Introduction	xi
Chapter 1. Bioenergy Chain and Process Scales	1
1.1. Biomass production and ecological issues	1
1.2. Modeling of bioenergy chains	3
1.2.1. Global model of the whole bioenergy chain	3
1.2.2. Model of a gasification plant	7
1.2.3. Models of biorefinery sections	10
1.3. Technical–economical analysis of bioenergy chains	15
1.3.1. Technical–economical analysis of power production	15
1.3.2. Technical–economical analysis of heat production	18
1.4. Life-cycle and multicriteria assessment of bioenergy chains	20
1.4.1. Methodology of life-cycle assessment applied to bioenergy routes	20
1.4.2. Life-cycle assessment of heat production from biomass	21
1.4.3. Various aspects of the bioenergy chain	24
1.4.4. An example of a multicriteria discussion on a bioenergy route: the sequestration of biochar to mitigate climate change	25
Chapter 2. Reactor Scale	29
2.1. Introduction about the reactions occurring in biomass thermochemical reactors	29
2.2. Reactors for biomass combustion	32
2.2.1. Basics of biomass composition, drying and combustion	32
2.2.2. Technologies of biomass combustion	35

2.3. Reactors for biomass gasification	38
2.3.1. Main applications for syngas produced from biomass gasification	38
2.3.2. Different type of reactors for biomass gasification.	39
2.3.3. Purification and valorization of syngas	44
2.3.4. Detailed modeling of a dual fluidized-bed gasifier.	47
2.3.5. Methodology for modeling tar formation and conversion in a fluidized-bed reactor.	50
2.4. Reactors for biomass pyrolysis	51
2.4.1. Wood torrefaction	51
2.4.2. Char uses and production	52
2.4.3. Pyrolysis bio-oils uses and production	56
2.5. Reactors for biomass liquefaction	62
Chapter 3. Particle Scale and Mesoscale	67
3.1. Introduction on the main mechanisms occurring during wood pyrolysis	67
3.2. Physical–chemical mechanism of pyrolysis at the particle scale	68
3.2.1. Main characteristic times of phenomena occurring during pyrolysis	68
3.2.2. Modeling intraparticle mechanisms of biomass pyrolysis.	71
3.2.3. Heat of biomass pyrolysis studied by calorimetry	74
3.3. Evolution of polymer network in biomass at the mesoscale	78
3.3.1. In situ analysis by ^1H NMR.	78
3.3.2. In situ analysis by rheology.	82
3.3.3. Relations between ^1H NMR and rheology analysis	87
3.4. Structure of a char particle and mechanisms of its oxidation	89
Chapter 4. Molecular Scale	93
4.1. Introduction on the variability of biomass composition and the decoupling of reactions	93
4.2. Chemical structure of lignocellulosic biomass	94
4.3. Chemical mechanisms of primary pyrolysis	96
4.3.1. Chemical mechanism of cellulose pyrolysis	96
4.3.2. Chemical mechanism of hemicellulose pyrolysis.	98
4.3.3. Chemical mechanism of lignin pyrolysis	98
4.3.4. Analysis of biomass primary tar by online soft photoionization	100

4.3.5. Analysis of bio-oils by high-resolution mass spectrometry and GC*GC/MS-FID	101
4.3.6. Analysis of biomass and biochar by solid-state nuclear magnetic resonance	103
4.4. Molecular mechanisms of gas-phase reactions	109
4.4.1. Introduction	109
4.4.2. Gas-phase conversion of model compounds	110
4.4.3. Gas-phase conversion of real primary tar	112
4.4.4. Gas-phase conversion of methane in a syngas	116
4.5. Molecular mechanisms of catalytic reactions	117
4.5.1. Catalytic fast pyrolysis of biomass	117
4.5.2. Catalytic reforming of tar to produce a syngas	119
4.5.3. Catalytic hydrodeoxygenation of bio-oils	122
Conclusion	135
Bibliography	139
Index	157
