Foreword	ix
Preface	xiii
List of Symbols	xix
Part 1. Fundamentals	1
Chapter 1. Characteristics of Failure in Geomaterials	3
1.1. Description of failure	3
1.2. A definition for failure	7
1.3. Failure as an unstable bifurcation with loss of uniqueness	11
1.3.1. Failure as a bifurcation phenomenon	11
1.3.2. Failure as an instability	12
1.3.3. Failure as a loss of uniqueness	15
1.4. Failure patterns	16
Chapter 2. Failure in Continuum Geomechanics	23
2.1. Some generalities in continuum mechanics for material systems	23
2.2. The link between the kinetic energy and the second-order work	26

2.3. The second-order work in Eulerian formalism	30
2.4. The second-order work at the material point scale	32
2.5. The case of homogeneous material specimens	33
Chapter 3. The Second-Order Work Criterion	43
3.1. Second-order work and associated quadratic form	43
3.2. Control parameters and generalized constitutive matrix	44
3.2.1. Proportional strain loading path	47
3.2.2. n -Proportional strain loading path	49
3.3. The fundamental role of \mathbf{K}^s	53
3.4. Conclusions	57
3.5. Appendices	58
3.5.1. Appendix A	58
3.5.2. Appendix B	59
Chapter 4. Numerical and Experimental Investigations of Bifurcations	63
4.1. Essentials of second-order work criterion	63
4.2. Discrete computations of failure	65
4.2.1. Instability cones	67
4.2.2. Effective failure	70
4.3. Topology of instability cones	75
4.3.1. 3D instability cones	75
4.4. Experimental support for bifurcation	81
4.4.1. Instability in CU test on loose Hostun sand	82
4.4.2. Constant drained shear (CSD) test on loose Hostun sand	83
Chapter 5. Hierarchy of Failure Modes	89
5.1. Introduction	90
5.2. Diffuse and localized failure indicators	93
5.3. Rice localization criterion	94
5.4. Rice's localization criterion and second-order work vanishing	97
5.5. Localized and diffuse failures via discrete element approach	99

5.6. Localized and diffuse failures via continuous approaches	110
5.6.1. Localized failure (dense sand)	110
5.6.2. Uniform initial density field	110
5.6.3. Non-uniform initial density field	117
5.6.4. Diffuse failure (loose sand)	117
Part 2. Applications	125
Chapter 6. Second-Order Work in Boundary Value Problems	127
6.1. Global second-order work	127
6.1.1. Definition of global second-order work	128
6.1.2. Validation of normalized global second-order work	131
6.2. Spectral analysis of global tangent stiffness matrix	134
6.2.1. The case of homogeneous drained triaxial test	135
6.3. Shallow foundation as a benchmark problem	140
Chapter 7. Engineering Applications	145
7.1. Stability analysis of a soil-nailed wall	145
7.2. Stability analysis of Petacciato (Italy) landslide	155
7.3. Thermo-hydro-mechanical failure analysis of oil sand reservoirs	161
7.3.1. Laboratory investigation: strain localization modeling	162
7.3.2. Numerical modeling of SAGD process in oil sand reservoirs	164
7.3.3. Plastic strains and strain localization	166
Chapter 8. Soil Erosion as an Instability Problem	173
8.1. Introduction	173
8.1.1. Micromechanical modeling	174
8.2. Modeling the erosion process	175

8.2.1. Impact of erosion on soil behavior	177
8.2.2. Instability and diffuse failure in eroded soils	180
8.3. Closing remarks	189
Bibliography	191
Index	201
