
4.4. From EAF to the systemic approach: working toward a better regulation for the usages of marine biodiversity . . . . .	174

4.4.1. Diadromous fish, under many combined forms of pressure . . . . .	174
4.4.2. In favor of a systems approach . . . . .	181
4.5. Appendix . . . . .	184
4.5.1. Stock assessment models: period 1950–1970 . . . . .	184
4.5.2. Structured models of population dynamics . . . . .	190
4.6. Bibliography . . . . .	194
<b>LIST OF AUTHORS . . . . .</b>	<b>213</b>
<b>INDEX. . . . .</b>	<b>215</b>
